Jafnapatam, seaport of Ceylon, whence are exported great quantities of tobacco, and some elephants, which are accounted the most docile of any in the world. The Dutch took it from the Portuguese in 1658; and it was taken by the English in 1795. It stands at the N end of the island, 100 miles N of Candy. Lon. 80 10 E, lat. 9 45 N.

Jaffrey, post town in Cheshire county, New Hampshire, lying near the boundary line between this State and Massachusetts, about 70 miles SW of Portsmouth, and 25 eastward of Connecticut river. Population 1820, 1339. Great Monadnock mountain is in this township.

Jagarnaut, town of Hindoostan, in the province of Orissa. Here is a famous pagoda, one of the first objects of Hindoo veneration, and an excellent seamark. It stands on the bay of Bengal, 48 miles S of Cattack. *Lon. 86 6 E, lat. 19 50 N.

Jagerndorf, town and castle of Silesia, capital of a province of the same name; seated on the Oppa, 13 miles NW of Trappan. Lon. 17 44 E, lat. 50 0 N.

Jaghire, district of Hindoostan, in the Carnatic, subject to the English East India Company. It extends 101 miles along the coast, from Alemparve on the S, to Lake Pullicate on the N, and is 47 miles inland in the widest part. Madras is the chief place.

Jago, St. largest and most fertile of the Cape Verd Islands, 10 miles long and five broad. It abounds with high barren mountains; and the air, in the rainy season, is unwholesome to strangers. The animals are bees, horses, asses, mules, deer, goats, hogs, civet-cats and monkeys. Here are fowls and birds of almost all sorts; and maize, plantains, bananas, pom-pions, oranges, lemons, tamarinds, pinc-apples, cocoa-nuts, guavas, tar, apples and sugar-canes. It has also some cedar-trees, and plenty of cotton. Ribeira Grande is the capital, but the governor resides at Porto Praya.

Jago, St. capital of Chili, and a bishop's see, with a good harbour, and a royal audience. Beside the cathedral, there are three parish churches, and eight monasteries. The inhabitants, about 40,000, are native Americans and Spaniards. Here are several canals, and a dyke, by means of which they water the gardens and cool the streets. It is seated in a beautiful plain, at the foot of the Andes, on the river Mapocho. Lon. 71 45 W, lat. 34 10 S.

Jago de Cuba, St. formerly capital of the island of Cuba. Lon. W C 1 28 E, lat. 20 15 N.

Jamaica, island of the West Indies. dis-

covered by Columbus, in 1494. It lies 30 leagues W of St. Domingo, nearly the same distance S of Cuba, and is of an oval figure, 170 miles long and 60 broad, containing 4,080,000 acres. A ridge of hills runs lengthwise from E to W, whence numerous rivers take their rise on both sides; and though none of them are navigable, even for barges, yet the sugars are carried upon many of them in canoes, from the remote plantations to the seaside; some of them run under ground for a considerable space, particularly the Cobre and Pedra. The year is distinguished into two seasons, the wet and dry; but the rains are not so frequent as formerly, which is supposed to be owing to the cutting down of the woods. About nine in the morning it is so intolerably hot, that it would be difficult to live, if the easterly breeze did not arise to cool the air. Sometimes the nights are pretty cool, and there are great dews, which are deemed unwholesome, especially to new comers. The months of July, August and September, are called the hurricane months, because then they are the most frequent; and there is lightning almost every night. The central mountains of Jamaica rise in some of their peaks to 7430 feet above the level of the Ocean. The seasons partake of the variety of elevation. The southern slope of the island spreads into immense plains, generally covered with sugar cane. The whole cultivated surface of the island, amounts to about 1,000,000 of acres. The government of Jamaica is a true British colonial establishment, vested in a governor, appointed and only amenable to the crown; a council composed of 12 members whose powers emanate from the same source with those of the governor; and a house of assembly composed of 43 members who are elected by, and represent the freeholders.

The general produce of this island is sugar, rum, molasses, ginger, cotton, indigo, pimenta, cocoa, coffee, several kinds of woods, and medicinal drugs. It has some tobacco, but not good, and used only by the negroes, who can scarcely live without it; also maize, Guinea corn, and peas of various kinds, with variety of roots. Fruits are in great plenty, such as oranges, lemons, shaddocks, citrons, pomegranates, pine-apples, prickly pears, melons, pompions, guavas and many other sorts. The principal town is Kingston; but St. Jago de la Vega, or Spanish town, is the seat of government. Progressive population of Jamaica.

James city, post town, Madison county, Virginia.

James, island on the coast of South Carolina, between Stono river, and Charleston harbour.

James Island, island of Africa, 30 miles up the river Gambia, and three miles from its nearest shore. Here the English have a fort and factory. Lon. 16 0 W, lat. 13 15 N.

James Town, ancient town in James City county, Virginia, planted as early as 1607, and made the seat of colonial government; it is situated on the N bank of James river, in lat. 37 9 N, and lon. 74 10 W, at the distance of eight miles S from Williamsburg, and 32 SE from Richmond. It is now in ruins.

James river, river of Virginia, is formed from two branches, Jacksons river, and Cowpasture river, both rising in Bath and Pendleton counties, and uniting in the northern angle of Bottetourt county. It thence flows by comparative course SSE 35 miles to Patonsburg, where it turns to ENE 20 miles to the foot of the Blue ridge, in Rockbridge county, and receiving from the north a large accession of water, by the Great Calpasture river, turns to SE and pierces the mountain, at lat. 37 35, and lon. W C 2 30 W. From its passage through the Blue Ridge, this noble stream, with many partial windings, but a general comparative course of a little south of east, 270 miles unites with Chesapeak bay between Old Point Comfort and Lynhaven bay. Its mouth between Hampton and the mouths of Elizabeth and Nansemond rivers, is known by the name of Hampton Roads.

The tide flows up James river to the first falls at Richmond. Ships of the line of the largest class can enter its mouth. Vessels of 40 guns can be navigated to James town, and those of 250 tons to Warwick, smaller vessels of 125 or 150 tons ascend to Rockets about one mile below Richmond. A canal cut around the falls or rapids, opens a boat navigation 230 miles still higher.

The Board of Public Works in Virginia, have given many statements of the utility, and suggested the practicability of a canal connexion between James and Ohio rivers. In order to enable the reader to form his own opinion on this interesting subject, from correct data, the following geographical notice and table are subjoined. It will be perceived from the table, that to connect James and Kenhawa rivers, two routes are proposed; one by Jacksons and Greenbriar rivers; and another by Craigs creek branch of James river, and by Sinking creek branch of Kenhawa.

Mr. Briggs, in a communication to the board of works, through Mr. Peyton, its secretary, has given the general levels of

the sources of Craig's creek, that branch of James river which interlocks with Sinking creek branch of Kenhawa, in the great valley SW of the Blue Ridge. These elements are of the utmost consequence in forming a correct idea of the country over which canals are designed to be drawn, to unite James and Kenhawa rivers. The following short geographical description will serve to inform the reader of the locality of the two creeks so particularly noticed in the annexed table.

Craig's creek is formed by two branches, John's creek, and Craig's creek proper, both rising in Giles county, in Virginia, at N lat. 37 20 and S 30 W lon. from W C. Both branches flow northeast into Botetourt county, in which they unite, and fall into James river, about 15 miles below the junction of Jackson's and Cowpastures rivers, after a comparative course of 40 miles.

Sinking creek rises between Pond and Walker's mountains, and between John's and Craig's creeks, in Giles county, flows southwest 25 miles, and falls into Great Kenhawa, at N lat. 37 17, and W lon. 3 42 from W C.

Jamestown, township of Newport county, Long Island, embracing and commensurate with Convenient island. Population in 1820, 448. Beaver tail lighthouse is at the S end of the island.

Jamestown, town of Chatauque county, New York. Population in 1820, uncertain.

Jamestown, post town, Prince Edward county, Virginia.

Jamestown, small town or village, in Silver creek township, Green county, Ohio, containing one store.

Jamestown, borough of Ireland, in the county of Leitrim, seated on the Shannon, five miles S by E of Carrick, and 73 NW of Dublin. Lon. 8 29 W, lat. 53 51 N.

Jamestown, town of Barbadoes, in the W side of the island.

Jamesville, post village in Manlius township, Onondago county, New York, 4 miles E from Onondago Hollow.

Jamesville, post village, Clarendon district, South Carolina.

Jamtland, province of Sweden, bordering on Norway, nearly of a circular form, about 70 miles in length, and 60 in breadth, annexed to the crown of Sweden by the treaty of Roschild, in 1658. It is in general mountainous. The eastern part is a champaign country, watered with several lakes and rivers, which abound with fish. The country produces excellent oats, and abounds in good turnips. It contains alum quarries, sandstone, slate, the lapis ollarius, fine rock crystals, lead ore, two new built copper-works, and a place where salt-petre is refined. The inhabitants subsist by agriculture, grazing, hunting, and fishing. They also carry on a considerable trade with the Norwegians.

Janeiro, province of Brazil, bounded by the Atlantic Ocean E, SE, and S; St. Paul's SW, and Minas Geraes NW. Length 380; mean width 100, and area 380,000 square miles. The tropical latitude and exposure to the Atlantic Ocean, renders this fine province capable of producing most of the vegetable staples of highest value. Sugar is its chief production. Janeiro is its capital city.

Janeiro, Rio De, city of Brazil, and capital of the province of the same name, stands at the head of a large bay or basin,

surrounded by lofty mountains. The opening of the harbor to the Ocean is about one mile wide, and is defended by fort Santa Cruz, built upon an immense mass of granitic rocks. The city rises like the steps or seats in an amphitheatre, and the houses built of stone along straight and well paved streets, produces a fine effect from the water. It is the mart of an immense and increasing inland trade. Population above 100,000. Lon. W C 35 E. Lat. 22 56 S.

Janna, province of Turkey in Europe, bounded on the N by Macedonia, on the S by Livadia, on the W by Albania, and on the E by Archipelago. It is the Thes-saly of the ancients, and Larissa is the capital.

Janna, town of Turkey in Europe, in a province of the same name. It is 62 miles W of Larissa. Lon. 21 36 E, lat. 39 48 N.

Janikale, *Janikaleh*, or *Jenikale*, town, seaport, and fortress of Russia, in Taurida, and in the straits of Taman. It commands the passage from the Euxine, or Black Sea, into the sea of Azoph. Lon. 36 25 E, lat. 45 21 N.

Janowitz, town of Bohemia, in the circle of Kaushim, famous for a battle between the Swedes and Imperialists in 1645, when the latter were defeated. It is 48 miles SE of Prague. Lon. 15 38 E, lat. 49 45 N.

Jao-tcheou-fou, city of China, in the province of Kiang-si, seated on the river Po, which, at a small distance, enters the lake Po-yang.

Japan Islands, of Asia, between 30 and 40 N lat. and between 130 and 144 E lon. the largest of which is called Japan, and sometimes Nippon, and gives its name to all the rest, being 600 miles in length, and from 100 to 150 in breadth. Its capital is Jeddo. The second island in magnitude is called Sacock, or more correctly Sikokf, and separated from the former only by a very narrow channel. It is about 500 miles in circuit, and its capital is called Bougo.—The third in magnitude is called Kiusu and these are surrounded by a great number of smaller. The whole group averages about 90,000 square miles and is peopled by at least 30,000,000 of inhabitants. It is the most exclusive and detached of all the civilized nations of the world. Much has been said, and it is probable little correctly understood in Europe respecting the government, religion, internal policy, and manners of this great nation. A secular and Hierarchical emperor have been named, presenting a striking resemblance to Europe during the middle ages, and to Mahometan Asia, during the decline of the Califate, and affording a similar intricacy to bewilder, and perplex foreigners, and fill their observations with fable and absurdity.

According to Galowain the latest European authority, the Japanese are remarkable for, order, intelligence and temperance and the country for its culture, and neat appearance. A prudent jealousy of Europeans has saved Japan from the fate of Hindoostan, and mortifications of China. The country produces in itself nearly all the luxuries and all the necessities of human life.

Japara, seaport on the N coast of the island of Java, with a good harbour. It was the capital of a considerable kingdom, till the Dutch made themselves masters of it; and now they have a colony here, and a considerable trade. It is 253 miles E by S of Batavia. Lon. 110 45 E, lat. 6 20 S.

Jaquemel, town of St. Domingo, on a bay of its name, on the S coast, 32 miles SSW of Port au Prince. See *Jacquemel*.

Jagues, river of the United States, falls into Missouri from the N about lat. 43 N.

Jargeau, town of France, in the department of Loiret. It was taken by the English in 1438, and retaken by Joan of Arc the next year. It is seated near the Loire, 10 miles ESE of Orleans.

Jarisberg, town of Norway, capital of a district abounding in mines, in the diocese of Aggerhuys, five miles N of Tonsberg.

Jarnac, town of France, in the department of Charente. Near this place the duke of Anjou, afterward Henry III., obtained a victory over the Huguenots, in 1569. It is seated on the Charente, 20 miles W of Angoulesme.

Jaromitz, town of Bohemia, seated on the Elbe, nine miles N of Koniggratz.

Jaron, town of Persia, in Parsistan, celebrated for abundance of palm-trees and their excellent fruit. It is 95 miles S by E of Shiras. Lon. 53 10 E, lat. 28 15 N.

Jaroslaw, town of Poland, in Red Russia, with a strong citadel. A battle was gained here by the Swedes, in 1656, after which they took the town. It is included in the kingdom of Galicia, and seated on the Seine, 55 miles W of Lemberg. Lon. 22 43 E, lat. 50 4 N.

Jaroslaw, government of Russia, formerly a province of the government of Moscow. It is 160 miles in length, and from 50 to 110 in breadth. The capital is of the same name, and a large commercial place, with numerous manufactures; seated on the Volga, 145 miles NNE of Moscow. Lon. 39 50 E, lat. 57 35 N.

Jasenitz, town of Hither Pomerania, seated on the Oder, eight miles N of Stettin.

Jasper, county of Georgia, bounded by Jones S; Henry and Newton W; Walton N; Morgan NE; and Putnam E. Length 25; mean width 18; and area 450. This county lies along the east side of the Ocmulgee river, and was justly named in ho-

nour of sergeant Jasper, who replaced the U. S. flag on the parapet of fort Moultrie at Charleston, when shot off by a British cannon, in the attack made by Sir Peter Parker.

Jasque, town of Persia, in the province of Mecran, which gives name to a cape in the gulf of Ormus. Lon. 57 4 E, lat. 25 40 N.

Jassy, city of European Turkey, capital of Moldavia, and an archbishop's see. In 1753, it was destroyed by fire; but is now a well fortified place, defended by a castle. The inhabitants are estimated at 12,000. It has been several times taken in the wars between the Turks and the Russians or Austrians. It is seated on the Pruth, 170 miles NNE of Bucharest. Lon. 27 30 E, lat. 47 8 N.

Java, island of the E. Indies, lying to the S of Borneo, and separated at its W end from Sumatra, by the strait of Sunda. It is sometimes called Great Java, to distinguish it from Bali, by some named Little Java; and is 420 miles in length, and of various breadth, extending from 105 to 118 E lon. and 6 to 8 S lat. The land is low, and in some places marshy, near the shore, which renders the air unhealthy; but it rises in a gradual slope toward the interior of the country, admitting in its ascent every variety of situation and verdure. The N coast has a great many commodious creeks, bays, harbours and towns, with many little islands near the shore. This island has very high mountains, particularly the Pepper mountain on the S side; it has likewise impassable forests and wildernesses, but to the N, between Batavia and Bantam, is a very populous country, full of rice fields, and plenty of salt and pepper, beside most sorts of fruits proper to the climate. The serene season is from May till November; and then the rains begin, which lay the low grounds under water, kill the insects, and continue till May. In March they begin to sow, and in July the sugar and rice begin to ripen; but Septem-

ber and October are the best months for all sorts of fruits. Java has always been considered in a high degree unhealthy, but this observation applies correctly only to the sea coasts. The interior is in many places, high, airy, temperate and healthful. The fruits, grains and other vegetables of nearly all climates are found on this island, but their culture depends upon suitable elevation.

Java was originally colonised by the Dutch; it was taken in 1811, by the British, but has been since restored to the king of the Netherlands.

Java-head, W end of Java, towards the straits of Sunda.

Jefferson, county of Mississippi, on the Mississippi river, bounded by that stream NW; by Claiborne N; uncertain on the E; by Franklin S; and Adams SW; length 30; breadth 18; area 540 square miles. Besides the Mississippi river, this county is watered principally by Fairchilds and Coles creeks, in the centre, and by the sources of Homochitto river, and Bayou Pierre, towards its eastern extremity. It is bounded along the Mississippi by a selvedge of low and perfectly level land. This flat is followed at a distance of from one to four or five miles by what is known as the Mississippi bluffs. With the bluffs commences a surface generally moderately hilly, and covered by a very dense forest which continues to the utmost eastern limits of the county. The soil of the Mississippi below the bluffs a deep and highly fertile loam, but mostly subject to annual inundation. The soil of the bluffs, and generally on the waters of Coles and Fairchilds creeks, the soil is highly productive, but gradually deteriorates towards the branches of Homochitto and Bayou Pierre, and terminates in open pine woods, with a sterile soil. Staple cotton. Chief town, Greenville.

Jerusalem, ancient and famous town of Asia, formerly capital of Judea, after David had conquered the Jebusites. It was taken by Nebuchadnezzar in the reign of Zedekiah, and the Jews were led captives to Babylon. It was afterwards taken by the Romans, and ruined, together with the Temple, 70 years after the birth of Christ, after sustaining one of the most remarkable sieges in history. The emperor Adrian built a new city near its ruins. It was taken by the Persians in 614, and by the Saracens in 636. In 1099, it was retaken by the Crusaders, who founded a new kingdom, which lasted 88 years, under nine kings. Saladin, king of Egypt and Syria, got possession of it in 1187. The Turks, who drove away the Saracens in 1217, have kept possession of it ever since, and call it *Heleods*, that is, the Holy City. It is now inhabited by Turks, Arabs, Jews, and Christians. It stands on a high rock, with steep ascents on every side except to the N. It is almost surrounded with valleys encompassed with mountains, so that it seems to stand in the middle of an amphitheatre. It is about three miles in circumference, and includes Mount Calvary, which was formerly without the walls. On this hill is erected a large structure, with a round nave, which has no light but what comes through the top, like the Pantheon at Rome. This is called the church of the holy sepulchre: at the entrance, on the right hand, is that place where the body of our Saviour was laid. The table on which he was said to have been laid at first, is two feet and a half high from the pavement, and is now covered with white marble, because its visitors were for all carrying away a small bit. The chapel is cut out of the rock, and lamps are kept constantly burning in it. The whole is covered with white marble, both within

and without; and on the outside there are 10 fine columns of the same. It is covered with a platform, the middle of which is exactly above the three holes, and forms a small dome, six feet in height, covered with lead, and supported by 12 columns of porphyry, placed by pairs on the platform, and forming six arches, which have three lamps under each. Before the gate of the sepulchre is a silver lamp, so large, that two men cannot fathom it. On Good Friday, all the parts of our Saviour's passion are solemnized in this church. The Christian pilgrims flock here from various parts, and the inhabitants accommodate them with lodging and provisions, which is their chief business; and a bashaw, with a guard of janissaries always resides here to protect them from the insults of the Arabs. Jerusalem was taken by the French under Bonaparte, in Feb. 1799. It is 112 miles SW of Damascus, and 45 from the Mediterranean sea. Lon. 35 26 E, lat. 31 50 N.

Jerusalem, post village and township, Ontario county, New York, on the W side of Seneca lake, and 38 miles NE of Bath. This was the seat of Jemima Wilkinson, the foundress of a religious sect, and some of her followers. Population in 1820, 1610.

Jeso, group of islands on the E coast of Asia, lying between those of Japan and the Kuriles. The southernmost, called Matmai, lies N of Naiphon. It is governed, by a tributary prince, dependent on the empire of Japan, and fortified on the side toward the continent. It is full of woods; and the inhabitants, who live by fishing and hunting, are strong, robust, savage, and slovenly, when compared to the Japanese. The two islands to the NE of Matmai, Kunachir and Zellany, and likewise the three still further to the NE, called the three Sisters, are perfectly independent. The Japanese give the name of Jeso to the whole chain of islands between Japan and Kamschatka. See *Kuriles*.

Jessamine, county of Kentucky; bounded SE, S, and SW by Kentucky river; NW by Woodford, and NE by Fayette. Length 14; breadth 12; and area 170 square miles. The surface of this county may be considered level, and soil generally first rate quality. Nicholasville its chief town, stands

nearly in the centre, about 85 miles almost due south from Cincinnati.

Jidda, *Judda*, or *Djedda*, seaport of Arabia Felix, on the Red sea, in the sheriffate of Mecca. A very considerable trade is carried on here, this city being a mart between Egypt and India. The ships from Suez seldom proceed further than this port, and those from India are not suffered to advance to Suez. The English are particularly favoured in the trade of this place, as they pay only eight per cent. dues of custom, while all others, even the subjects of the sultan, pay ten; and they are suffered to discharge this in goods, while all others must produce money. Jidda has no fresh water, and is situated in

a barren sandy district, 34 miles SW of Mecca, of which it is the port. Lon. 39 22 E, lat. 21 29 N.

Jigitonhonha, river of Brazil, in Mianas Geraes. It is celebrated for the diamonds found in its bed.

Jihon, or *Gihon*, ancient Oxus, river of Asia, rising in the same mountains with the Indus and Sihon, or Jaxartes. Its SE sources interlock also with those of the Hindmend, ancient Etymender flowing into the sea of Durrah. The course of the Jihon is generally to the NW; comparative course about 900 miles. This noble stream had formerly a communication with the Caspian, which is now impeded by sand. Before the destructive influence of the Tartars, the country on the Jihon was flourishing and well cultivated. The regions it drains, are amongst the finest of central Asia.

Population about 35,000, composed of Greeks, Albanians, with a few Turks and Jews. Lon. 21 40 E, lat. 39 30 N. It is situated in a mountainous, but fertile and romantic region, and has been recently rendered remarkable as being the scene of the power, wealth, tragic adventures, and final catastrophe of Ali Pacha. Since the death of this ferocious chief the city has been restored to the Ottoman empire.

Joanpour, city of Hindoostan Proper, capital of a circar of the same name, in Benares. It is seated on the Goomty; and not far from the confluence of that river with the Ganges; the fort of Jionpour is a building of considerable extent, on a high bank commanding the bridge over the Goomty. It is now chiefly in ruins, although, formerly, it commanded the country, from the Ganges to Lucknow. The place, was, at one time, the seat of an empire. Chaja Jahan, vizier to sultan Mohammed Shah, during the minority of his son, Mamood Shah, assumed the title of sultan Shirki, or king of the East, took possession of Bahar, and fixed his residence at Joanpour, where he built the great mussud, or mausoleum, which is still remaining, for

himself and family. The stone bridge over the Goomty consists of 16 pointed arches; and on the top of it are many little shops on both sides. It was built in 1567, upon such sound principles, as to have withstood, for such a length of time, the force of the stream, which, in the time of the rains, is very great. The inundations have been known to rise frequently over the bridge, insomuch that in 1774, a brigade of the British army passed over it in boats. Joanpour is 49 miles NW of Benares. Lon. 84 7 E, lat. 25 45 N.

Juan de Puerto Rico, St. island of the West Indies, 50 miles E of Hispaniola, and usually called Porto Rico. It is 100 miles long and 50 broad, and belongs to the Spaniards. It is full of very high mountains, and extremely fertile valleys, interspersed with woods and well watered by springs and rivulets. It produces sugar, rum, ginger, corn, and fruits, partly proper to the climate, and partly introduced from Spain; and there are so many cattle, that they often are killed for the sake of the skins alone. Here are a great number of uncommon trees, and there is a little gold in the N part of the island. It is commonly said, that the air is healthy, and yet, in the reign of Queen Elizabeth, the earl of Cumberland, when he had taken this island, lost most of his men by sickness, and, on that account, was forced to abandon it. It is subject to storms and hurricanes, like the rest of these islands. The capital is of the same name. Lon. 67 4 W, lat. 18 17 N.

Juan Fernandez, island in the S Pacific Ocean, lying in 83 W lon. and 33 S lat. 360 miles W of Chili. It is uninhabited, but is found extremely convenient to touch at and water. There are instances of two men living alone at different times on this island for several years; the one a Musquito Indian, the other Alexander Selkirk, a Scotchman, who having been left on shore, in this solitary place, by his captain, lived here five years, till he was discovered by captain Rogers, in 1709. From this remarkable history, Daniel de Foe is said to have derived the hints which gave rise to his celebrated production, *The Adventures of Robinson Crusoe*. This island is not quite 15 miles long and about six broad: its only safe harbour is on the N side. It is said to have plenty of excellent water, and to abound with a great variety of esculent vegetables highly antiscorbutic; besides which, commodore Anson sowed a variety of garden-seeds, and planted the stones of plums, apricots and peaches, which he was, many years afterwards, informed, had thriven greatly; and

now, doubtless furnish a very valuable addition to the natural productions of this spot.

Jura, Mount, chain of mountains, which begins in the canton of Zurich, in Switzerland, extends along the Rhine into the canton of Soleure and the principality of Neuchatel, branches out toward the Pays de Vaud, separates that country from France, and continues beyond the frontiers of the Genevois as far as the Rhone. In various parts of the Pays de Vaud, this chain forms many elevated valleys; of these the most delightful is the valley of the lake of Joux, upon the top of that part called Mount Joux, it is beautifully chequered with wood, arable, and pasture; and is watered by two picturesque lakes; the largest of which is called the lake of Joux, and the other, like Brenet. This little vale is very populous, containing 3600 inhabitants; some employed in making watches, but the greater part in polishing crystals, granites, and marcasites. These parts are much infested with bears and wolves. The descent from this delightful vale, through a variety of hill, valley, wood, and lawn, affords a very extensive prospect of great part of the Pays de Vaud, the lake of Geneva, with its mountains, and the lake of Neuchatel. See *Vosges*.

Juvullo, very remarkable volcano of Mexico, in the intendancy of Valladolid. Lon. W C 24 10 W, lat. 19 9 N. It was formed by an irruption in one night, between September 28th and 29th, 1759. Kenilworth, town in Warwickshire, with a market on Wednesday. Here was a famous castle, the remains of which form one of the most picturesque objects in the kingdom. It is five miles N of Warwick, and 95 NW of London.

Kenmare, town of Ireland, 12 miles SSW from Killybeg.

Kennebec, river which rises in the northern part of Maine, and falls into the Atlantic Ocean, between the bays of Casco and Penobscot. The Kennebec river is formed by the union of the Kennebec proper with the Androscoggin, and drains a basin of 150 miles in length, with a mean width of 80 miles, embracing an area of about 12,000 square miles. The tide flows up the Kennebec to Augusta 45 miles, and in the Androscoggin to near Durham. Though interrupted by falls and shoals, both branches afford very considerable extent of inland navigation. Toconich falls occur in the Kennebec at Waterville, about 20 miles above Augusta, but the stream is navigated to a considerable distance higher than that obstruction. Timber is the principal staple brought down either branch of the Kennebec.

Kennebec, county of Maine, bounded by Lincoln SE and S; Oxford W; Somerset N; Penobscot NE, and Hancock E. Length 47; mean width 22; and area about 1000 square miles. Surface hilly, but generally arable, and soil productive in grain and pasturage. Chief towns, Hallowell and Augusta.

Kent, one of the counties of England, situated at the SE corner of the island, and from thence enjoying many advantages. As to the climate of this country it varies according to the situation of places. There is no region more happily or more beautifully diversified in regard to soil, so that every kind thereof is, somewhere or other, to be met with in its bounds; and in no shire are any of these soils more fertile than they are in this. The Weald yields variety of fine timber, particularly of chestnut; the middle part has very rich arable land, annually bearing every species of grain in immense plenty, and these excellent in their several sorts. There are also many beautiful orchards, which produce a variety of fine fruits, and more especially apples and cherries, which were introduced here from Flanders. The many rich commodities produced in this county, is the reason why most of our writers have represented it as in a manner void of manufactures which, however, as appears upon a strict and impartial examination, is very far from being the case. Of iron works there were anciently many; and there are still some, where kettles, bombs, bullets, cannon, and such like, are made. The principal rivers, besides the Thames, are the Medway, Darent, Stour, Cray, and Rother. Maidstone is the county town. Population in 1801, 307,624; in 1811, 373,995; and in 1821, 426,016.

Kent County, Upper Canada, comprehends all the country (not being the territory of the Indians) not already included in the several counties herein described; extending northward to the boundary line of Hudson's bay, including all the territory to the westward and southward of the said line, to the utmost extent of the country commonly known by the name of Canada. It sends two representatives to the provincial parliament.

Kent, county of Lower Canada, commencing opposite Montreal, and extending down St. Lawrence about 11 miles, and S E to the boundary of Bedford county.

Kent, county of Rhode Island, bounded by Connecticut W; Providence county N; Narragansett bay E, and Washington S. Length 23; mean width 9; and area 207 square miles. Surface waving rather than hilly. Soil productive in fruits, grain, and pasturage. Chief town, Warwick.

Area, 37,680 square miles, or 24,115,200 acres.

The greatest length of Kentucky is from the south-west angle of the state on Mississippi river, to the head of Great Sandy river, 380 miles: mean width, 99 miles.

Extreme south, North lat. 36 30; extreme north, at the Great Miami bend, 39 5.

It is obvious by a simple inspection of its great feature that Kentucky must present considerable diversity of soil and climate. On its south-east border it is limited by Cumberland mountain, from which most of its streams take their source. Unlike the opposite slope of the Ohio valley, no table land, in the true meaning of the term, exists on that on which Kentucky is placed.

In point of soil the state is divisible into three portions; the mountainous, hilly, and level. The mountainous section of Kentucky, is of small and unimportant extent, being limited to the region towards the sources of Cumberland, Kentucky, Licking, and Great Sandy rivers. If all the south-east angle of the state is taken as mountainous, it will not amount to one-fourth the area of the whole. But, though the mountains are not very elevated, this part of the state is very broken, and generally sterile soil.

The second, or hilly section, follows the mountainous, and is much more extensive. The hilly natural subdivision spreads over, in fact, much the greater part of the state, reaching from the Ohio river between Great Sandy and Licking rivers, and the border of Tennessee, nearly as low down as Ohio below the mouth of Salt river.

From analogy it might be expected, that on the left as well as right slope of Ohio valley, table land would be found. This is not, however, the fact; so far otherwise

is the face of the hill part of Kentucky, that in no part of the United States is the earth so broken by abrupt steep, nor where the water courses have cut channels so deep in proportion to quantity of water, and length of course. In their natural state, before the settlement of the whites, these vales were overgrown with a thick forest, under which grew brakes of the reed cane, and rendered this part of Kentucky the most impenetrable to the footsteps of man, of any part of the North American forest yet attempted. On the level bottoms of Louisiana the large cane brakes are extremely difficult to pass, but it is on uneven ground that this gigantic grass renders human effort to penetrate its recesses, to the last degree painful and slow. The cane brakes, however, like the wild animals they once sheltered, disappeared before civilized man. In Kentucky this fact has been realized in a very striking manner. The buffalo, deer, bear, elk, and the *Aruno digantea*, have in great part vanished; and in their places farms, orchards, meadows, towns, and villages, have arisen.

I have more than once remarked, the curious circumstance, that in the Ohio valley, most of the hills were fertile to their summits. This characteristic is very striking in that part of Kentucky we have under review; it is so peculiarly so, that the hills are in many places more fertile than the bottoms. The prevailing timber of the hills is chesnut, hickory, poplar (*Liriodendron tulipifera*) sugar maple, elm, and hackberry. In the bottoms the timber is nearly similar though larger.

As the rivers advance in their progress toward their common recipient, they pursue through the mountainous and hilly tracts we have noticed, nearly a west course, but are all less or more inflected to the northward at a considerable distance before their final discharge into Ohio. The uniformity of their curves must have arisen from some feature in the surface of the original plain, into whose surface their channels are worn. The rivers of the right slope of the basin are remarkable for all having courses not deviating much from north and south. Those of the left, in the lower or inferior part of their courses, flow nearly north.

The rivers of Kentucky are more characterized than are even those of Ohio and Indiana, by the deepness of the vales or ravines they have formed out of the secondary strata over whose surface they flow. The substrata of Kentucky is limestone in the far greater part, into which the rivers have worn precipitous channels.

Below the great bend of its rivers, the physiognomy of the country changes from sharp, high, steep hills, narrow, deep and gloomy valleys, to a comparative rolling or

even level country. Though on a smaller scale, than the expansive tracts of fertile soil on the opposing slope, this part of Kentucky is amongst the most desirable in the United States. It is the only part of Kentucky which assumes any of the attributes of a table land. The soil is extremely fertile, but in many places so very shallow as scarce to admit the growth of large trees. Its base is one immense floor of secondary or floetz limestone. This region may be said to occupy the central parts of the state from the waters of Green river to those of Licking, inclusive, and contains the best peopled part of the state. A want of spring water is felt in many parts of this range, a common deficiency of all places where carbonate of lime prevails to the exclusion of other rocks. Water is perhaps in equal quantity but unequally distributed. Springs of immense volume occur, and are followed by wide spaces where none are found.

Advancing south west through Kentucky the central table land we have under review gradually becomes more level and less fertile. The natural timber trees on the north-east part is liriodendron, elm, black walnut, honey locust, buckeye, papaw, cotton wood, and wild cherry. This forest growth prevails on the middle waters of Licking, and Kentucky; the heads of Salt and Green rivers. It is followed toward Tennessee by the "*Barrens*," an area wooded by oak, chesnut, elm, &c. The barrens are interspersed by other species of soil, by broken, and what is called the oak knob districts. In fact, the latter term much more appropriately marks the character of this section of Kentucky, than does barrens. The hills are here round, gently sloping, and deviate in a striking manner from the common ridge form of a hilly country.

The substratum continues to be as to the north-east flat imbedded limestone.

Approaching towards the Ohio river the true superstructure of the basin again appears, as we have seen on the opposing slope. The rivers having found their way from the mountains over the hilly and central table land, their channels become deeper. From Great Sandy to its mouth, the aspect of the two opposing banks of the Ohio river are alike, and all the observations made in any general view or particular survey of Ohio, Indiana, and Illinois, applies with equal correctness to Kentucky. A very hilly broken border of about twenty-five or thirty miles wide, following the inflections of Ohio river, skirts the state from Great Sandy to the mouth of Cumberland river. This border is the buttress of the Kentucky slope, fractured, if such a term can be admitted, by the abrasion of the waters flowing from the inte-

rior. Though not obstructed by falls, or even remarkable rapids, the streams of Kentucky flow with great velocity, occasioned by the considerable inclination of their plane of descent. The space between the mountains and Ohio river has a small declivity, but the great depth of the bed of the latter river has given so much pitch to the water, that every stream has formed for itself a channel whose declivity corresponds to the comparative depression between their sources and recipient. The apex of the hills within three or four miles from the Ohio river is little if any below that of those far in the interior. The humble elevation of the interior hills are in relation to their base; if taken above Ohio river their height would nearly correspond to those near that stream.

We may, therefore, on leaving Ohio river, conceive ourselves rising rapidly to a level with the general surface. We find the waters flowing in enormous chasms, lined by limestone walls of from 100 to 300, or 400 feet deep. These chasms become less profound as we advance towards the mountain sources. Near the Ohio we meet with innumerable gushing springs of water, which as we ascend the central table land become more rare. We again find these fountains increase as we proceed on our way to the mountain border.

Over all the wide extent of Kentucky, the only really level surface of note is the bottoms of Ohio. Those bottoms are, in every place where they occur, perfectly similar in structure, and generally uniform in their texture. But the bottoms on the Ohio, in much the greater part, fall backwards toward the hills, at the base of which, ponds and small marshes are frequent. But few instances of a regular acclivity from the water edge exist on the Ohio. In this instance this river differs essentially from most streams on the Atlantic slope, and particularly from the St. Lawrence. These ponds along the base of the Ohio hills superinduce bilious complaints in autumn. They are, however, easily drained, and the beneficial consequences of such melioration on the face of nature are felt at Louisville and other places, where such works have been executed.

As the bottom lands of Ohio constitute so remarkable a feature in the topography of the United States, and as Kentucky embraces the largest share of this species of soil, I have reserved to the present, to introduce its particular description. The natural position of Ohio river, and the process of its formation has been amply discussed. It has been shown that that stream, and all its confluent owe their existence to the wearing away of a primitive plain. It has been also noticed that this

process must have been gradual and of very long continuance.

The vale of Ohio, at the city of Pittsburgh is 460 feet deep; and this depth diminishes in proportion to an advance towards the lower termination of the vale, and at the junction of Ohio and Mississippi rivers, the water is but little depressed below the level of the adjacent bottoms.

Evidences of the periodical recession of the water is every where seen in the bottoms. In most places there are two, and in some places three stages of bottoms, elevated above each other 15, 20, or 25 feet. The first, or lowest stage, is yet subject to immersion, at the period of very high floods, the second and third have long ceased to be liable to inundation.

Newport, and Covington, the former above, and the latter below the mouth of Licking river, opposite Cincinnati, are on first bottoms.

Louisville, at the rapids of Ohio, stands on a first bottom, more than usually elevated, but falling in the rear into low ponds.

In general the towns along the margin of Ohio, except at the mouth of rivers, are on second bottoms. Below Louisville the hills are so much declined in elevation, as to render that place a point of separation between the bold and rich scenery above, and the more humble and less variegated landscapes below that place. It is also a point where the bottoms commence a change from the stair-form we have described to the flat and monotonous aspect of the shores of the Mississippi. From the apex of the hills on one side, to those on the other, the distance is about two miles, three-fourths of which is occupied by the river and slopes of the hills, leaving about half a mile, or 880 yards, for the breadth of the bottoms. The length of Ohio is 348, or in round numbers 350 miles, which at half a mile wide would yield 425 square miles of bottom land. This amounts to only 528,200 acres, much less than is commonly believed, though I am well convinced falls little if any short of the real quantity. As to fertility, no description can much exceed reality; this range is no doubt amongst the most productive in the northern temperate zone. Its natural indigenous forest trees indicate a soil of the very highest strength of production. The most prominent species are oaks, elms, ash, and hickory, of every variety; black and white walnut, liriodendron, sugar maple, linen, cotton wood, and sycamore; with an underwood of papaw, dogwood, and spice. Every vegetable which the climate will admit can be produced in abundance. We may dismiss the subject at present by observing, that in point of climate the Ohio itself ranges through three degrees and

forty minutes of latitude. The mouth of Big Beaver, being in North lat. 40 40, and the mouth of Ohio North lat. 37. Of this climatic expanse, Kentucky embraces two degrees and eight minutes of latitude.

We have now surveyed Kentucky, and have found the features of nature exhibited on its surface to be in accordance with those of other parts of the basin in which it is situated. We have found, a much more varied physiognomy than that country is commonly allowed to possess. It is a region, indeed, which well deserves the attention of the philosopher and statesman: it is interesting to the former from its peculiar structure and productions, and to the latter from its commanding position.

Politically, Kentucky is subdivided into the counties of:

Of this population, 2,759 are free blacks, and 126,732 are slaves, leaving a white population of 434,826.

The different members of this mass, according to the census of 1820, were classed thus:

Foreigners not naturalized	-	529
Engaged in Agriculture	-	132,161
do. Manufactures	-	11,779
do. Commerce	-	1,617
		<hr/> 146,086

Those counties, the population of which are not marked, have been formed since the last census was taken.

Lawrence county was formed out of Greenup; Hickman, between the state of Tennessee, and Tennessee, Ohio, and Mississippi rivers; Pike from Floyd, and Perry from Clay.

The principal productions of Kentucky, are wheat, flour, Indian corn, salted provisions, live stock, tobacco, hemp and salt. Manufactures of various kinds have risen to considerable extent particularly coarse cloths and cordage. The commercial outlet of Kentucky is the Mississippi river.

The interests of education have received considerable attention in this state, the Transylvania, is a comparatively recent but a really respectable institution. According to a report of the Professors in this seminary dated February 11th, 1822, the school of Medicine presents, "all the means requisite for a complete course of medical

education, conducted in the usual academical form.

The Library of the Institution is select and valuable, containing in various languages, the standard and most esteemed works in medicine, both ancient and modern, with no inconsiderable number of the same rank in the several collateral branches of science; the chemical apparatus is, in many respects, not inferior to any in the United States; and the anatomical museum, already rich in matter of instruction, will be rendered much more so, by additions which it will receive from Europe in the course of the summer. The lecture rooms are also spacious, comfortable and commodious.

Courses of lectures are delivered on all the branches of medicine taught in the eldest schools of our country.

The price of subsistence is unusually moderate, and accommodations excellent, the situation exceedingly healthy, and, in intelligence, morality and refinement, the society not surpassed by that of any other town in the United States.

The lectures will commence annually, on the first Monday in November, and terminate early in the month of March.

To be entitled to present himself a candidate for the degree of Doctor of Medicine, a pupil must be twenty-one years of age, and have attended two full courses of lectures—one of them at least, in this Institution.

But any Physician, who shall have practised his profession with reputation for the term of four years, may become a candidate after attending one full course of lectures in this school."

The charter of a second university to be located at Danville, was granted by the Legislature in 1819.

Kentucky, river, rises in Floyd county, in the spurs of Cumberland mountain, interlocking with the sources of Licking and Big Sandy, and opposite to those of Tennessee. The general course of Kentucky river is NW, and by comparative courses 200 miles, through or bordering on Floyd, Perry, Estill, Clark, Madison, Fayette, Jessamine, Garrard, Mercer, Woodford, Franklin, Shelby, Owen, Henry and Gallatin counties. It enters Ohio at Port William, and in times of flood navigable by the windings of the stream about 150 miles.

Kerbela, ancient Vologesia, town of Irak Arabi, on the W bank of the Euphrates, about 50 miles SW from Bagdad.

Kerebolang, island in the Indian Ocean, between 80 and 100 miles in circumference. Lon. 126 31 E, lat. 4 28 N.

Keresoun, ancient *Cervatus*, town of Asiatic Turkey, on the Black Sea, 70 miles W SW from Trebizond.

Kerguelen's Land, island in the Southern Ocean, visited by captain Cook, in 1779, Lon. 69 37 E, lat. 49 3 S.

Kerman, province of Persia, ancient *Caramania*, lying on the gulf of Persia. The inhabitants drive a great trade in their wool.

Kerman, town of Persia, capital of a province of the same name, called also *Caramania*. It is 120 miles NNW of Gambrun. Lon. 55 15 E, lat. 29 20 N.

Kerpen, town of Germany, in the circle of Westphalia, in the duchy of Juliers, 14 miles SE of Juliers. Lon. 6 56 E, lat. 50 0 N.

Kerry, county of Ireland, in the province of Munster, 57 miles long and 45 broad, bounded on the E by the counties of Limerick and Cork, on the W by the Atlantic Ocean, on the N by the Shannon, which separates it from Thomond, and on the S by Desmond and the ocean. It is a mountainous country, but in many places are good corn-fields. It contains 84 parishes, and sends eight members to parliament. Ardfert is the capital.

Kershaw, district of South Carolina, bounded by Sumpter and part of Richland SE; part of Richland SW; Fairfield W; Lancaster NW and N; Chesterfield NE; and Darlington E. Length 33; mean width 24; and area about 800 square miles. Surface pleasantly diversified by hill and dale. Soil productive. Chief town, Camden. This district was not returned in the census of 1820, but the aggregates, as subsequently published in Niles' Register, are annexed to the subjoined table.

Kertsch, fortress of great importance, which with Jenikale command the passage which forms the communication between the sea of Asoph and the Black Sea. It is situated on the E coast of the Crimea, near the N entrance of the straits of Caffa, 12 miles from Jenikale.

Keeran, chain of mountains, on the coast

of Syria, which makes a part of Mount Libanus.

Kessel, town of Prussian Guelderland, with a handsome castle, seated on the Mease, between Ruremond and Venlo. Lon. 5 49 E, lat. 15 16 N.

Kesselbort, village of Germany, in the circle of Upper Saxony, three miles below Dresden, remarkable for a victory gained by the king of Prussia, over the Saxons, in 1745.

Kesteven, one of the three grand divisions of Lincolnshire. It contains the W part of the county, from the middle to the S extremity.

Keswick, town in Cumberland, with a market on Saturday, it is seated in a vale surrounded by hills, near the rapid river Greeta; near this vale the finest black lead in the world is dug up. It is 25 miles NW of Kendal, and 217 NNW of London. Lon. 3 15 W, lat. 58 35 N.

Keswick, *Vale of*, district in the S part of Cumberland. Here is the lake of Derwent-water. To the N of this is the lofty mountain Skiddaw, one of the most distinguished in England; and to the S is the dreary region of Borrowdale. See *Borrowdale*, *Derwent-water*, and *Skiddaw*.

Kettering, town in Northamptonshire, 12 miles NE of Northampton, and 75 NW of London. Lon. 0 59 E, lat. 52 20 N.

Kew, village in Surrey, seven miles W by S of London, on the Thames, over which is a stone bridge of seven arches to Brentford. Here is a royal palace, fine gardens, and his majesty's exotic garden. Many new plants from the South Sea and Cape of Good Hope being transplanted to it. The latter has been brought to great perfection. Kew gardens are open to the public, every Monday, from Midsummer to the end of Autumn.

Keweenaw Point, projects far into the S side of lake Superior. It is thus distinguished and described by Mr. Schoolcraft. "It has sometimes been confounded by geographers, and travellers, with Point Chegoimegon, which is 130 miles further west. In coasting round this point it is estimated to be ninety miles, but canoes shorten the voyage, by ascending the Portage river, which nearly insulates the point from the main shore, and makes a portage of less than a mile, into the lake west from the point. To the east of this point there is a large bay, 12 miles wide by 20 in length called Keweenaw bay, which it is necessary to cross, in order to reach Portage river. See *Portage river*."

Kexholm, town of the Russian government of Wiburgh, on two islands of the lake Ladoga, 60 miles NE of Wiburg, and 67 N of Petersburg. Lon. 30 25 E, lat. 61 3 N.

Keynsham, town in Somersetshire, on the

Avon, five miles SE of Bristol, and 119 W of London. Lon. 2 34 W, lat. 51 24 N.

Keysville, post village of Charlotte county, Virginia, on the head waters of Meheim river, 70 miles SW from Richmond.

Khorazin, country of Asia, along the E side of the Caspian. It corresponds in part with ancient Hyrcania, or rather the western part of Scythia Intra Imarum.

Kharkof, government of the Russian empire, formerly comprised in the government of Ukraina-Slovodskaia. Its capital of the same name, is seated on the Uda, which falls into the Donetz.

Khajund, city of Bucharia, on the Sihon or Jaxartes river, 120 miles NE from Samarcand.

Kia-king-fou, city of China, in the province of Tche-kiang, remarkable for nothing but its streets, ornamented by beautiful piazzas, that shelter passengers from the sun and rain. Seven cities of the third class are dependent upon it.

Kaichta, town of Asiatic Russia, on the Selinga river, and frontier of China, about 200 miles S from Irkoutsk. It is the centre of trade between Russia and China. Lat. 50 30 N. lon. 10 7 E.

Kiang-nan, province of China, bounded on the W by Honan and Houquang, on the S by Tche-kiang and Kiang-si, on the E by the gulf of Nanking, and on the N by Chan-tong. It is of vast extent and contains 14 cities of the first rank, and 93 of the second and third. These cities are very populous, and all of them are great trading places, it is full of lakes, rivers and canals; and their silks, japanned goods, ink, and paper, bring higher prices than that of the other provinces, Nan-king is the capital.

Kiang-Si, province of China, bounded on the N by Kiang-nan, on the W by Houquang, on the S by Quang-tong, and on the E by Fo kien and Tche-kiang. The mountains of this province contain mines of gold, silver, lead, &c. the rice it produces is very delicate, and its porcelain is the finest of the empire. It contains 13 cities of the first, and 78 of the second and third. Nan-tchang-fou is the capital.

Kiburg, town of Switzerland, and in the canton of Zurich, with a castle. It is seated on the river Theoff, 14 miles NE of the town of Zurich. Lon. 8 46 E, lat. 47 28 N.

Kidderminster, corporate town in Worcestershire. It is seated under a hill, on the river Stour, and is the principal manufacturing place in the county, and it was particularly noted for a woollen manufacture called Kidderminster stuffs. Its former trade of stuffs is much declined, on account of the general use of cotton goods, but its carpet manufacture has greatly increased. It is 14 miles SE of Bridgenorth,

and 125 NW of London. Lon. 2 18 W, lat. 52 28 N.

Kidwelly, town in Carmarthenshire, in S Wales. It is seated on a creek of the Bristol Channel, near the mouth of the Towy. From this town, a canal has been cut to some collieries, whence coal is brought down and exported. It is eight miles S of Carmarthen, and 224 W by N of London. Lon. 4 20 W, lat. 50 44 N.

Kiel, strong and considerable town of Germany, in the circle of Lower Saxony, capital of Holstein, with a castle, and a university. It stands on a peninsula, in a bay of the Baltic, and has a commodious harbour for ships of the largest size. A canal was begun in 1777, by which the navigation of the Northern Sea is to be united with the Baltic; and crosses Holstein, by the canal of Kiel, and the river Eyder, which passes by Rendsburg, and falls into the German Ocean at Tonningen; by which Kiel has become one of the most commercial places in Holstein. Kiel is 37 miles NW of Lubec, and 46 N by E of Hamburg. Lon. 10 0 E, lat. 54 20 N. See *Holstein*. See article *Navigation Inland*.

Kiema, promontory of Switzerland, on the W shore of the lake of Zug, of which it is remarkable, that the ground belongs to the canton of Lucern, the timber to that of Zug, and the levees to that of Schweitz.

Kien-ning-fou, city of China, in the province of Fo-kien. At the time of the conquest of China by the Mandshurs, it sustained two sieges, and after some time it was taken, and all the inhabitants were put to the sword. Having been since re-established, it is ranked among cities of the first class, and has eight cities of the third class under its jurisdiction. It is 260 miles SE of Nan king.

Kiernow, town of Lithuania, seated on the Villia, where the duke resides. Lon. 35 21 E, lat. 54 50 N.

Kilbarchan, village in Renfrewshire; it is a manufacturing place, and has extensive bleaching grounds. It is five miles SW of Renfrew.

Kilbeggan, borough of Ireland, in West Meath. It is seated on the Bosna, and is 44 miles W of Dublin.

Kilburn, village in Middlesex, in the vicinity of London; famous for a fine well of mineral water.

Kilda, St. small island of Scotland, one of the Hebrides, 18 leagues to the W of North Uist. A great number of the poor people in this island live chiefly by fishing and catching wild fowls. St. Kilda is the most westerly island of Great Britain.

Kildare, county of Ireland, in the province of Leinster, 37 miles long and 20 broad; bounded on the E by Dublin and Wicklow, on the W by King's County, and

Queen's County, on the N by W Meath, and on the S by Catherlough. It is a fertile country, contains 100 parishes, and sends 10 members to parliament.

Kildare, town of Ireland, capital of a county of the same name, with a bishop's see. It is 27 miles SW of Dublin. Lon. 6 37 W, lat. 53 9 N.

Kildrumny, town of Scotland, in Aberdeenshire, seated on the Don. Lon. 2 35 W, lat. 57 20 N.

Kilgarren, town in Pembrokeshire, seated on the river Tyvy; near it is a remarkable salmon-leap, where the fish are caught in great abundance. Above this place, are large works for fabricating tin plates. It is 30 miles N of Pembroke, and 227 WNW of London. Lon. 4 40 W, lat. 52 4 N.

Kilham, town in the E riding of Yorkshire, with a market on Saturday. It is seated on the Moulds, and is 36 miles NE of York, and 200 N of London. Lon. 0 16 W, lat. 54 5 N.

Kilia, fortified town of Turkey in Europe, in the province of Bessarabia; seated in an island at the mouth of the Danube. It is 85 miles SW of Bialogorod, and 290 NE of Constantinople. Lon. 28 46 E, lat. 45 22 N.

Kilkenny, county of Ireland, in the province of Leinster, 40 miles long and 20 broad; bounded on the E by Catherlough and Wexford, on the W by Tipperary, on the N by Queen's County, and on the S by Waterford. It is one of the most healthy, pleasant and populous counties in Ireland, contains 96 parishes, and sends 16 members to parliament.

Kilkenny, town of Ireland, capital of a county of the same name. It is one of the most populous and commercial towns of Ireland; and consists of the Irish and English Town, the last of which is the principal. It once had a bishop and the cathedral is yet standing. It is 26 miles N of Waterford, and 54 SW of Dublin. Lon. 6 55 W, lat. 52 36 N.

Kilkenny, township of Leinster county, Lower Canada, 35 miles NW from Montreal.

Kilkenny, township of Coos county, New Hampshire, 8 miles NE from Lancaster. Population in 1820, 24.

Kilkenny, post town, St. Lawrence county, New York.

Killala, seaport of Ireland, in the county of Mayo, and province of Connaught, with a bishop's see. It is 21 miles N of Castlebar. Lon. 9 11 W, lat. 54 15 E.

Killaloe, city of Ireland, in the county of Clare, and province of Munster with a bishop's see, seated on the Shannon, over which is a bridge of 19 arches. Here is a considerable salmon and eel fishery. It is 10 miles NNE of Limerick. Lon. 8 27 W, lat. 52 50 N.

Killarney, town of Ireland in the county of Kerry and province of Munster, on the side of a lake of the same name. Within half a mile of this place are the ruins of the cathedral of Aghadhe an ancient bishopric united to Ardferit. It is 143 miles SW of Dublin.

Killarney, beautiful lake of Ireland, in the county of Kerry, otherwise called Lough Lean, from its being surrounded by high mountains. It is divided into three parts, called the Lower, Middle, and Upper Lake. The northern, or lower lake, is six miles in length, and from three to four in breadth. The upper lake is four miles in length, and from two to three in breadth. It is almost surrounded by mountains, from which descend a number of beautiful cascades. The islands in this lake are numerous, and afford an amazing variety of picturesque views. The centre lake which communicates with the upper, is small in comparison with the other two, and cannot boast of equal variety; but the shores are, in many places, indented with beautiful bays, surrounded by dark groves of trees. In the several mountains adjacent to the lakes are still to be seen vestiges of mines of iron, lead and copper.

Killevan, town of Ireland, and province of Ulster in the county of Monaghan, eight miles SW of Monaghan. Lon. 7 26 W, lat. 54 10 N.

Killcrankie, noted pass in Perthshire, near the junction of the Tummel with the Garry. It is the grand entrance into the Highlands in those parts, and is formed by the lofty mountains impending over the Garry, which rushes through in a deep darksome, and rocky channel, overhung with trees. At present, a fine road gives an easy access to the remote Highlands; and the two sides are joined by a fine arch. Near the N end of this pass, in its open and unimproved state, king William's army under general Mckay, was defeated, in 1689, by the Highlanders, commanded by viscount Dundee, who was killed in the moment of victory. Here also a body of Hessians in 1746 made a full pause, refusing to march further, for it appeared to them as the *ne plus ultra* of habitable country.

Killleagh, borough of Ireland, in the county of Down, seated on an arm of Strangford Lough, where ships may be sheltered from all winds. The celebrated Sir Hans Sloane was born in this town, which is 80 miles N by E of Dublin.

Killinaule, town of Ireland, in the county of Tipperary and province of Connaught, 14 miles N of Cloumel. Lon. 7 26 W, lat. 52 27 N.

Lon. 126 48 W, from London, 49, 48 W from W C. and lat. 49 33 N. But the natives call it *Nootka*, the name now generally adopted by the English. Upon the sea coast, the land is tolerably high and level; but, within the island, it rises into steep hills, which have a uniform appearance. The trees, of which the woods are composed, are the

Canadian pine, white cypress, and two or three other sorts of pine. In general, the trees grow here with great vigour, and are of a large size. About the rocks and borders of the woods were seen some strawberry plants, and raspberry, current, gooseberry bushes, all in a flourishing state. In 1780, a small association of British merchants, resident in the East Indies, formed the project of opening a trade to this place, for supplying China with furs, and took measures, in 1788, to secure themselves a permanent settlement; but the Spaniards being jealous of the intrusion of the English into that part of the world, sent a frigate from Mexico to put an end to this commerce. The frigate captured two English vessels, and took possession of the settlement that had been formed upon the coast. The British ministry immediately ordered a powerful armament to give weight to their demand of reparation; but the affair was amicably terminated by a convention, in 1790.

Kittatinny Mountains, this range passes through Sussex county, New Jersey, crosses Delaware river at the Delaware Water Gap, passes through Northampton county, Pennsylvania, and continuing SW, crosses Susquehannah river, 5 miles above Harrisburg; separates Perry from Cumberland, and Franklin from Huntingdon and Bedford counties, and merges into Maryland, west from Connecocheague creek; crosses Potomac river, between Back creek, and Shenandoah rivers. It is finally merged amongst the other mountain ridges of Virginia.

Kittatinny valley, is the valley between the Kittatinny range and Blue Ridge. In Pennsylvania, this valley varies from 8 to 15 miles wide, and is uniformly composed of a limestone base towards the Blue Ridge, and of clay slate on the side of Kittatinny mountain. The line of separation, between those two rock formations crosses Delaware river about 20 miles above Easton; the Lehigh at the Slates about five miles above Allentown; the Schuylkill above the mouth of Maiden creek; the Susquehannah in the borough of Harrisburg, and the Potomac near the mouth of the Conecocheague. In Virginia, the line of division nearly corresponds with Opequan creek between Jefferson and

Berkeley counties. It is a common, but very erroneous opinion that the whole of this valley is based on limestone; that rock, is, however, confined to the SE side.

Kubesha, large strong town situated on a hill between high mountains. Its inhabitants call themselves Franki (Franks, a name common in the east to all Europeans,) and relate that their ancestors were brought thither by some accident, the particulars of which are now forgotten. The common conjecture is, that they were mariners cast away upon the coast; but they who pretend to be better versed in their history tell the story this way. The Greeks and Genoese, say they, carried on during several centuries, a considerable trade, not only on the Black Sea, but likewise on the Caspian, and were certainly acquainted with the mines contained in these mountains, from which they drew by their trade with the inhabitants great quantities of silver, copper, and other metals. In order to work these upon the spot, they sent thither a number of workmen to establish manufactories, and instruct the inhabitants. Their town is considered as a neutral spot, where the neighbouring princes can deposit their treasures with safety. They elect yearly twelve magistrates, to whom they pay the most unlimited

ed obedience; and as all the inhabitants are on a footing of perfect equality, each individual is sure to have in his turn a share in the government. In the year 1725, their magistrates, as well as the Usmeri, acknowledged the sovereignty of Russia, but without paying any tribute. Lon. 67 59 E, lat. 42 30 N.

It is divided into 41 parishes, and the number of inhabitants in 1801 was 146,689; in 1811, 191,753; and

in 1821, 234,387. It sends one member to parliament. The river Clyde runs through the whole extent of the county, dividing it into two nearly equal parts; the southern part a mountainous district, generally called Clydesdale. It abounds in lead, iron, and coal.

Lancashire, county of England, bounded on the N by Cumberland and Westmoreland, E by Yorkshire, S by Cheshire, and W by the Irish Sea. It is 74 miles from N to S (including a detached hundred on the NW, called Furness, which is separated from the rest by a creek, at the head of Morecambe bay) and its greatest breadth is 44 miles. It contains 1,155,140 acres is divided into six hundreds, and 63 parishes; has 27 market towns; and sends 14 members to parliament. The number of inhabitants in 1801 was 672,781; in 1811, 828,309; and in 1821, 1,052,859. It is a county-palatine, under the title of the duchy of Lancaster; the only duchy of England (that of Cornwall excepted) which is not merely titular. Lancashire is little adapted for a corn country, but is singularly fitted for the growth of potatoes. Among its products is a species of coal, called cannel, far exceeding all other, not only in making a clear fire, but for being capable of being manufactured into candlesticks, cups, standishes, snuff-boxes, &c. As a commercial and manufacturing county, it is superior to any other in the kingdom. Its principal manufactures are linen, silk, and cotton goods; fustians and counterpanes, shalloons, bays, serges, tapes, hats, canvas, sucking, pins, iron goods, plate-glass, &c. Of the commerce of the county, it may suffice to observe, that Liverpool is the second port in the kingdom. The principal rivers are the Mersey, Irwell, Ribble, Loyne, Levern, Wyre, Hodder, Roche, Duddon, Winster, and Ken; and it has two considerable lakes, Winander-mere and Coniston-mere. It has also numerous canals, and the honour of exhibiting the first regular one in the kingdom, which was begun by the duke of Bridgewater in 1758.

Lancaster, borough and the capital of Lancashire, governed by a mayor, with a market on Saturday. It is seated on the Loyne, or Lune, which forms a port for vessels of moderate burden, and over it are two stone bridges. Along the river side is a fine quay, also yards for ship-building; and a canal, from Kandal, winds round the E part of the town, which is covered over the river by an aqueduct of five arches, each of seventy feet span. It is 68 miles S of Carlisle, and 235 NNW of London. Lon. 2 56 W, lat. 54 3 N.

Lancaster, county of Pennsylvania, bounded by Cecil county in Maryland S; by the Susquehanna river SW; Dauphin

and Lebanon counties NW; Berks NE; and Chester E. Length 33; width 28; and area 928. Lancaster is a very diversified county in respect both to soil and surface. Several ranges of hills approaching the elevation, and rugged aspect of mountains intersect it from SW to NE. The creeks flowing generally SW, meander through the whole extent, and particularly the Conostoga, have margins of excellent soil. The staple productions are grain, flour, fruit, whiskey, peach and apple brandy, &c. Chief town, Lancaster.

Lapland, or the extreme northern part of Europe. It is divided into Russian and Swedish Lapland.

Russian Lapland extends E from Tornea and Tana rivers, to the White Sea, under the name of the circle of Koia.

Swedish Lapland embraces the residue including the extreme North Cape of Europe, and is subdivided into Tornea-Lapmark, Lulea-Lapmark, Pithea-Lapmark, Umea-Lapmark, Jämtland-Lapmark, Assele-Lapmark, and Finmark.

The whole of Lapland stretches over 150,000 square miles, of which Sweden possesses about 80,000, with 33,000 inhabitants, and Russia 70,000 square miles, and 27,000 inhabitants. Lapland may be termed a huge congeries of frightful rocks and stupendous mountains; interspersed, however, with many pleasant valleys, watered by an infinite number of rivalets that run into the rivers and lakes, which discharge themselves into the gulf of Bothnia. The names of the principal lakes in Lapland are the Gr-at Uma, the Great Windel, the Oreavan, the Storavan, the Great Lulea; the lakes of Kartom, Kaki, Torno, Enara, and Kimi. Some of these extend 60 leagues in length, and contain a great number of islands: Storavan is said to contain 365; and Enora contains an archipelago of islands so large, that no Laplander has lived long enough to visit each particular island. The natives believe this country to be the terrestrial paradise; and indeed nothing could be more enchanting than such vast prospects of mountains, hills, forests, lakes, rivers, &c. if the country was in a moderate climate; though even here, in summer the roses are seen blowing wild on the banks of lakes and rivers, with all the beautiful glow of colour which appears in those cultivated in our gardens. But all the intervals between the mountains are not engrafted by these agreeable prospects; great part of the flat country is covered with brown dusky forests of fir and pine trees; and these are often skirted by wide extended morasses, the stagnating waters of which in summer produce myriads of mischievous insects, that are more intolerable than even the cold of winter. The cold in this country is very intense during the winter, freezing even brandy and the watery part of spirit of wine, if the latter is not highly rectified; all the lakes and rivers are frozen to a prodigious thickness; and the whole face of the country covered with snow. The heat of summer is almost as intolerable as the cold of winter. At the northern extremity of the country the sun never sets for three months in summer, and in winter there is an uninterrupted night of the same duration; but this is qualified in such a manner by a constant revolution of dawn and twilight, by a serene sky, moon-light, and aurora borealis, reflected from the white surface of the earth covered with snow, that the inhabitants are enabled to hunt, fish, and proceed with their ordinary occupations. The country abounds with excellent springs; and is remarkable for some surprising cataraets, in which the water rumbles over frightful precipices, and dashes among rocks with amazing impetuosity and noise. Its soil is generally so chilled and barren that it produces little or

no grain or fruit-trees of any kind. This sterility, however, is not so much owing to the soil, which is in many places of a rich mould, as to want of industry and the rigor of the climate.

In stature, appearance, and manners, the Laplanders are evidently a branch of the family so extensive, within and contiguous to the Arctic regions. The Samoids, Laplanders, Greenlanders, and Eskimaux, are the great divisions of this race.

Leech Lake, lake of the NW territory of the United States, discharging its waters into the Mississippi river from the N, a short distance above the falls of Pegagama. It lies about 18 degrees W from Washington, lat. 48 N.

Leeds, town of the West Riding of Yorkshire, England, in a vale, which trade has rendered one of the most populous spots in England, and is the principal of the clothing towns in Yorkshire. It is particularly the mart for the coloured and white broad cloths, of which vast quantities are sold in its cloth-halls. Leeds has a manufacture of camlets, which has declined, and a flourishing one of carpets resembling those of Wilts and Scotland. Here are also some mills for the cutting of tobacco, and a great pottery. Within three miles of the town are numerous collieries. Leeds has a magnificent stone bridge over the Aire, which is navigable for boats, that carry much coal from hence to York and Hull. It is 22 miles WSW of York, and 192 N by W of London. Lon. 1 29 W, lat. 53 48 N.

Leeds, township of Buckingham county, Lower Canada, on Becancour river, and between Broughton and Inverness, 40 miles S from Quebec.

Leeds County, Upper Canada, is bounded on the east by the county of Grenville; on the south by the river St. Lawrence, and on the west by the boundary line of the late township of Pittsburgh, running north until it intersects the Ottawa or Grand river; thence descending that river, until it meets the north-westernmost boundary of the county of Grenville.

Leeds Township, in the county of Leeds, Upper Canada, is the twelfth township in ascending the river St. Lawrence.

Leeds, township of Kennebec county, Maine, on the Androscoggin, 20 miles SW from Augusta. Population in 1820, 1369.

Leetakoo, recently discovered town of South Africa, in the country of the Boshwanas. It was discovered in 1801, and since visited by Dr. Lechsteinstein, and Mr. Campbell. It is supposed to contain from 7 to 8000 inhabitants. Lon. 27 E, lat. 25 30 S.

Leeward Islands, that part of the Caribbee Islands, in the West Indies, commencing at Dominica, and extending to Porto Rico.

Leeuwe, fortified town of Austrian Brabant, seated in a morass, on the Geete, 12 miles E of Lovain. Lon. 5 7 E, lat. 50 53 N.

Leghorn, city of Tuscany, and a bishop's see. It has one of the best harbours in the Mediterranean; its commerce is prodigious. The Jews, who are numerous and rich, have a handsome synagogue and schools; the Greeks and Armenians have churches of their own; and no religion is disturbed. The inhabitants are computed at 50,000. The streets are wide and straight, and almost all the houses of the same height. There are so many canals, that some have given it the title of New Venice. Near the harbour is a large building, in which they shut up every night the Turks and galley slaves. At a little distance is a light-house, on a small island. The trade consists of foreign goods, as cotton, sugar, cocoa, spices, sulphur, and alum; and in home productions, as essen-

ces, oils, wine, strawhats, cloth, jumper berries, oranges, lambs' and goats' skins, and coral. In 1741, this city suffered greatly by an earthquake. It is 145 miles NW of Rome, and 45 W of Florence. Lon. 10 28 E, lat. 43 33 N.

Legnago, town of Italy, in the Veronese, on the Adige. The town is populous, and carries on a considerable trade, particularly in grain, which is greatly facilitated by means of a canal from the Adige to the Po. It is 24 miles SE of Verona.

Le Goupe, seigniory, Northumberland, county, Lower Canada, on the left side of St. Lawrence, 54 miles below Quebec.

Lehigh, river of Pennsylvania, the NW branch of the Delaware. Its extreme northern sources are in the southern part of Wayne county, and in Luzerne county, near Wilkesbarre. Augmented by many mountain streams, it flows SW by comparative courses 25 miles to the mouth of Wrights mill creek; it thence turns to nearly S by a very serpentine course, but in a direct distance of about 20 miles to Lehigh-ton. Here it inflects to SE, and continues in that direction, 25 miles to Allentown or Northampton. At Allentown it once more turns nearly at right angles, and flows NE 15 miles to its entrance into the Delaware at Easton. The entire comparative course of this stream is 85 miles. From near its source to Trout creek it separates Pike and Luzerne counties. From Trout creek, to Rock Eddy falls it separates Northampton from Luzerne county. Below the Rock Eddy falls to its passage through the Blue or Kittatinny mountain, its course is within Northampton county. Between its passage through the mountain, and the mouth of Hockendocque creek, it forms the limit between Lehigh and Northampton county. Below Hockendocque creek to Bethlehem it flows through Lehigh and below Bethlehem to Easton, in Northampton county.

The Lehigh is truly a mountain stream, and meanders through a series of natural scenes not excelled if equalled in the United States. The following table will exhibit its descent from Stoddartsville to its mouth.

The Lehigh Coal and Navigation company have been for several years employed to render this stream navigable from

the mouth of Mauch Chunk creek to Easton, in order to transport to Philadelphia and other places, the immense treasures of Anthracite coal imbedded in a mountain, about nine miles from the mouth of the creek. See *Mauch Chunk*, and *Northampton county*.

Lehigh, county of Pennsylvania, bounded SE by Bucks; SW by Montgomery and Berks; NW by Schuylkill and Northampton; and NE by Northampton. Length 25; breadth 13; and area 335. The surface of this county is highly picturesque and varied. Except the two southeastern townships Upper Milford and Upper Saucon, the residue of this country lies in the valley between South Mountain and the Blue or Kittatinny Mountain. The valley section is nearly equally divided between the Limestone and Clay slate formations so frequently mentioned under various articles in this Gazetteer. The soil, particularly on the limestone tracts is excellent. The whole county with but partial exceptions is well adapted to the culture of grain, grass and fruits, though in many places the surface is excessively broken. Staples, grain, flour, whiskey, fruit, salted meat, &c. Chief town, Allentown or Northampton.

Leibnitz, town of Germany, in Stiria, seated on the Salm, 16 miles S of Gratz.

Leicester, town of Massachusetts, in Worcester county, with a considerable manufacture of wool cards, six miles NNW of Worcester.

Leicester, borough and the capital of Leicestershire, governed by a mayor. The combing and spinning of wool, and making it into stockings and other articles, is the chief business of this town and neighbourhood. A canal passes hence by Loughborough to the river Trent. At a parliament held here, in the reign of Henry V. was made the first law for the burning of heretics. In the meadows near the town,

are the ruins of an abbey, in which cardinal Wolsey died. In 1811, Leicester contained 23,146 inhabitants. It is seated on the Soar, 23 miles S by E of Derby, and 98 NNW of London. Lon. 1 8 W, lat. 52 38 N.

Leicester, township and post town of Worcester county, Massachusetts, seven miles SW of Worcester, and 54 in the same direction from Boston. It contains several places of public worship, an academy, and extensive manufactory of wool cards. It contained 1181 inhabitants in 1810, and in 1820, 1252.

Leicester, township of Livingston county, New York, on Genesee river, about 25 miles SE from Batavia. The villages of Moscow and Mount Morris are in this township. Population 1820, 1331.

Leicestershire, county of England, 38 miles long and 30 broad, bounded on the N by Nottinghamshire, E by the counties of Lincoln and Rutland, S by Northamptonshire, SW by Warwickshire, and NW by Derbyshire. It contains 522,240 acres is divided into six hundreds, and 196 parishes, has 12 market-towns; and sends four members to parliament. In 1811, the number of inhabitants was 150,419. The chief rivers are the Avon, Soar, Wreke, Anker and Welland; and it has several canals. The sheep bred here, and in Lincolnshire, are the largest mutton with which the London markets are supplied, and have the greatest fleeces of wool of any in England. Nor is the wool less fine on account of its quantity; it has the longest staple in the whole island, some few places excepted. The horses bred, or rather fed here, are the largest in England, being generally the great black dray horses, of which great numbers are continually sent to London. The manufacture of stockings is the principal one in the county. Population 1801, 131,081; in 1811, 150,419; and in 1821, 174,571.

Leigh, town in Lancashire, seven miles NNE of Warrington, and 191 NW of London.

Leighton-Buzzard, town in Bedfordshire. It is seated on a branch of the Ouse, 13 miles S of Bedford, and 41 NW of London. Lon. 0 35 W, lat. 51 55 N.

Leinengen, town of Germany, in the palatinate of the Rhine, seven miles SW of Worms. Lon. 8 22 E, lat. 49 30 N.

Leina, river of Germany, which flowing through Brunswick Lunenburgh, falls into the Aller.

Leinster, eastern province of Ireland, bounded by Ulster on the N; St. George's

or the Irish Channel, on the E and S; and by the provinces of Connaught and Munster on the W. The capital city of this province and of the kingdom is Dublin. It contains 12 counties, viz. Carlow, Dublin, Kildare, Kilkenny, King's county, Longford, Louth, Meath, Queen's county, Westmeath, Wexford, and Wicklow. It is the most level and best cultivated province in the kingdom; containing 2,642,258 Irish plantation acres; 858 parishes, 99 baronies, and 53 boroughs; it is about 124 miles long and 74 broad, and extends from 51 45 to 55 45 N lat.

Leipheim, town of Suabia, in the territory of Ulm. Its vicinity produces good hops, and it stands on the S bank of the Danube, 10 miles NE of Ulm.

Leipnic, walled town of Moravia, near the river Beczwa, 14 miles ESE of Olmutz.

Leipsic, city of Upper Saxony, in Misnia, with a famous university, and a strong citadel, called Pleyssenburg. It carries on a considerable trade; and has three great fairs every year, which last a fortnight each. Its principal manufactures are silk, gold and silver stuffs, linen and cotton printing, leather and paper. The number of inhabitants exceeds 30,000; and the houses, in general, are lofty buildings. There are six handsome colleges belonging to the university, beside the private colleges; and the exchange is a fine structure. Leipsic was taken by the Prussians in 1745 and 1756. The Austrians, in 1756, besieged it in vain; they took it two years after, but were soon obliged to give it up. Leipsic is celebrated for two of the greatest battles recorded in history, having been fought in its vicinity, between the French and allied armies, on the 16th and 18th of October, 1813, and which are followed by the capture of the town, and the rear-guard of the French army, on the following morning, and also the king of Saxony and his family, who were made prisoners. It is seated in a plain, on the river Pleyse, 60 miles WNW of Dresden. Lon. 12 20 E, lat. 51 19 N.

Leiria, town of Portugal, in Estramadura, and a bishop's see, with an ancient castle on an eminence. It is 80 miles NNE of Lisbon. Lon. 8 34 W, lat. 39 48 N.

Leisnig, town of Upper Saxony, in Misnia, with manufactures of cloth, lace, stockings, &c. It is seated on the Mulda, 24 miles ESE of Leipsic, and 32 NW of Dresden.

Leitenberg, town of Upper Saxony, in Thuringia, with a castle on a mountain. It is seated on the Sorbitz, 11 miles SSE of Saalfeld.

Leith, seaport of Scotland, on the frith of Forth, two miles NNE of Edinburgh, of which it is the port. It is situate at the

mouth of the river Leith, which forms the harbour, and divides the town into N and S Leith, which communicate by a drawbridge. The harbour is secured by a noble stone pier at the mouth of a little river, called the Water of Leith; and is accommodated with an elegant drawbridge and a good quay. The commerce of Leith is very considerable; and the vessels employed in the London trade are, in general, of a large size, but the largest ships are those employed in the Greenland whale fishery. To Germany, Holland and the Baltic, are exported lead, glass ware, linen, woollen stuffs, and a variety of other goods; as also to the other countries of Europe, the W. Indies and America. Ships of great size are built at this port; and here are several extensive ropewalks. There are also flourishing manufactures of bottle-glass, window-glass, and crystal; a great carpet manufactory, a soap-work, and some iron forges. There are three churches in Leith, and an ancient hospital for disabled seamen. Lon. 3 7 W, lat. 56 0 N.

Leitrim, county of Ireland, in the province of Connaught, bounded on the N by Donegal Bay, on the NE by Fermanah, on the E by Cavan; by Longford on the SE, Roscommon on the SW, and Sligo on the W. It is 42 miles long, and 17 broad; is a fertile country, and, though mountainous, produces great herds of black cattle, but contains few places of note. It contains 21 parishes, and sends six members to parliament.

Leitrim, county town of Leitrim, in Ireland; pleasantly situated on the river Shannon, 80 miles from Dublin, and appears to have been formerly a place of some note. Lon. 8 30 W, lat. 53 57 N.

Leixlip, town of Ireland, in the county of Kildare, seated on the Liffey. It has a noble castle, with large gardens, on one side of which is a fine waterfall, called the salmon leap. Near it are the ruins of the church and castle of Confy. Leixlip is eight miles W of Dublin.

Lemnos, one of the principal islands of the Archipelago, now called Stalimene. It lies at the entrance of the Dardanelles, and has a town of the same name, which is capital of the island. It is about 25 miles in length, and 15 in breadth, and belongs to the Turks. The soil is pretty fertile, especially in corn and wine, and is famous for an earth called Terra Sigiliata, formerly in greater esteem among physicians than at present. It contains about 75 villages, whose inhabitants are almost all Greeks, and are very industrious. Lemnos or Stalimene is but a small town, standing on the declivity of a hill, on the top of which there is a castle, near the sea. It is the see of a Greek archbishop, and is 20 miles SE of mount Athos, whose shadow covers it a little before sunset, and 55 NW of Metelin. Lon. 25 28 E, lat. 40 3 N.

Lemon, one of the north eastern townships of Butler county, Ohio. Population in 1820, 2133.

There are in Litchfield 6 fulling mills, 5 or 6 tanneries, 18 or 20 saw mills, 4 forges, one slitting mill, 1 or 2 nail factories, and 14 or 15 places of public worship. This town contains also, Morris' academy, a flourishing and very respectable institution. In Litchfield village, is a seminary for the education of young ladies, which has long, and continues to hold a distinguished rank amongst similar institutions in the United States. The Litchfield Law school, was established in 1784, by the honourable Tapping Reeve, and has become one of the most systematic Law schools in the United States.

Litchfield, post village, Grayson county, Kentucky, 70 miles SSW from Louisville.

Lithuania, former name of an extensive country of Europe; bounded on the S by Volhinia, and part of Red Russia; on the W by Upper Poland, Polacia, Ducal Prussia, and Samogitia; on the N by Livonia; and on the E by Russia. It is about 300 miles in length, and 250 in breadth, and is watered by several large rivers, the principal of which are the Dnieper, the Lewina, the Niemen, the Pripecz, and the Begg. It is a flat country, like Poland; and the lands are very proper for tillage. The soil is not only fertile in corn, but it produces honey, wood, pitch, and vast quantities of wool. This perhaps, is the only country in Europe, where Jews cultivate the ground. The peasants are in a state of the most abject vassalage. In 1772 the empress Catharine compelled the Poles to cede to her all that part of Lithuania, bordering upon Russia, and including at least one third of the country. This she erected into the two governments of Polosk and Mohilef. In 1793, in conjunction with the king of Prussia, she affected another partition of Poland, in consequence of which she extended her dominions over the whole of Lithuania. It forms at present the Russian governments of Wilna, Grodno, and Minsk.

Litiz, town of the state of Pennsylvania. Here is a flourishing settlement of the Moravians, begun in 1757. It is eight miles from Lancaster, and 70 W of Philadelphia.

Little Beaver Bridge, post village, of Columbiana county, Ohio.

Little Cape Capon, post village, Hampshire county, Virginia.

Little Creek, township of Sussex county, Delaware. Population in 1820, 2851.

Little Darby, considerable western branch of Big Darby, rising in the northwestern quarter of Madison county, Ohio, and running southeastwardly into the western side of Big Darby, opposite Georgesville. Along the borders, and westward of this stream are extensive bodies of open prairie land; much of which is fertile and valuable.

Little Egg Harbour, township of Burlington county, New Jersey. Soil generally sandy, though well cultivated near the coast. The sandy land in the interior, covered with pine and oak timber. Principal town, Tuckerton. Population in 1820, 1102.

Little Egg Harbour, or *Mullican's River*, rises in Burlington and Gloucester counties, New Jersey, by a number of creeks which unite 11 or 12 miles from the sea, and separating the two preceding counties, falls into Little Egg Harbour inlet, $2\frac{1}{2}$ miles SE from Tuckerton. It is navigable for shallows as high as Basto furnace.

Little Egg Harbour, bay or inlet, a sheet of salt water separated from the Ocean by Tucker's Island and Long Beach. It communicates with the Ocean by the Old and New Inlet of Little Egg Harbour.

Little Egg Harbour, new inlet, lies $7\frac{1}{2}$ miles due S from Tuckerton, admits vessels of from 15 to 18 feet draft, many of which during the late war, entered and discharged valuable cargoes. The old inlet to the N from Tucker's island, is now but little used, except for very light vessels.

Little Hockhocking, an inconsiderable stream in the south part of Washington county, Ohio, running into the Ohio river, five miles above the mouth of the Great Hockhocking.

Little Indian creek, small stream of Clermont county, Ohio, putting into the Ohio river, two miles below Big Indian creek.

Little Miami, river rising in the southwestern corner of Madison county, and after

running southwest above 70 miles across Clark, Green, Warren and Hamilton counties, joins the Ohio seven miles above Cincinnati. It is one of the best mill streams in the state; 30 or 40 mills, among which two or three are paper mills, are already erected upon it. The principal streams running into it are, East branch, Shawnee, Obannon, Turtle, Todd's fork, Caesar's and Massie's creeks on the eastern side, and Sugar and Beaver creeks on the west. For navigation, it is of little consequence, but for mills, is preferable to the Great Miami.

Little Missouri, the name of two rivers of the United States; one a branch of Missouri, joining that stream from the SW, 90 miles above the Mandan villages; and the other, a branch of Washitau, in Arkansas, rises with the Little river of the north, flows E, and falls into the Washitan from the west.

Little River, is the name of several small streams in the United States. Little Red river, a branch of White river in Arkansas; Little river one of the constituents of Pedee, rises in North Carolina, and in part of its course separates North Carolina from South Carolina. Livernore, post village and township, Oxford county, Maine, 18 miles NE from Paris. Population in 1820, 2134.

Liverpool, borough and seaport of England, in Lancashire, with a market on Saturday. It had but one church, which was a chapel of ease to Walton (a village three miles off) till the year 1699, when an act passed to make the town a distinct parish, and erect a new church; since which time it has been gradually advancing in population and trade. The number of the inhabitants in 1773 was 34 407, in 1799 it was 55,732, in 1801 77,653, and in 1811 no less than 94,376. Its rise and increase was principally owing to the salt-works; and it is now become, with respect to population and commerce, the second port in the kingdom. It is seated on the river Mersey, and has a harbour, formed with great labour and expense, here being eight wet docks, secured by large flood-gates, bound by keys, a mile and a half in length, where 1000 vessels, or 20,000 tons of shipping, may lie in the greatest safety. The trade of Liverpool is general; but the principal branch is the African and West Indian trade. The American, Baltic, and Portugal commerce is also very great, as well as that of Ireland; many ships are sent to the Greenland whale-fishery; the coasting trade employs a great number of vessels; and many good ships are built here. By the late inland navigation, Liverpool has communication with the rivers Dee, Ribble, Ouse, Trent, Humber, Severn, and Thames. Its principal manufactures are fine porcelain, earthen ware, watches, and stockings, some glass, iron, salt, and copperas works, many roperies, and upwards of fifty breweries. The exchange is a handsome modern edifice of stone, with piazzas for the merchants; and over it is the town-hall. There is also a handsome exchange, a custom-house, an assembly room, an elegant theatre, a library, and a borough jail on Mr. Howard's plan. Beside the two parochial churches, there are ten other churches for the established religion; also Roman Catholic chapels, and dissenting meeting-houses. To enumerate the asylums for the wretched and unfortunate of every description and denomination,

would far exceed our bounds. Liverpool is 48 miles S of Lancaster, and 202 NW of London. Lon. 3 0 W, lat. 53 22 N.

Livingston, township of Columbia county, New York, containing 1651 inhabitants in 1810, and in 1820 1938. It is situated 40 miles S of Albany, on the river Hudson.

Livingston, county of New York, on both sides of Genesee river; bounded S by Steuben and Allegany; W by Genesee; N by Monroe; and E by Ontario. Length 30; width 20; and area 600 square miles. In respect to soil and surface, this is a very diversified county. It is generally hilly and fertile; but exceptions to both these features exist; extensive flats skirt Genesee river, and part of the upland is sterile. This county was formed from part of Ontario and Genesee, in which it was included in the census of 1820.

Livingston, county of Kentucky; bounded by Tennessee river SW; by Ohio river W and NW; by Trade Water river or Union county NE; and Caldwell county SE. Length 47; mean width 15; and area about 720 square miles. Cumberland river passes through and enters Ohio river in this county. The surface is generally level, and much of the soil highly fertile. Chief town, Salem.

London, metropolis of Great Britain, one of the largest and most opulent cities in the world, mentioned by Tacitus, as a considerable commercial place in the reign of the Roman emperor Nero. In its most extensive view, as the metropolis, it consists of the City, properly so called, the city of Westminster, which was once a mile from London, and the borough of Southwark; beside the suburbs in Middlesex and Surry, within what are called the bills of mortality. London and Westminster are situated in Middlesex, on the N side of the river Thames. Southwark is situated on the opposite bank, in Surry. The extent of the whole, from Lime-house and Deptford to Milbank and Vauxhall, is above seven miles; but the greatest breadth does not exceed three. Among the public buildings, St. Paul's cathedral is the most conspicuous. It is 2292 feet in circumfer-

ence, and 365 in height to the top of the cross. It is inferior to none in Europe, except St. Peter's at Rome. It is now destined to be the receptacle of the monuments of such illustrious men, as may do honour to their country by their talents and their virtues; several are already erected; the first, for that great philanthropist. Mr. John Howard. Westminster Abbey is a grand specimen of Gothic architecture, said to have been founded by Sebert, king of the East Saxons, in 610. Here most of the English sovereigns have been crowned, and many of them interred. It contains also a great number of monuments of kings, statesmen, heroes, poets, and persons distinguished by genius, learning, and science. The chapel of Henry VII. adjoining, Leland calls *The Wonder of the World*. St. Stephen's, Walbrook, is a small church, of exquisite beauty, the masterpiece of Sir Christopher Wren. Bow Church, in Cheap-side, St. Bride's, in Fleet Street, and St. Dunstan's in the East, and St. Martin's in the Fields, are, with several others, distinguished for fine architecture. The parish churches, in the bills of mortality, amounted to 145; namely, 97 within the walls, 16 without the walls, 23 out-parishes in Middlesex and Surry, and 10 in the city and liberties of Westminster. Besides these churches, is one belonging to the Temple, a celebrated seat of law. It was founded by the Knights Templars, in the reign of Henry II upon the model of that of the Holy Sepulchre, at Jerusalem. There are likewise a great number of chapels for the established church, foreign protestant churches, Roman catholic chapels, meeting for dissenters of all persuasions, and three synagogues for the Jews. The royal palace of St. James is an ancient building, and on the N side of a small park: it is mean in external appearance, but the apartments are said to be the best calculated for regal parade of any in Europe. The royal town residence is a house on the W side of James' park, built by the duke of Buckingham, and purchased by the king in 1761, when it received the appellation of the Queen's Palace, but is still frequently called Buckingham House. Carlton House, the residence of the prince of Wales, to the E of St. James' palace, is a stately building, on which vast sums have been expended. The Banqueting House, at Whitehall, begun in 1619, is only a small part of the vast plan of a palace, intended to be worthy of the residence of the British monarchs, but left incomplete. Beside the royal palaces, there are many fine houses of the princes of the blood, and of the nobility and gentry. The Tower of London is very ancient, but the founder is uncertain. It is surrounded by a wall, and

partly by a deep ditch, which enclose several streets, besides the Tower, properly so called: it contains the great artillery, a magazine of small arms for 60,000 men, and the large horse armoury, among which are 15 figures of kings on horseback. Here are the jewels and ornaments of the crown, as well as the regalia; the mint for coining of money, and the menagerie for foreign birds and beasts. It is under the command of a constable and lieutenant. The bridges are a great ornament to the metropolis. The most ancient, London bridge, was begun in 1176, and finished in 1209. The length of it is 915 feet. The number of arches was 19, of unequal dimensions, and deformed by houses on each side, which overhung in a terrific manner. These were removed in 1756, when the upper part of the bridge assumed a modern appearance; but the sterlings remain, though they so contract the space between the piers, as to occasion, at the ebb of tide, a fall of five feet, or a number of temporary cataracts which have occasioned the loss of many lives. Westminster bridge, one of the finest in the world, was built by Labeyle, a native of Switzerland. The first stone was laid in 1759, the last in 1747; but on account of the sinking of one of the pier, the opening of the bridge was retarded till 1750. The whole is of Portland stone, except the spandrels of the arches, which are of Purbeck. It is 1223 feet in length. It has 13 large, and two small semicircular arches: the centre arch is 76 feet wide; the other arches, on each side, decreasing in width four feet. Blackfriar's bridge, built by Mylre, was completed in 1768. Its length is 995 feet; the breadth of the carriage-way 28, and of the foot-paths seven feet each. It consists of nine elliptical arches, the centre one of which is 100 feet wide; and both this, and the arch on each side, are wider than the celebrated Rialto at Venice. This noble structure is built of Portland stone. Among the other public buildings, which can merely be enumerated here, are Westminster Hall, containing the supreme court of justice; and adjoining to which are the houses of lords and commons; the Guild-hall of the city; the Sessions House; the Horse Guards, the Treasury and the Admiralty at Whitehall; the noble collection of public offices which form that magnificent structure called Somerset Place; the British Museum; the Royal Exchange; the Bank of England; the Excise Office; the East India House, the South Sea House; the Mansion House, for the lord mayor; and the Monument, in commemoration of the great fire in 1666. The Inns of court for the study of the law; the colleges, learned societies, and public seminaries; the halls of the different trading compa-

nies; the noble hospitals and other charitable institutions; the public places of diversion; with its fine squares and streets, are all too numerous to be here particularly mentioned. The Adelphi Terrace is the admiration of foreigners, for the noble view which it affords of the river, the bridges, and other public buildings, and of the fine hills beyond Lambeth and Southwark. Such, on a cursory view of it is the metropolis of Great Britain, to the extent and opulence of which many causes have contributed. The broad stream of the Thames flowing between London and Southwark, continually agitated by a brisk current, or a rapid tide, brings constant supplies of fresh air, which no buildings can intercept. The country around, especially on the London side, is nearly open to some distance; whence by the action of the sun and wind on a gravelly soil, it is kept tolerably dry at all seasons, and affords no lodgement for stagnant air or water. The cleanliness of London, as well as its supply of water, is greatly aided by its situation on the banks of the Thames; and the New River, with many good springs within the city itself, further contributes to the abundance of that necessary element. All these are advantages with respect to health, in which this metropolis is exceeded by few. Its situation, with regard to the circumstance of navigation, is equally well chosen; had it been placed lower on the Thames, it would have been annoyed by the marshes; had it been higher, it would not have been accessible, as at present, to ships of large burden. It now possesses every advantage that can be derived from a sea-port, and, at the same time, by means of its noble river, enjoys a very extensive communication with the internal parts of the country, which supply it with necessaries, and in return receive from it such commodities as they require. It contains several large wet docks, particularly those called the West India and East India, Wrapping, and Commercial docks, dry docks for repairing, and slips for building of ships, besides the king's yards at Deptford, for building men of war. London therefore unites in itself all the benefits arising from navigation and commerce, with those of a metropolis at which all the public business of a great nation is transacted; and is thus both the mercantile and political head of the kingdom. It is also the seat of many considerable manufactures; some almost peculiar to itself as administering to the demands of studied splendour, and refined luxury; others in which it participates with the manufacturing towns in general, with this difference, that only the finer and more costly of their works are performed here. The most important of its peculiar

manufactures is the silk weaving established in Spitalfields by refugees from France. A variety of works in gold, silver, and jewellery, the engraving of prints, and making of optical and mathematical instruments, are likewise principally executed here, and some of them in greater perfection than in any other country. The porter-brewery, a business of very great extent, is also chiefly carried on in London. To its port (late-ly much improved in various respects) are likewise confined some branches of foreign commerce, as the vast East India trade, and those to Turkey and Hudson's bay. Thus London has risen to its present rank of the first city in Europe with respect to opulence and the number of inhabitants. By the enumeration in 1811, the residents in London, Westminster, and Southwark, and all the out parishes, were 1,009,546. London is a bishop's see, and sends four members to parliament. The city is divided into 26 wards, each governed by an alderman; and from the aldermen the lord mayor is annually chosen. There are likewise 236 common-councillmen, a recorder, a common-sergeant, two sheriffs (who are also sheriffs of Middlesex) a chamberlain, a town-clerk, a city remembrancer, a water-bailiff, and many inferior officers. Westminster is governed by a high steward, who is generally a nobleman, chosen by the dean and chapter, and he has an under steward who officiates for him. Next to him is the high bailiff, chosen also by the dean and chapter, whose power resembles that of a sheriff. The suburbs are under the jurisdiction of magistrates; and those of Middlesex, beside the county-hall on Clarendon Green, have an office in Bow Street, long distinguished for public spirit and activity, and seven other public offices. Southwark was long independent of London, but Edward III. granted it to the city. It was then called the village of Southwark; and afterward named the bailiwick. In the reign of Edward VI. it was formed into a twenty sixth ward, by the name of Bridge Ward Without. On the death of the alderman of this ward, he is succeeded by the next in seniority, to whatever ward he may belong; this ward being considered as a sinecure, and consequently the most proper for "the father of the city." The city has likewise a high bailiff and steward here. To enumerate all the events by which this great capital has been distinguished, would greatly exceed our limits, we shall only mention the great plague in 1665, which cut off 68,596 people, and the dreadful conflagration, in 1666, by which the cathedral and many other churches, with 13,200 houses were destroyed. London is 210 miles NNW of Paris, and 300 ESE of Dublin. Lon 0 5 W, lat. 51 31 N.

Loretto, fortified town of Italy, in the marquise of Anconia, and a bishop's see. The cathedral contains the Casa Santa, or Holy House, in which it is pretended the Virgin Mary lived at Nazareth. According to the legend, it was carried by angels from Galilee into Dalmatia, and thence to the place where it now stands. This house, or chapel, is 31 feet long, 15 broad, and 18 high; the inner part very old, but cased with marble on the outside. The famous lady of Loretto, who holds the infant Jesus in her arms, stands upon the principal altar, in a nich of silver: this statue is of cedar wood, three feet high, but her face can hardly be seen, on account of the numerous gold and silver lamps around her. She is clothed with cloth of gold, set off with jewels; and the little Jesus is covered with a shirt, holds a globe in his hand, and is adorned with rich jewels. Great numbers frequently go on pilgrimage to Loretto, and every pilgrim, after having performed his devotion, makes the Virgin a present, that the treasury of the chapel is immensely rich. The inhabitants of this town subsist principally by agriculture and gardening, and many of them are shoemakers, tailors, and sellers of chaplets. Loretto was taken by the French in 1796, who retained possession of it till 1799. It is seated on a mountain, three miles from the gulf of Venice. 12 SE of Ancona, and 112 NE of Rome. Lon. 13 38 E, lat. 43 27 N.

Lorgues, town of France, in the department of Var, seated on the Argens, 16 miles W of Frejus.

L'Orient, fine seaport of France, in Morbihan, on Port Louis. The harbour is deep sufficient for ships of the first class. Population about 18,000, 340 miles W by S from Paris. Lon 3 21 W from London, lat. 47 45 N.

Lorrach, town of Suabia, in the Brisgau, six miles NE of Basel, and 30 S of Friburg.

Lorraine, late province of France, 100 miles long, and 75 broad; bounded on the N by Luxemburg and Treves, E by Alsace and Deux Ponts, S by Franche Compte, and W by Champagne and Bar. It abounds in all sorts of corn, wine, hemp, flax, and rape seed. There are fine meadows and large forests, with mines of iron, silver, and copper, and salt pits. The principal rivers are the Maese, Moselle, Seille, Meurte, and Sare. This province now forms the departments of Meurte, Moselle, and Vosges.

Lorraine, post village, and township of Jefferson county New York, 20 miles SSE from Sackett's harbour. Population 1820, 1,112.

Lossiemouth, town of Scotland, in Murrayshire, at the mouth of the river Lossie, five miles NE of Elgin, of which it is the port. The harbour will receive vessels of 80 tons, and hence much corn is exported.

Lot, river of France, which rises in the department of Lozere, passes by Mende, Cahors, and Agen, and enters the Garonne. It begins to be navigable at Cahors.

Lot, department of France, including the late province of Quercy. It takes its name from the river Lot. Cahors is the capital.

Lot and Garonne, department of France, including part of the late province of Guienne. It is so called from two rivers. Agen is the capital.

Lothiniere, seignior, Buckingham county Lower Canada, on the south side of St. Lawrence, 40 miles above Quebec.

Lothian, district of Scotland, now divided into East, Mid, and West Lothian, or *Haddingtonshire*, *Edinburghshire*, and *Linlithgowshire*.

Lotzin, town of Prussia, with a castle, situate on a canal which joins the Angerburg and Levantin lakes, 78 miles SE of Konigsberg.

Louans, small town of France, in the department of Saune and Loire and late province of Burgundy, situated in a kind of Island between the rivers Seilles, Salle, and Solnan, 18 miles SE of Chalons.

Loudeac, town of France, in the department of Cotes du Nord, with an iron forge, and a manufacture of thread, 20 miles S of St. Brieux.

Loudon, township of Rockingham county, New Hampshire, on the E side of Merrimack river, 45 miles NW of Portsmouth. Population in 1810, 1472, and in 1810, 1694.

Loudon, county of Virginia; bounded SE by Fairfax; SW by Prince William and Fauquier; NW by Frederick and Jefferson; and NE by the Potomac river. It is about 20 miles square, with an area of 400 square miles. Surface delightfully varied by hill, dale and mountain. Soil excellent. Staple grain and flour. Chief town, Leesburg.

The longest line which can be drawn in Louisiana, is from the mouth of Mississippi to the north-west angle of the state, 380 miles. Its width is very difficult to estimate; one hundred and twenty miles is not, however, far from an accurate mean.

The state of Louisiana contains perhaps as great diversity and extremes of soil as any country of the globe of equal extent. It is no misrepresentation to say, that in this state, every kind of land exists, from the most sterile to the most productive.

The very singular features of Louisiana, and its importance in our topography, will warrant a more widely extended range of descriptive remark, than I have judged necessary with other sections, more uniform in their interior, and more analogous in their exterior features to the contiguous countries.

The soil of Louisiana admits of five very distinct varieties; river alluvion, pine forest, prairie, river inundated land, and sea marshes. Of these the most extensive is pine forest, but the most valuable, alluvion. In Louisiana, the sea sand alluvion is so limited in extent, as not to merit a distinctive classification.

Commencing from the south, the first natural division which presents itself, is the sea marsh. This tract is commensurate with the entire extent of the state, reaching from Pearl to Sabine rivers. It is almost destitute of timber. Its width inland varies from 20 to 30 miles; extending highest into the interior between the streams. All the rivers which communicate with the Mississippi, in a lesser or greater degree, protruding a narrow slip of arable land along their shores, far beyond the interior limit of the sea marsh. None, however, extending this elevated border to the Gulf of Mexico.

The Atchafalaya has but very little arable land on its shores. Its left bank is above ordinary inundation four or five miles from its efflux, the right bank liable to annual submersion from the Mississippi. After flowing five miles, with the exception of a few spots of very limited extent, the shores of this river is rendered uninhabitable as far down as the mouth of the Teche. The arable shores of the latter river are continued about five miles down the former below their junction; the sea marsh then commences, and all farther habitable land ceases. Three or four miles below the mouth of Teche, on the opposite bank, the Atchafalaya receives Bayou Bœuf. This bayou is the drain of the space between the Fourche and Atchafalaya rivers, and has a narrow border of high land along its banks, over which the overflow of the Mississippi very seldom reaches; consequently all the water which is brought down by the Atchafalaya, is here confined to its own volume. This circumstance, though fact, is contrary to common opinion in the country itself. All the space between the Lower Teche and Lafourche is usually considered subject to annual inundation. It is so in fact, with

the exception of the range we have noticed. A chain of lakes lies between the Atchafalaya and Lafourche, through which, by a ferry, is formed the route of communication between the settlements on the Mississippi and Lafourche, and those in Lower Attacapas. The sunken flooded character of the shores of these lakes lead to the error we have corrected. In reality, Bayou Bœuf and its confluent separate in that quarter the inundated tract from the sea marsh.

In the angle between the bay of Atchafalaya and Lafourche river, a number of minor streams pad near Bayou Bœuf, and flow south into the Gulf of Mexico. These small creeks have all arable banks towards their sources, which gradually depress into the sea marsh.

The Lafourche has arable banks about 90 miles from its efflux from Mississippi, below which distance the sea marsh encroaches, and prevents settlement.

Between the high banks of Lafourche, and those of Mississippi river, with exception of a few small spots, the intermediate space is occupied by the sea marsh.

The Mississippi proper differs in ordinary phenomena, in no essential respect, except magnitude, from the Lafourche. The banks of both are the highest ground near their beds. The former carries its arable border with varied width, to the lower end of Plaquemine bend, three miles below Fort St. Philip, where the naked unwroded sea marsh reaches the river bank.

North east of the Mississippi, the sea marsh borders the river to Plaquemine bend, where the arable selvaige commences, which with a breadth of not more than 700 or 800 yards, intervenes between the river and marsh, to Terre aux Bœufs, 15 miles below New Orleans. Terre aux Bœufs extends an arable border for about 15 miles, where the sea marsh reaches both its banks, and terminates settlement.

Above Terre aux Bœufs, the arable border is wider than below that stream; but is confined to the Mississippi banks, as far up that stream, as the higher part of the parish of St. John Baptiste, opposite Lake Maurepas. In the distance from Terre aux Bœufs to St. John Baptiste, the marsh is only interrupted in one place. Ten miles above New Orleans, an ancient outlet of the Mississippi pursues a north-east direction, and singular as it may seem, actually crosses Bayou St. John, in the suburb of that name, and continues its original direction by the name of Bayou Gentilly, and falls into the pass of Chef Menteur. Its entire length, about 20 miles. On a small scale, this outlet in its natural state, had an elevated arable wood-

ed border in all its course. With this very partial exemption, the marsh reaches within a mean of half a mile from the Mississippi bank. The whole south, and south-west borders of Lakes Pontchartrain and Maurepas form one undivided marsh. This marsh, towards New river, imperceptibly changes to river inundated land.

The general interior boundary of the sea marsh, from what we have seen, proceeding from west to east, extends from the head of the Sabine, Calcasieu, and Mermentau lakes; from the latter to the western bend of Vermilion; the right shore of the latter river extending a narrow arable border about twenty miles lower down. A range of low hills or high banks ranges along the left side of the Vermilion, but sinks into the sea marsh ten miles above the southern extension of the cultivateable opposing margin.

Leaving the Vermilion river, the marsh winds round the inflections of the bays of Vermilion, Côte Blanche, and Atchafalaya, leaving those bays to the south west, and the Teche river to the south-east, advancing in many places to within one or two miles of the latter. At the junction of Teche and Atchafalaya rivers, we have shown the sea marsh to be bounded inland by Bayou Beuf, and its constituent branches, between the Atchafalaya and Lafourche rivers. Between the latter and Mississippi, more than nine-tenths of the entire space is marsh. The same observation is applicable to all that part of the island of Orleans, below the parish of St. John Baptiste.

It would be an interesting operation to determine the extent of the irreclaimable sea marsh. The solution of this problem is impracticable, however, to any great exactitude, without extraordinary and unnecessary expense of time and labour. The following estimate will serve for every requisite purpose.

Between the Sabine and Lafourche rivers, is a distance of 180 miles. In this space, the sea marsh and bays will average at least 30 miles in width, producing an area of 5,400 square miles, 3,456,000 acres, or near one-ninth part of the superficies of the state.

North-east of the Lafourche, the sea marsh extends over at least 3,000 square miles, or 1,920,000 acres, which added to 3,456,000, yields 5,376,000 acres, or nearly one-sixth part of all Louisiana.

The distinction between sea marsh and the contiguous soils, arises solely from relative height. There is no part of the maritime shore of the United States, which rise so gradually from the surface of the sea as do those of Louisiana. This acclivity is in fact, so gentle, that the common surface of the country at Opelousas court-

house, 70 miles inland, is not more than twenty feet above the level of the Gulf of Mexico. The very near advance of such a country to the curve of a real sphere, will be conceived, when it is considered that 70 miles contains 369,600 feet, or that in round numbers, 400,000 feet has only gained an elevation of 20 feet; that is one of elevation for 20,000 in distance. It is the natural consequence of so very gradual an ascent, to render the gradations of soil almost imperceptible. Therefore, the positive line which separates the sea marsh from the prairies, or river inundation, cannot be drawn.

The tides in the Gulf of Mexico, do not exceed three feet, and yet they are perceptible in all the water courses of Louisiana, Mississippi excepted, as high as North lat. 30 20. From this arises the singular phenomenon that the tides in Plaquemine and Iberville, approach to within ten miles of contact, though upwards of 200 miles above the head of tide water in Mississippi.

The prairie soil partakes of the quality of the adjacent lands. On the waters of Sabine, Calcasieu, and Mermentau, the prairies have generally a thin sterile soil; whilst on the Vermilion, Teche, and Courtableau, the prairies are almost uniformly fertile. Wherever the waters of Red or Mississippi have flowed, the soil is productive; and that both those rivers have contributed to form the deposit which lines the Teche, Vermilion, and Courtableau, is evident from the texture and alternation of the strata. The evidences of the prevalence of these waters in places far remote from their present influence, are seen in digging wells, where the pale blue sediment of the Mississippi is found in contact with the red ochreous earth, brought down by Red river.

We have already alluded to the probability, that, at a former period, the Mississippi and Red rivers did not unite. The soundness of this hypothesis, is rendered obvious by the general physiognomy of the country at present. But to an eye which has viewed with careful attention, the region between lower Red river, the prairies of Opelousas, and the Atchafalaya river, it must be demonstrable, that the former river once entered the latter through the channel of the present Courtableau, and that a long narrow peninsula extended from the highlands north of Red river towards the ancient junction. I have traversed this tract in all its extent, and formed the theory we are now reviewing from actual survey. The range of hills which now terminates at Red river, no doubt was once united to the opposing high ground of Avoyelles. The intermediate space

is not at this time more than two miles wide.

The elevation of the platform of Avoyelles is about 20 or 25 feet above the circumjacent low lands; its length 15 or 16 miles. There exists a small wooded hill, of similar height and structure, about five miles south of Lake Pearl. The hill and prairie of Bayou Rouge is the last remaining fragment of the ridge which anciently I suppose contributed to turn Red river south-eastwardly. What is at present Lake Pearl, and the Bayou le Mourir, and De Glaize, were once an outlet of Red river, according to the induction we have assumed. At high water the overflow of Red river yet passes by that channel. I have myself passed from Red river to Opelousas, through an outlet 15 miles below Alexandria into Bayou le Mourir, and thence up that stream into Bayou Boeuf, and down that stream to its junction with the Crocodile, or to the head of Courtableau river.

When Red river flowed in its ancient channel, the channel east of the Avoyelles was then occupied by the Ouachitta and Ocatahoola rivers; consequently, the junction of Red and Ouachitta did not then exist. The latter, it is probable, united with the Mississippi as at present, and the higher parts of Atchafalaya was a counter channel between Red and Mississippi rivers.

Whatever may have been, however, the natural revolutions of those streams, the surplus water of Mississippi must, from the superior elevation of that river at time of high water, have found its way to the Gulf of Mexico, as at present.

The river Teche is also one of the ancient outlets of Red river. The Teche is a small, but a singular and very interesting stream. Its sources are in the Opelousas prairies, near their extreme north extension. Draining the prairies, the Upper Teche, by the name of Bayou Grand Louis, reaches within three miles of the courthouse of that parish, where it forms the part of the higher parts of Opelousas. Three-fourths of a mile below the port, or as it is there designated Carron's Landing, the channel divides into two branches, one passing north into Courtableau river by the name of Bayou Carron, and the other continuing south-east forms the river Teche. When the Mississippi is low, most of the water of Bayou Grand Louis flows into Courtableau, and by that stream into Atchafalaya; on the contrary, when the Mississippi is even at moderate flood, part of the stream of Courtableau flows through the Carron, and is turned into the Teche. So that the water of Bayou Grand Louis, and in part that of Bayou Boeuf and Crocodile, contribute to form the rivers

Courtableau and Teche, alternately, following the stage of the Mississippi tide or flood.

Below its efflux from Bayou Carron, the Teche flows twenty miles, following its windings, receives Bayou Fusillier from Opelousas, and enters Attacapas. Below this point, the Teche receives no more tributary water; like the Mississippi, its banks are the highest adjacent ground; its course in Attacapas is about 115 miles, and though not augmented by any confluent stream, its volume increases in width from 20 to 200 yards. The tide rises at all times to New Iberia, N. lat. 30 2, and at dry seasons it is perceptible at the mouth of Bayou Fusillier. The comparative length of Teche in Attacapas is only 75 miles. Its banks are the most perfectly uniform of any water-course I ever examined. I have been along its entire channel from Bayou Carron to the mouth, and could never perceive a single instance of an abrupt bend, though so very remarkable for extensive curves, even comparatively more so than the Mississippi. It may be also noticed, amongst the peculiarities of the Teche river, that all its widely sweeping bends are turned towards the Mississippi, or rather Atchafalaya.

But the circumstance which is most worthy of attention in the natural history of the Teche, is the structure of its bed. Commencing with the junction of Bayou Carron and Courtableau river, and following the latter to the head of Teche, and down the latter to its mouth, the immensity of the channel, when compared with the volume of water which enters and flows through it, is every where striking. From the apex of the banks to the surface of the highest water, is at all places very considerable, and the distance between the opposing high banks four or five times greater than the most expansive breadth of the water. It is, nevertheless, obvious on inspection, that, at some former period, the whole channel was filled to overflowing. If the waters of Red river was again turned into its ancient course, the Teche would also again resume its former magnitude. It is strikingly obvious from actual examination, that the entire waters of Courtableau, could be turned with a very trifling expense down the Teche. And it could be also shown, that nature has afforded equal facility, to permit art to turn the latter into Vermilion.

I have been thus particular, in describing the rivers of this section of Louisiana, in order to enable the reader to comprehend more clearly the causes of the varieties of soil, and facility of navigation, so strikingly existing between the prairies and alluvial river lands, on the streams which have yet, or which once had, communication with

the Red, Mississippi, and Atchafalaya rivers, and those water-courses, which have not ever had connexion with those controlling waters.

We now proceed to examine the prairies of Louisiana in detail; but, before enumerating the prairies, we ought to review the rivers which drain or pass over their surface.

The Teche we have already examined. The next river west of the Teche, is the Vermilion. We have mentioned Bayou Fusillier as a branch of the Teche; it is, however, an outlet of the Vermilion, or perhaps more correctly an interlocking channel between the two rivers. The Vermilion rises at Opelousas court-house, and by the name of Bayou Bourbée, flows south ten miles, divides into two branches; that to the right, continuing south, forms Vermilion that to the left, turns east into Teche, and is the stream we have noticed as Bayou Fusillier. The Vermilion has a comparative course of seventy miles, receiving several small, but no considerable branches, and falls into the Bay of Vermilion. The woods are scanty on this stream in all its course; both its source and discharge are totally void of timber. Its banks are generally fertile, and, unlike those of Teche, are high, bold, broken, and diversified, above the termination of the timber and commencement of sea marsh.

The Mermentau is a much more considerable stream than either the Teche or Vermilion, and may not unaptly be viewed as the river of the prairies. It is formed by a number of branches, the principal of which are the Queue Tortue, Lacassine, Plaquemine, Brulé, Bayou Cane, and the Nezpique. The entire length of the Mermentau is about 100 miles; but the wide space over which its branches extend, give it a volume of more magnitude than its length would indicate. The tide rises in Mermentau, in a low state of its waters, above the junction of its principal branches. Below the mouth of Queue Tortue, the Mermentau expands into a long, narrow lake; timber ceases, the sea marsh commences. The river again contracts into a confined channel, and again opens into a lake of twenty miles long and ten miles wide, connected with the gulf by two channels. On the higher branches of Mermentau, the first secondary rock in Opelousas is found; it is a sandstone, loosely compacted.

I have already remarked that the soil of the prairies, beyond the influence of the interlocking waters of Mississippi, becomes of very inferior quality. The correctness of this observation is seen on every branch of the Mermentau. A list of the prevalent timber on the Teche and Vermilion, con-

trasted with that on the Mermentau, will amply develop the respective quality of the soil.

On the two former streams are found in abundance, hackberry, sycamore, willow laurel, magnolia, the black oak, upland white oak, honey locust, mulberry, black walnut, hickory several species, *liriodendron tulipifera*, sweet gum, cotton wood, dogwood, wild cheery, linden, ash, red flowering maple, sassafras two species, laurier almond, elm two species, &c. On the latter soil, sweet gum, linden, black walnut, honey locust, and black oak, *quercus tinctoria*, becomes rare, the *liriodendron tulipifera* entirely ceases. The prevalent timber trees are water oak, Spanish oak, black jack, upland shellbark hickory, and pine. On the former space, the under-wood is spice, Spanish mulberry, papaw (*morus scabra*), red elder, large reed cane, and muscadine grape vine; on the latter, whortleberry two species (*vaccinium stamineum*, and *vaccinium arboreum*), &c. The trees and shrubs common to both, are dogwood, persimon, holly (*ilex opaca*), iron wood, horn beam, chinquapin, laurier almond, and blackberry briar. Some reed cane is found on the waters of Mermentau, but of humble growth, and of very limited extent.

The live oak is common to both sections, but on the Teche this tree is found as high as Bayou Fusillier, whilst on the Vermilion, and Mermentau, it ceases ten or twelve miles further south.

The prairies of Louisiana, have been over-rated in extent, even including the sea marsh which we have noticed. Their irregular form renders an accurate estimate of their extent difficult. On a former occasion I carefully calculated the proper prairie land in the state to amount to 3,000 square miles, equal to 1,920,000 acres. I am confident that 2,000,000 of acres is a more than sufficient estimate of all the prairie ground in the state; which, if added to the extent allowed for sea marsh, 5,376,000 acres, yields 7,376,000 acres as the naturally unwooded surface in the state of Louisiana. This is, indeed, a fearful expanse, amounting to almost one-fourth part of the whole area; and of this superficies, not more than one million and a half of acres can be reduced to culture without enormous expense.

We now proceed to examine river inundated alluvion, another species of soil, which, though often confounded with sea marsh, under the term swamp, differs in most respects from either marsh or swamp.

The alluvial banks of the Louisiana rivers are all, in their natural state, more or less subject to inundation; therefore, as used in this place, some explanation is necessary,

to show the distinction between grounds casually submerged, and those which are so annually; and between those which admit being reclaimed, and those which are irremediably liable to be laid under water.

The distinction between the reclaimable and irreclaimable alluvion, does not consist merely in more or less exemption or exposure to water; the respective soils are different in texture and composition. The reclaimable alluvion is an inclined plane, sloping in all cases from the rivers by a very gentle descent; the irreclaimable alluvion is generally a dead level, extending indefinitely into the spaces between the streams. The arable river border is usually composed of a fine, loose, rich soil; the interior plains are composed of a very hard, stiff, and less fertile soil than the river borders; what is vulgarly, and very erroneously designated Mississippi swamp, becomes in most places, when laid dry, almost as solid as a stone. Except the sea marsh I have surveyed, very little swamp, in the true intent of the term, exists in Louisiana.

The natural vegetables found on the two varieties of alluvion, are strikingly different. The trees ordinarily found most prevalent on the reclaimable river borders are: laurel magnolia, black oak, white oak, red elm, mucilaginous elm, sycamore, honey locust, sweet gum, ash, blackberry, poplar, black walnut, white oak two varieties, white bitter nut hickory two species, cotton wood tree, linden, red maple, box elder, iron wood, horn beam, red bud, wild cherry, sassafras, laurier almond. The common undergrowth is the large reed cane, spice wood, many different kinds of grape vine and smilax, and a species of cornus called swamp dogwood, yet never found in swampy places and very seldom on overflowed land.

Another very common, and yet very erroneous opinion, is current respecting the large reed cane of the Mississippi basin. This noble vegetable is supposed to flourish on the annually inundated soil; so far from this being the habitude of that grass, that few vegetables will more certainly or more rapidly perish if its roots are laid under water; it is, perhaps, of all grasses, the one which would continue to vegetate longest without rain. In all my range of observation, I never once witnessed cane of any size or quantity, worthy notice, on the annually flooded lands. I have also uniformly observed, that when the ground covered by a cane-brake became exposed to submersion, the cane perished from the casualty.

In the rear of the river border, and after the cane has ceased, its place is usually supplied by what is designated in the

country, by the English name, Palmetto, in French, latania; a species of the chame-rops of botanists.

The Palmetto is a true dwarf palm, and will resist the effects of water continuing over its roots for some time; but when the depth of the overflow exceeds eighteen inches, or two feet, I have in all cases observed the disappearance of the palmetto. The soil in which the palmetto predominates is fertile, but of harsher texture than that commonly found covered with cane. Much of the sugar lands of Louisiana have been, in their natural state, covered by an under-growth of latania. It is very remarkable, that though in contact, and growing on grounds in many respects analogous, yet cane and palmetto very seldom admixes to any considerable extent, and in most cases their line of contact is as distinct as if drawn by art.

The poke, *phytolacca decandra*, is also a vegetable which obtains the full development of its growth on the alluvial river border soil of Louisiana, and is very seldom found on either low inundated ground, or in pine woods.

The two trees of Louisiana, found on the greatest variety of soil, is the sweet gum and persimon; I have seen those two species of tree on the lowest and highest parts of the country, admixed with every other kind of timber natural to the respective sections.

The live oak, *quercus virens*, or *quercus sempervirens*, may be considered also as a tree which grows only on border alluvion, and never on annually inundated land. I did not include the live oak in the general list, from the confined extent on which this tree is found.

In the basin Mobile the live oak reaches to North lat. 31, nearly West of Mobile bay it is only found on the sea-coast, and a few miles inland. This range is continued nearly to the Mississippi; here the live oak line is inflected to the south, and is not found on the Mississippi banks above North lat. 30 10. It grows on the margin of Atchafalaya, where any spot of high alluvion suits its habitudes. On Teche it reaches to N lat. 30 23. This is the highest point of latitude attained by that tree west of the Mississippi. On the Mermentau, under the shelter of the Plaquemine woods, it reaches N lat. 30 20. On Lacassine a few trees only are found; beyond the latter bayou westward, on the waters of Sabine and Calcasieu, the live oak does not exist. I could never perceive a single stem of this tree on any branch of either of the two latter rivers, though in a situation to have detected so remarkable an object in the vegetable kingdom. When I made my voyage down the Sabine and along the Mexican gulf, I mistook an opening five

miles west of Calcasieu, for that river, and when I reached its real mouth I mistook it for the Mermentau. At that time I had never been down the latter stream, below its upper lake, and had been informed that the live oak continued long after the disappearance of every other tree; and had also received information that the live oak grew on the small ridges running parallel to the coast; but finding myself in a river without timber of any kind, thirty miles inland, I distrusted the truth of report until I found my mistake by arriving at the settlements on Calcasieu lake. Subsequently I ascertained the correctness of the statement respecting the live oak of Mermentau.

The causes which have operated to limit this valuable tree, and to so much infect its line of termination, are to be sought for in the comparatively severe winters of Louisiana.

The trees which prevail upon the inundated grounds are: swamp overcup white oak, red oak, willow oak, Spanish oak, large chesnut leaved oak, tupeloo, cypress, swamp hickory, bastard paccan, single seeded honey locust, ash two species, willow three species. Three or four non-descript dwarf trees form the ordinary underwood, admixed with vines of various genera and species.

Many other trees are naturally produced on both species of soil; I have enumerated the principal, and those which more particularly serve to designate the texture of the land and vegetable association. Before quitting this part of our subject, I may observe, that the timber trees of the river alluvion are in general the same genera and species found on the bluff lands, noticed in my survey of the state of Mississippi. It is a subject of real philosophical attention to behold the same vegetable families associating together on two places in many respects so different. To this statement the cotton wood may, from its rarity on the bluff land, be considered almost an exception.

No person can examine the timber trees of Louisiana and Mississippi, without astonishment at their enormous trunks. Dr. Bartram, in his Travels in Florida, speaks in rapture of the majestic stems of the laurel magnolia. Where I have seen that tree its column is humble, either in respect to elevation or girth, when compared to that of the quercus tinctoria, liriodendron tulipifera, cupressus disticha, plantanus occidentalis, or populus angulata. Indeed every tree on the alluvion is far above the ordinary developement of its species; not one I have mentioned, but the largest individuals I have seen were on the soil in question. The gigantic mass of the black oak, poplar, sycamores, cypress, and cotton

wood trees of Louisiana are beyond the limits of easy credibility.

To determine the quantity of inundated land, in Louisiana, is attended with much difficulty, from the intricate involutions of the other species of soil. An allowance of one half as much surface for inundated, as we have given to sea marsh and prairie, will not produce a result far removed from correctness. The amount estimated for those soils, was 7,376,000 acres, one-half of which is 3,688,000; the entire surface of sea marsh, prairie, and river inundated land, will consequently amount to the appalling extent of 11,064,000 acres, or within a trifle of 17,300 square miles, or nearly three times the surface of New Jersey.

It ought not to be understood that all this wide extent is equally useless to the purposes of human life. The irreclaimable sea marsh, is indeed worse than useless, it is pernicious; but the prairie as pasture grounds, and the wooded inundated land as a resource for timber, permits a greater area of arable ground to be brought into culture. It is, however, a fact, that immense spaces of the superficies of Louisiana, must remain uncultivated wastes, until the increase of population, and consequent dearthness of land, will superinduce recurrence to operations of melioration, far beyond either the means or necessity of the present age.

We now proceed to examine the largest natural division of the soil of Louisiana, the pine forests. It ought not to be understood that under the general term pine forests, is meant places where that tree prevails to the exclusion of all others; what is intended is places where the greatest mass of the timber is pine.

The pine lands of Louisiana are divided into four grand sections; the first, and most extensive, between Sabine river, Red river, and the prairies of Opelousas; this section embraces more than one-half of the parishes of Opelousas, Rapides, and Natchitoches, and extends to the north-west extremity of the state. The second section, lies between Red and Ouachitta rivers, and sweeps over more than seven-eighths of the whole surface of that part of Louisiana included between these two streams. A third pine tract stretches east of Ouachitta, and near the boundary between Louisiana and Arkansas, reaches within eight or ten miles of the banks of the Mississippi, and extends south to near the junction of the rivers Boeuf and Ouachitta. The four parishes of Louisiana, east of the Mississippi, west of Pearl, and north of Lakes Pontchartrain and Maurepas, and Amite river, contain upwards of 3,000,000 of acres, out of which at least 2,500,000 acres are covered with pine. With every due allowance, therefore, the pine lands of the state, taken together, ex-

ceeds 16,600,000 acres, which added to 11,064,000 acres estimated for sea marsh, wet prairie, and pine woods, gives a grand total of 27,664,000, leaving only 3,804,000 for the surface of the arable river alluvion of the state. This limited surface does not indeed include all the productive farming land; some of the intervals between the alluvial bottoms and pine woods have good second rate soil. About forty-five miles in length from Bayou Iberville, to N lat. 31, and twenty miles wide east from the Mississippi, and a part of the prairie lands of Opeicousas, are very productive: but we will soon perceive that five millions and a half are an ample allowance for all the soil of this state, capable of advantageous cultivation. This statement will no doubt appear incredible, when compared with the common received opinion on that subject, but the following mathematically determined facts put the question at rest. The river lines in the state, measuring both banks where necessary, are upon

This estimate embraces every stream of any consequence in the state, and includes many without any alluvial banks worthy of notice in a geographical point of view; and yet, if the width of half a mile is given to the whole aggregate, the result is 2043 square miles, or 1,307,520 acres. If to this is added as much more for woodland, the result will be 2,615,040 acres, and this again doubled for all other grounds capable of productive cultivation, the whole will only amount to 5,230,080 acres.

Of this surface about one-fifth will admit the production of sugar; the residue remaining for all other objects of agriculture suitable to the climate, such as cotton, indigo, tobacco, and the cereal grains. Of the latter, however, rice and maize, are the only species which will flourish on strong alluvial soil, and the former is restricted by a climate not much more severe than will prevent the advance of sugar

cane. One pre-eminent advantage of rice, arises from the circumstance of its growth on soils too moist for the beneficial cultivation of almost any other vegetable useful to man. Consequently in the south of China, along the large rivers of the hither and nether India, of an extensive surface in both Americas, rice has become an important aliment, and must continue to occupy a great part of the labour of mankind: this grain has added at least one-twentieth to the habitable earth, and permitted the increase of the human species in that ratio. Its beneficent results are no where more ample than on the Delta of the Mississippi.

I have been more particular in the survey of the Delta, than would be requisite with a country less peculiar in its features, or whose relative importance in our confederacy was less apparent.

It must be evident that in all countries, where the only arable land of consequence is river alluvion, settlements must be formed in lines corresponding to the curves of the streams. With the exception of the Mississippi bluff region, noticed in my review of that state, most of the settlements in the pine, sea sand, and sea marsh districts of the United states, conform to this natural arrangement; of course, habitation becomes dense along the river margins, diminishes receding from their banks, and in a great number of instances, leaves wide uninhabited intervals. These effects are, however, more apparent and influential in Louisiana, than in any other part of the southern or south-western states.

The settlements in Attacapas, Opelousas, Avoyells, on Red, Ouachitta, Boeuf, Black, and Mississippi, are uniformly in lines upon the streams, or stretching along the wooded margin of the prairies. That part of Louisiana formed from the Mississippi bluff lands, is the only spot in the state where human habitation assumes the scattered relative position to which they conform in the northern, eastern, and some of the western states. It has been shown that Arkansas and Missouri are in these respects in a great degree similar to Louisiana.

The mere position of settlement would in itself be a matter beneath statistical review, but in the instance before us, the mechanical arrangement of human location is connected with one of the most interesting subjects of inquiry that can occupy philosophical research; that is, the number of human beings which can be enabled to subsist on any given space. It may be assumed *a priori* that a dense, or even moderately compact population can never exist upon any region where the asperities of nature, or moral causes, prevent the production of the greatest part of their

aliment on, or near their place of residence. If the truth of these propositions are acknowledged, the induction follows, that nature has opposed the concentration of as great numbers of people upon given space, of our southern, as upon an equal area of northern territory. Many other natural causes might be adduced, in aid of this assumption, but it would be needless to collect contingent causes, to account for an effect whose production was so demonstratively, and omnipotently established upon the durable, it might almost be said unchanging laws of matter.

It may be enumerated as one of the peculiarities of the soil of the southern, and south-western states, to have but little mean between the best and the worst; the latter exceeding in extent even more than does the former in quality.

The principal staples of Louisiana, are cotton, sugar, and rice. Cotton is general; but sugar and rice confined, particularly the former, to the lower, or southern parts of the state. The quantity of sugar made in Louisiana is rapidly increasing. In 1810 it was about 10,000,000*lbs.* in 1814, 15,000,000*lbs.* and in 1817, upwards of 20,000,000. In Darby's Louisiana the relative sugar, rice, and cotton lands are estimated at 250,000 for sugar, 250,000 for rice, and 2,500,000 for cotton.

Civil and political subdivisions of Louisiana is into parishes. Counties do not exist in the state, but are confined in their uses to a few judicial purposes, and are unknown in the ordinary municipal regulations of the country.

In Louisiana, more than in any other section of the United States, population is extended in lines along the water-courses. From the above table it is seen that the

twelve parishes along the Mississippi river, below the efflux of Atchafalaya, includes upwards of 93,000 inhabitants, leaving only a small fraction more than 60,000 for the residue of the state. The line of settlement along Mississippi, below Atchafalaya, is about 200 miles in length, and at the utmost, even embracing wood land, not averaging, below Bayou Iberville more than three miles in width. Above Iberville, on the east side of the river, settlements widen. The two parishes of N w Feliciana, and East Baton Rouge, between lat. 31, and Bayou Iberville, extend over 1500 square miles. If we allow for land actually employed in the purposes of agriculture, including tillage and woodland, 600 square miles below Iberville, and 1000 along and contiguous to the Mississippi, above Iberville and below Atchafalaya, the aggregate will rather exceed than fall below reality. And if we then assume double that extent for all the actually employed agricultural land of the state, we have 3,200 square miles, inhabited by 153,407 persons, equal to 48 to the square mile; and leaving an uncultivated extent of 45,120 square miles.

By the census of 1820, the population of Louisiana were found composed of 73,867 whites, 60,064 slaves, and 10,475 free coloured persons.

Louisiana was admitted into the Union as an independent state at the session of Congress 1811-12, and changed its name from that of Territory of Orleans, to what it now bears. The majority of the white inhabitants are the descendants of the early French colonists, the next most numerous class is Anglo-Americans; and the residue made up of various nations. Contrary to common belief, there are very few Spaniards in that state. During 34 years that it was held by Spain, it was occupied by the officers of that nation, but never became an object of colonization with the Spanish people.

The variety in the shades of human society, are perhaps, in no civilized country more marked: between New Orleans and Sabine river every variety can be seen from the hunter state, to that of the highest refinement of the mercantile, and aristocratical. In New Orleans and its vicinity, the merchant and planters vie with the most luxurious countries in Europe, in their agriculture, and manner of living. As the traveller advances westward, this

glare gradually vanishes, and in Attacapas, Opelousas, Rapides, Ouachitta, and Natchitoches, the features of society bespeak substantial independence. Still farther westward, and much intermingled with the latter settlements, the true pastoral state is seen in its simplest forms. Many of those shepherds are truly wealthy. Beef cattle forms in fact one of the principal interior staples of the SW part of Louisiana.

Louisville, post town, and seat of justice Jefferson county Kentucky, stands on the left bank of Ohio river below the mouth of Bear grass creek, and at the head of the Rapids. In 1810 it contained only 1357 inhabitants; its population now no doubt exceeds 5000, and is rapidly increasing. It contains a jail, courthouse, and other necessary buildings for judicial purposes, with a theatre, three banks, one a branch of that of the United States; a market-house; several places of public worship, and three printing offices.

Many flourishing manufacturing establishments have been formed at this place; amongst which that erected by the Hope distillery Company is one of the most extensive of its kind in the United States, producing 1200 gallons daily. Besides this very enlarged distillery, three or four large tobacco manufactories are in operation. Upwards of 60 workmen are daily employed in the construction of steam-boats. A very productive soap and candle factory, yielding weekly 12,000 lbs. of soap, 6,000 lbs. of candles, is in operation. To the foregoing may be added, a sugar refinery, steam flour mill, and two steam saw mills. From Louisville and Shippingport now proceed about thirty steam-boats, the tonnage of which exceeds 7,200 tons.

Canals have been long projected along both banks of Ohio, to pass the Rapids, though no extensive steps have yet been adopted to carry into effect either plan. The distance necessary to cut does not exceed on either bank, more than four miles, and the utility of the work when done incalculable.

Louisville stands at N lat. 38 18, and 5 42 W lon. from W C.

Louisville, post town and township, St. Lawrence county New York, on the right bank of St. Lawrence river, 30 miles below Ogdensburg. Population 1820, 831.

Louisville, post town, and seat of justice, Jefferson county Georgia, on the Ogechee, 50 miles SW from Augusta, and about 50 miles SE by E. from Milledgeville.

Louistown, post village of Talbot county Maryland, 10 miles NE from Easton.

Louit-tcheou-fou, city of China in the province of Quang tong, separated by a narrow strait from the Isle of Hai-nan, where pearls are said to have been formerly fished up. It is 343 miles SW of Canton.

Louitz, town of Great Poland, in the palatinate of Rava. 55 miles E of Gnesna. Lon. 19 0 E, lat. 52 26 N.

Lou-ngan-fou, city of China, in the province of Chan si, agreeably situated near the source of the river Tso-tsang-ho. It is 375 miles SW of Peking.

Loung Loch, great arm of the sea, in Argyleshire, which communicates on the S, with the Frith of Clyde.

Loudre, town of France, in the department of the Upper Pyrenees and late province of Bigorre, 15 miles S of Tarbes. Lon. 0 5 W, lat. 43 8 N.

Louth, county of Ireland, in the province of Leinster, 29 miles long and 13 broad; bounded on the N by Armagh and Carlinford Bay, on the E by the Irish Sea, on the W by Monaghan and E by Meath, from which it is parted, by the Boyne. It is a small but fruitful county, and proper to feed cattle, contains 50 parishes, and sends ten members to parliament. Drogheda is the capital.

Louth, town of Ireland, in a county of the same name, 19 miles N by W of Drogheda.

Louth, corporate town of Lincolnshire, with a market on Wednesday and Saturday. It is a large well built town, the market well frequented, here is a free-school founded by Edward VI. It has a new navigation, by means of its brook, the Lud, to the German Ocean, at Tetney Creek. It is 28 miles NE of Lincoln, and 148 N of London. Lon. 0 10 E, lat. 53 25 N.

Louth Township, in the county of Lincoln, Upper Canada, lies in the west of Grantham, and fronts lake Ontario.

Lautre, pass a la, one of the outlets, that to the extreme N of the Mississippi.

Loutre, town of Montgomery county Missouri.

Louvain, large and pleasant city of Austrian Brabant, with a celebrated university. Its walls are nearly seven miles in circumference, but within them are many gardens and vineyards. The public buildings are magnificent, and the university consists of a great number of colleges, they formerly made here large quantities of cloth, but this trade is greatly decayed, and it is now chiefly remark-

able for good beer, with which it serves the neighbouring towns. It is seated on the Dyle, 14 miles E by N from Brussels, and 40 NE of Mons. Lon. 4 31 E, lat. 50 53 N.

Louvenstein, fortress of the United Provinces in Holland, seated at the confluence of the rivers Waal and Maese, on the W end of an island called Bommel Waert. It is 16 miles E of Dort. Lon. 5 13 E, lat. 50 40 N.

Louviers, handsome town of France, in the department of Eure and late province of Normandy, with a manufacture of cloth, seated on the Eure, 10 miles N of Evreux, and 55 NW of Paris. Lon. 1 13 E, lat. 49 0 N.

Lauvo, town of the kingdom of Siam, with a royal palace. It is very populous, 50 miles N of the city of Siam. Lon. 100 50 E, lat. 15 8 N.

Lovington, post village, Nelson county, Virginia.

Lowdore, fine cataract in Cumberland, on the E side of the lake of Derwent water, in the vale of Keswick.

Lowhill, township of Lehigh county of Pennsylvania, on Jordan creek, 12 miles NW from Allentown. Population 1824, 703.

Lower Marlborough, post town in Calvert county, Maryland; on the E side of Patuxent river, 30 miles SSW of Annapolis, and 24 NW of St. Leonards.

Lower Saucon, extreme southern township of Northampton county on Saucon creek, 4 miles S from Bethlehem. Population 1820, 2208.

Lowicz, populous town of Poland, in the palatinate of Rava, with a strong fortress, seated on the Bzura, 21 miles S of Plocksko, and 30 N of Rava. Lon. 19 29 E, lat. 52 24 N.

Low-Layton, village in Essex, which, with that of Laytonstone, forms one parish. Here a great many Roman antiquities have been dug up. It is six miles NE of London.

Lowville, fine post village of Lewis county New York, on a small creek, near the west side of Black river, 57 miles N from Utica.

Loxa, considerable town of Spain, in the kingdom of Granada, seated in a fertile country, on the river Xenil, 18 miles W of Granada. Lon. 3 52 W, lat. 37 15 N.

Loxa, town of Peru, in the province of Quito, 200 miles ENE of Paita. Lon. W C 0 10 W, lat. 4 50 S.

Loyalsock, river of Lycoming county Pennsylvania, rises on the southern borders of Bradford, and western of Luzerne county, heading with the Towan-

da, and Mahopeny rivers, and flowing SW between Muncy, and Lycoming creeks, falls into the West Branch of Susquehanna, 4 miles below Williamsport.

Loyalsock, township of Lycoming county Pennsylvania, extending from the west branch of Susquehanna, between Lycoming creek and Loyalsock river, and including Williamsport. Population 1820, of the township including the borough 2049; of which 624, was found in Williamsport.

Loyds, post town, in Essex county, Virginia, 94 miles from Washington.

Loytz, town of Pomerania, in the county of Gutzkow, seated on the Pene, ten miles above the city of Gutzkow.

Lozere, department of France, including the late province of Gevaudan. It is a mountainous, barren country, and receives its name from one of its principal mountains. Mende is the capital.

Luban, town of the Russian government of Livonia, 70 miles E of Riga. Lon. 26 36 E, lat. 56 55 N.

Lubensken Sea, or the *Lake of Luban*, lake of Livonia, toward the confines of Courland and Lithuania. The river Rositta falls into this lake.

Lubben, town of Germany, in Lower Lusatia, capital of a district of the same name, with a handsome castle. It belongs to the duke of Mersenburg, and is seated on the Spree, 60 miles SE of Berlin. Lon. 14 25 E, lat. 52 0 N.

Lubec, city and seaport of Lower Saxony, in the duchy of Holstein, and lately the see of a bishop, who was a prince of the empire. It was the head of the famous Hanseatic league, formed here in 1164, and the most commercial city of the north; but it now has lost great part of its trade. The houses are built in a very ancient style; the doors being so large as to admit carriages into the hall, which frequently serves for a coach-house. The townhouse is a superb structure, and has several towers. There is also a fine council-house and an exchange. The inhabitants are Lutherans. Lubec is seated at the confluence of some rivers, the largest of which is the Trave, 14 miles SW of the Baltic, and 35 NE of Hamburg. Lon. 10 49 E, lat. 53 52 N.

Lubec, island in the Indian ocean, near the island of Madura. Lon. 112 22 E, lat. 5 50 S.

Lubeck, post town and township, Washington county Maine, between the Atlantic Ocean, and Cobscook bay, contiguous to Eastport. The village was commenced in 1815, and with an excellent harbour, a custom-house, and numerous other commercial advantages is

rapidly increasing. Population 1830, 1450.

Luben, town of Germany, in the province of Silesia, capital of a circle of the same name, in the principality of Lignitz, 22 miles NW of Breslaw. Lon. 16 28 E, lat. 51 20 N.

Lubin, city of Poland, capital of a palatinate of the same name, with a citadel, a bishop's see, an academy, and a Jewish synagogue. It is seated on the Weipra, 75 miles SE of Warsaw. Lon. 22 45 E, lat. 51 14 N.

Lubow, town of Poland, in the palatinate of Cracow, 50 miles SE of Cracow. Lon. 20 36 E, lat. 49 36 N.

Luc, town of France, in the department of Var and late province of Provence, 25 miles NE of Toulon. Lon. 6 25 E, lat. 43 28 N.

Luc, town of France, in the department of Isere and late province of Dauphiny, seated on the river Drome, 32 miles S of Grenoble. Lon. 5 48 E, lat. 44 40 N.

Lucanas, town and district of Gurancavelica, in Peru, remarkable for its silver mines. Lon. WC 3 E, lat. 15 S.

Lucar-de-Barameda, St. Seaport of Spain, in Andalusia, with a bishop's see. It has a very large fine harbour, well defended; and is seated at the mouth of the Guadalquivir, 44 miles S by W of Seville, and 270 of Madrid. Lon. 5 54 W, lat. 36 58 N.

Lucar-de-Guadiana, St. strong town of Spain, in Andalusia, with a small harbour on the river Guadiana, 39 miles NE of Faro. Lon. 8 16 W, lat. 37 18 N.

Lucar La Mayor, St. town of Spain in Andalusia, seated on the Guadiana, 10 miles NW of Seville. Lon. 5 33 W, lat. 37 36 N.

Lucayas. See *Bahamas*.

Lucca, town of Italy, capital of a duchy of the same name. It is about three miles in circumference, and surrounded with a wall and other modern fortifications. It is an archbishop's see, and the churches are very handsome. They have also an academy, a university, and an academy of arts and sciences. The inhabitants have a considerable manufactory of silk, and gold and silver stuffs. It is seated in the middle of a fruitful plain, surrounded with pleasant hills, near the river Serchio, over which there are two bridges. It is 10 miles NE of Pisa, 37 W of Florence, and 155 N by W of Rome. Lon. 10 35 E, lat. 45 50 N.

Lucca, formerly a republic of Italy, lying on the Tuscan Sea; about 20 miles in length, and 10 in breadth. The soil does not produce much corn; but there is plenty of wine, oil, silk, wool, and chestnuts; their oil in particular is in high esteem, and the common people usually eat chestnuts instead of bread. The usual revenues amount to about 30,000*l.* per annum.

Luce, great bay in Wigtonshire, lying to the E of mull of Galloway.

Lucera, ancient town of Italy, in the kingdom of Naples, in Capitanata, with a bishop's see, 30 miles SW of Manfredonia, and 65 NE of Naples. Lon. 15 54 E, lat. 41 28 N.

Lucern, one of the cantons of Switzerland, and the most considerable, except Zurich and Berne. It is 30 miles in length, and 20 in breadth: bounded on the E by the cantons of Underwalden, Schweitz, and Zug, and on all the other sides, by the canton of Bern. The inhabitants of this canton are reckoned about 100,000, and are Roman catholics. The government was formerly aristocratical, consisting of a senate of 36, and a council of 64, in which some plebeian burghers were admitted every election; but the Helvetic confederacy, as well as the constitution of the several cantons is now dissolved, the French having cruelly and unjustly enslaved this brave and virtuous people.

Lucern, capital of the canton of Lucern, in Switzerland. It is divided into two by a branch of the Reuss, which falls into the lake, on the NW end of which the town is seated, and commands an extensive prospect. It scarcely contains 3,000 inhabitants, has no manufactures of consequence, and little commerce. The pope has always a nuncio resident here. In the cathedral is an organ of a fine tone, and an extraordinary size; the centre pipe is 40 feet in length, near three in breadth, and weighs 1,100 pounds. The bridges which skirt the town, round the edge of the lake, are the fashionable walk of the place, and remarkable for their length. They are decorated with coarse paintings, representing the histories of the Old Testament, the battles of the Swiss, and the dance of death. Lucern is 30 miles SW of Zric, and 35 E of Berne. Lon. 8 6 E, lat. 47 5 N.

Lucon, or *Luzon* town of France, in the department of Vendee and late province of Poitou, and lately an episcopal see, seated in an unwholesome morass, 17 miles N of Rochelle, and 50 S of Nantes. Lon. 1 5 W, lat. 46 27 N.

Luconia, or *Manilla*, the chief of the Philippine Islands, in the N Pacific Ocean, 400 miles in length and 100 in breadth. It is not so hot as may be expected, because it is well watered by large lakes and rivers, and the periodical rains which inundate all the plains. There are several volcanoes in the mountains, which occasion earthquakes; and a variety of hot baths. The produce of this island is wax, cotton, wild cinnamon, sulphur, cocoanuts, rice, gold, horses, buffaloes, and game. Philip II. of Spain, formed a scheme of planting a colony in the Philippine islands, which had been neglected since the discovery of them by Magellan, in 1521. Manilla, in this island, was the station chosen for the capital of the new establishments. Hence an active commercial intercourse began with the Chinese, a considerable number of whom settled in the Philippine Islands, under the Spanish protection. These supplied the colony so amply with all the valuable productions and manufactures of Asia, as enabled it to open a trade with America, by a direct course of navigation, the longest from land to land on our globe. This trade, at first, was carried on with Calao, on the coast of Peru; but it was afterwards removed to Acapulco on the coast of New Spain. From this port annually sail one or two ships, which are permitted to carry out silver to the amount of 500,000 crowns, in return for which they bring back from

Manilla, spices, drugs, China and Japan wares, calicoes, chintz, muslins, silks, &c. The inhabitants are a mixture of several nations, besides Spaniards; and they all produce a mixed breed, distinct from any of the rest. The blacks have long hair and good features; and there is one tribe who prick their skins, and draw figures on them, as they do in most other countries where they go naked. See *Manilla*.

Luneville, town of France, in the department of Meurte. Its castle, where the

dukes of Lorain formerly kept their court, as did after-ward king Stanislaus, is now converted into barracks. The church of the late regular canons is very handsome; and here Stanislaus founded a military school, a large library, and a fine hospital. In 1801, a treaty of peace was concluded here between France and Germany. Lunéville is seated in a plain between the rivers Vezouze and Meurte, 14 miles ESE of Nancy, and 62 W of Strasburg. Lon. 6 30 E, lat. 48 36 N.

Lungro, town of Naples in Calabria Citeriore, chiefly inhabited by Greeks, 35 miles NNW of Cosenza.

Lupowo, town of Further Pomerania, on a river of the same name, 15 miles E of Stolpe.

Lure, town of France, in the department of Upper Saone, celebrated for a late abbey of Benedictines, converted, in 1764, into a chapter of noble canons. It is seated near the Dagnon, 30 miles NE of Besancon.

Lurgan, town of Ireland, in the county of Armagh, with an extensive linen manufacture, 14 miles NE of Armagh, and 67 N of Dublin.

Lusatia, a marquise of Germany, 90 miles long and 60 broad; bounded on the N by Brandenburg, E by Silesia, S by Bohemia, and W by Misnia and Saxony. It is divided into Upper and Lower. Upper Lusatia abounds more in mountains and hills than the Lower, in which are many boggy and moorish tracts, yet it is the most fruitful. The breeding of cattle is very considerable, and there is plenty of game; but the products of the country do not supply the necessities of the inhabitants. This want is compensated by its numerous manufactures, particularly those of cloths and linens. Bautzen and Luckau are the capitals.

Lusignan, town of France, in the department of Vienne, seated on the Vonne, 15 miles SSW of Poitiers.

Lutterworth, town in Leicestershire, with a market on Thursday. It has a large church, with a beautiful steeple, of which Wickliff, the first reformer, was rector, and he died here in 1385. Lutterworth has an extensive cotton manufacture, and many hands are employed in the stocking trade. It is seated on the river Swift, 14 miles S of Leicester, and 88 NW of London.

Lutzelstein, town of France, in the department of Lower Rhine, with a strong castle, seated on a mountain, 30 miles NW of Strasburg.

Lutzen, town of Upper Saxony, in Thuringia, with a castle. Near this place, in 1632, Gustavus Adolphus, king of Sweden, was killed in a battle, at the moment of victory. Lutzen is also celebrated for a great battle having been fought here on the 2d of May, 1813, between the French army, commanded by Napoleon, and the Russian and Prussian army, under General Wittgenstein, which terminated in the defeat of the latter. It is seated on the Elster, seven miles WSW of Liepsic.

Luxemburg, province of the Netherlands: bounded on the E by Treves, S by Lorrain, W by Champagne and Liege, and N by Liege and Limburg. It lies in the forest of Ardennes, and in some places is covered with mountains and woods; but, in general, is fertile in corn and wine, and has a great number of iron mines. The principal rivers are the Moselle, Sour, Ourte, and Semoy.

Luxemburg, strong city of the Netherlands, capital of the province of its name. In 1713, it was given to the Dutch, as a barrier town; ceded to the house of Austria, in 1715; and surrendered to the French, in 1795. It is divided, by the Alsit, into the upper and lower towns; the former almost surrounded by rocks, but the lower seated in a plain. It is 22 miles WSW of Treves. Lon. 6 12 E lat. 49 37 N.

Luzerne, county of Pennsylvania; bound SE by Pike and Northampton; S by Schuylkill; SW by Columbia; W by Lycoming; NW by Bradford; N by Susquehannah; and E by Wayne. Length 45; breadth 40; and area 1784 sq. miles.

Luzerne county is in many respects a very interesting region, and merits a very particular notice in an elementary work.

Its soil and surface is perhaps more varied than any county of Pennsylvania. The soil of the valleys are in some parts composed of the richest alluvion, but varies from that species to barren rock. The mountains are rugged, and barren, and in general seem incapable of culture. The Susquehannah river enters the county at its NW angle, and flows to the SE, by comparative courses, 35 miles to the mouth of Lackawannock river; here it turns nearly at right angles, and flows SW 35 miles by comparative courses, to a little below Nescopeck, where it enters Columbia.

The following specific description was compiled from the manuscript notes of Isaac A. Chapman, Esq.

The country is very mountainous, and the mountains consist principally of ridges running parallel to each other; and like the other mountains of Pennsylvania, extending nearly parallel to the sea-coast, in nearly a SW, and NE direction. In the intervals between the mountain ridges are the fertile valleys, on which are placed the body of the population of the county. The principal mountains of Luzerne are the following; Wyoming mountains on each side of Susquehannah river; and forming the valley of Wyoming. The local names of these two ridges are Bullock mountain SE; and Shawaney mountain NW. The over-height of Bullock mountain 1000, and that of Shawaney 850 feet above the Susquehannah river. From the summit of one mountain to that of the other opposite Wilkesbarre, by the road $6\frac{1}{2}$, but by an air line $5\frac{1}{2}$ miles. At the foot of each mountain are the small hills, consequently, the broken ground occupies more space than the real bases of the mountain. At Wilkesbarre, the level plain on the W side extends about $1\frac{1}{4}$ mile from the river, but on the E side only about half a mile. Upon the latter, the town of Wilkesbarre is situated. The Nescopeck mountain, on the N side of the Nescopeck creek, is a range nearly of similar height, with those of Wyoming, and parallel to them. The Nescopeck forms a regular unbroken

ridge, nearly destitute of timber on its summit; and reaches from the Susquehannah, nearly to the Lehigh. Hell Kitchen mountain, commences at the head of Nescopeck valley, and extends NE towards the Lehigh. It is a high rocky and barren ridge, naked of timber on its summit, where only small shrubbery find support. From the NW slope of this mountain flows Hell Kitchen creek, a small branch of Nescopeck.

Sugar loaf mountain is an isolated pyramidal peak rising from Nescopeck valley. Mahopeny mountain is a mere spur of Bowman's mountain. See Bowman's mountains, and Lackawannock mountain.

The Wyoming, Lackawannock, and Buck mountains all produce mineral coal of the Anthracite species. It forms an important article of commerce from Luzerne county.

The valleys of Luzerne, are the following. Valley of Wyoming, about 20 miles long and 5 wide, lying on both sides of the Susquehannah river, which enters it at its NE extremity through the precipitous gap in the Shawanese range. The river traverses the valley in a serpentine course, and leaves it by a gap called Nantikoke falls. In this valley stand the towns of Wilkesbarre and Kingston opposite to each other. This is the most populous valley in the country, the soil is exuberantly fertile.

Nescopeck valley lies on both sides of Nescopeck creek, and between Nescopeck, and Buck mountains. It is about 20 miles long and 5 miles wide, and does not extend to the river. In point of soil it stands next to Lackawannock valley, but the soil of Nescopeck is somewhat superior. See *Lackawannock Valley*.

Tunkhannock valley is very irregular and crooked about a mile wide; lessening in some places to half a mile, and about 35 miles long, and reaches from the Susquehannah river into Susquehannah county. In proportion to its width, it is well cultivated and populous.

Mahopeny valley, lies along Mahopeny creek; is narrow, irregular and thinly peopled. Its length about 20 miles from the river. Its opening to the river is in Braintrim township in the NW part of the county.

All the streams of Luzerne, are rapid and supply in an indefinite number of places excellent sites for water works.

About one fiftieth part of the whole county is already cleared and cultivated; and not more than one third will admit of agriculture. For pastoral purposes the proportion to the whole will be larger.

The mountain timber of Luzerne, is various species of oak, thinly admixed with yellow pitch, and white pine, of a small growth. On the hills, timber becomes larger, and more numerous in species; the oak and pine being mixed with hickory, wild cherry, beech, birch, and hemlock. In the northern parts of the country, 4 or 5 miles from the Susquehannah sugar maple is very abundant, and mixed with an immense quantity of beech, and hemlock, the latter peculiarly abounding on the lowlands. In the southern part of the country, the low grounds or valleys, generally produce yellow pine, white pine, oak, and hickory, and occasionally buttonwood. Black walnut is common to the dry rich soil of the whole county.

The only minerals yet found in any considerable quantity in Luzerne, are iron and coal. Two forges for the manufacture of iron have been erected, one in Lackawannock, the other in Nanticoke valley. Staples of Luzerne, grain flour, whiskey, lumber, and coal. Chief town, Wilkesbarre, Kingston, and Stoddartsville.

Lyonsis, late province of France, which, with that of Forez, forms the department of Rhone and Loire.

Lyons, second city of France for beauty, commerce, and opulence. It is the capital of the department of Rhone and Loire, and is seated at the confluence of the Rhone and Saone. It was founded about the year 42 B. C. by the Romans, who made it the centre of the commerce of the Gauls. About the year 145, it was totally destroyed by fire, but was re-built by the munifi-

cence of Nero. Many antiquities are still observed, that evince its Roman origin. Lyons is the see of an archbishop, and before its recent calamities contained 150,000 inhabitants, upwards of 30,000 of whom were employed in various manufactures, particularly of rich stuffs, of the most exquisite workmanship, in silk, gold, silver, &c. The quays were adorned with magnificent structures. The Hotel-de-ville vied with that of Amsterdam; and the theatre was not surpassed by any in France. The other principal public buildings were the Hotel de Dieu, the Hospital of Charity, the Exchange, the Custom-House, the Palace of Justice, the Arsenal, a public library, and two colleges. The bridge, which unites the city with the suburb de la Guillotiere, is 1560 feet long; and there are three other principal suburbs, six gates, and several fine churches. No city of France suffered so much from the revolution as Lyons; its population was reduced to less than 80,000. It is again rapidly increasing, and contains it is probable 130,000 inhabitants. This city is 15 miles N of Vienne, and 220 SE of Paris. Lon. 4 55 E, lat. 45 46 N.

Madagascar, large island of Africa, discovered by the Portuguese, in 1492. It lies 40 leagues E of the continent of Africa, from which it is separated by the strait of Mosambique. It extends 900 miles from N to S, and is from 200 to 300 broad. The natives are commonly tall, well made, and of olive complexion, and some of them pretty black. They are civil and good natured people but easily provoked, and apt to show their resentment on the least provocation. Their hair is not woolly, like that of the negroes of Guinea; but it is always black, and for the most part curls naturally: their nose is small though not flat, and they have not thick lips. The abundance and variety of provisions of every kind, which a fine climate and fertile soil can produce are on no part of the globe superior to those of Madagascar. The French have attempted to settle here, but have always been repelled. There are only some parts on the coast yet known. Lat. from 12 to 26 S.

Maderia, island in the Atlantic Ocean, 120 miles in circumference, and 240 N by E of Teneriffe. In 1419, when the Portuguese, under the patronage of prince Henry, had made their second voyage to their recently discovered island of Porto Santo, they observed towards the S, a fixed spot in the horizon, like a small black cloud. By degrees, they were led to conjecture that it might be land, and steering toward it, they arrived at a considerable island, uninhabited, and covered with wood, which on that account, they called Maderia. Prince Henry, the next year, settled a colony here, and not only furnished it with the seeds and plants, and domestic animals common in Europe, but he procured slips of the vine from Cyprus, the rich wines of which were then in great request, and plants of the sugar cane from Sicily, into which it had been lately introduced. These thrived so prosperously that the sugar and wine of Maderia quickly be-

came articles of some consequence in the commerce of Portugal; but its wine, in particular is in the highest estimation, especially such as had been a voyage to the East or West Indies, for it matures best in the hottest climate. The scorching heat of summer, and the icy chill of winter, are here equally unknown; spring and autumn reign continually, and produce flowers, and fruits throughout the year. Many brooks and small rivulets descend from the mountains in deep chasms or glens, which separate the various parts of the island. The beds of the brooks are in some places covered with stones of all sizes, carried down from the higher parts by the violence of winter rains or floods of melted snow. The water is conducted by weers and channels in the vineyards, where each proprietor has the use of it for a certain time; some being allowed to keep a constant supply of it, some to use it thrice, others twice, and others only once a week. As the heat of the climate renders the supply of water to the vineyards absolutely necessary, it is not without great expense that a new vineyard can be planted: for the maintenance of which, the owners must purchase water at a high price, from those who are constantly supplied, and are thus enabled to spare some of it. The cedar tree is found in great abundance, and extremely beautiful; most of the ceilings and furniture at Maderia are made of that wood, which yields a very fragrant smell. The dragon tree is a native of this island. Flowers nursed in the English greenhouses grow wild here in the fields; the hedges are mostly formed of the myrtle, rose, jassamine, and honeysuckle; while the larkspur, fleur-de-lis, lupin, &c. spring up spontaneously in the meadows. There are very few reptiles to be seen in the island; the lizard is the most common. Canary birds and goldfinches are found in the mountains; of the former numbers are sent every year to England. This island is well watered and populous. Funchal is the capital.

Madera, river of South America. one of the great southern confluent of the Amazon, rises as far south as lat. 20 S. interlocking sources with the Pilcomays, and Ucayale, flowing thence nearly due N to S lat. 10; it thence turns to NE and enters the Amazon at lat. 3 S. The Madera is one of the largest secondary rivers of the globe.

Madia or *Maggia*, town, river, valley, and bailiwick of Switzerland, in Upper Vallais. The valley is long and narrow, between high mountains, watered

Madison's river, branch of Missouri, rises in the Chippewan mountains, between the Yellow Stone, and Jefferson's river, and flowing NE joins Jefferson's and Gallatin's rivers, and forms the Missouri.

Madisonville, post town and seaport of Louisiana, on Chisunete river, parish of St. Tammany, about 28 miles NNW from New Orleans.

Madras, or *Fort St. George*, fort and town of the peninsula of Hindoostan, on the coast of Coromandel. It is the principal settlement of the English East India Company on the E side of the peninsula, and is a fortress of very great extent, including within it a regular well built city. It is close on the margin of the Bay of Bengal, from which it has a rich and beautiful appearance; the houses being covered with a stucco called chunam, which in itself is nearly as compact as the finest marble, and, as it bears as high a polish, is equally splendid. They consist of long colonnades, with open porticos, and flat roofs; and the city contains many handsome and

spacious streets. But the inner apartments of the houses are not much decorated, presenting to the eye only white walls; which, however, from the marble-like appearance of the stucco, give a freshness, grateful in so hot a country. Ceilings are very uncommon in the rooms. Indeed it is impossible to find any which will resist the ravages of that destructive insect, the white ant. There is a second city, called the Black Town, nearly 4 miles in circuit, separated from Madras by the breadth of a proper esplanade only. Madras, in common with all the European settlements on this coast, has no port for shipping; the coast forming nearly a straight line; and it is incommoded also with a high and dangerous surf. Madras was taken by the French in 1746, but restored by the peace of Aix-la-Chapelle. It is 100 miles N by E of Pondicherry, 1030 SW by W of Calcutta, and 758 SE of Bombay. Lon. 80 25 E, lat. 13 5 N.

Madre de Dios, island in the Pacific Ocean, near the coast of Patagonia, 180 miles in circumference. Lon. 42 0 W, lat. 51 0 S. It is the Resolution of English sailors and geographers.

Madre de Popa, town of New Granada, on the Madelena, 50 miles E of Carthagena.

Madrid, capital of Spain, in New Castile. The houses are all built with brick, and the streets are long, broad, and straight, and adorned at proper distances with handsome fountains. There are above 100 towers or steeples, in different places, which contribute greatly to the embellishment of the city. It is seated in a large plain, surrounded by high mountains. Madrid is seated on the river Manzanares, which though small, is adorned with two magnificent bridges. It 265 miles NE of Lisbon, 790 S by W of London and 625 SSW of Paris. Lon. 3 20 W, lat. 40 25 N. It is the most elevated capital in Europe, standing on ground about 2200 feet above the level of the Atlantic Ocean; consequently the air in winter is keen and piercing. The atmosphere is, however, generally pure and serene. Population about 200 000. The learned institutions of Madrid are numerous and highly respectable. It is 650 miles SSW from Paris. 850 W by S from Rome, but upwards of 1000 by land, and about 800 miles SSW from London.

Madrid, township, and post village St Lawrence county New York, on St Lawrence river, at Point Iroquois, 3 miles above Hamilton, and 12 below Ogdensburg. Population 1820, 1900.

Madrigal, town of Spain, in Old Cas-

tile, seated in a plain, fertile in excellent wine, 10 miles from Medina-del Campo. Lon. 4 19 W, lat. 41 25 N.

Madrigal, town of South America, in the province of Popayan. Lon. 75 45 W, lat. 0 50 N.

Madrisio, small town of Italy, in the state of Venice, 32 miles from Venice.

Mad river, name of a township in Clark county Ohio. Population 1820, 734.

Mad river, large eastern branch of the Great Miami, rising in the northern parts of Logan county Ohio; across which, and Clark, and the northwesterly corner of Green county, it runs in a southwestwardly direction above 50 miles, into the eastern part of Montgomery county, and falls into the Miami above the town of Dayton.

Madrogam, large town of Africa, capital of Monomotapa, with a spacious royal palace. The upper part of the houses is in the shape of a bell. Lon. 31 40 E, lat. 18 0 S.

Madura, town of the Carnatic, capital of a province of the same name, on the coast of Coromandel, 130 miles N by E of Cape Comorin, and 303 SW of Madras. Lon. 78 12 E, lat. 9 55 N.

Macler, lake of Sweden 80 miles long and 20 broad, between the provinces of Westmania and Sudermania.

Maelstrom, very extraordinary and dangerous whirlpool, on the coast of Norway, in 68 N lat. in the province of Nordland and district of Lofoden, near the island of Moskoe, whence it is also named

Moskoestrom. The mountains of Helseggen, in Lofoden, lies a league from the island of Moskoe, and between these two, runs this large and dreadful stream, the depth of which is from 36 to 40 fathoms. When it is flood, the stream runs up the country between Lofoden and Moskoe with a boisterous rapidity; but the roar of its impetuous ebb to the sea is scarcely equalled by the loudest cataract. The whirlpool is of such an extent and depth, that if a ship comes within its attraction, it is inevitably absorbed and beat to pieces against the rocks below; and when the water relaxes, the fragments come up again. The intervals of tranquillity are only at the turn of the ebb and flood, and calm weather; they last but a quarter of an hour, its violence gradually returning. When the stream is most boisterous, and its fury heightened by a storm, vessels have been reached by it at the distance of five miles.

Maerna, town of Germany, in Tyrol, 23 miles WSW of Trent.

Maceyk, town of the Netherlands, in the territory of Liege, on the river Meuse, 10 miles SSW of Ruremonde.

Maeslandstuijs, town of South Holland, near the mouth of the Meuse, 10 miles W of Rotterdam.

Maestricht, city of the Netherlands, about 4 miles in circumference, seated on the Meuse, opposite Wyck, with which it communicates by a stone bridge. The number of inhabitants is estimated at 18,000. It has a college formerly belonging to the Jesuits, a council house with its library, and manufactures of cloth, and fire-arms. The fortification and situation of Maestricht are such, that it is deemed one of the strongest places in Europe. It is 14 miles NNE of Liege, 58 E of Brussels. Lon. 5 48 E, lat. 50 49 N.

Mafra, town of Portugal, in Estremadura, with a college founded in 1772. The town is seated near the sea, 18 miles NNW of Lisbon.

Magadi, or *Maghery*, town of Hindoostan, in Mysore, seated in a hilly country abounding in timber-trees, stone, and iron, 24 miles W of Bangalore.

Magadoxo, capital of a kingdom of the same name, on the coast of Ajan, with a citadel, and good harbour. It stands at the mouth of a river of its name, which is supposed to have a long course, having regular inundations that fertilize the country to a great extent. The king and his court are Mohammedans; his subjects, of what extract soever (for some of them are white, others tawny and olive, and others quite black) all speak the Arabic tongue; they are stout and warlike, and among other weapons use poisoned arrows and lances. The city is a place of great commerce, receiving from Adel and other parts, cotton, silk, spices, and drugs, in exchange for gold, ivory, wax, and other commodities. Lon. 46 25 E, lat. 2 10 N.

Magdeburg, duchy of Germany, in Lower Saxony, bounded on the N and E by Brandenburg, S by Anhalt, and Haberstadt, and W by Brunswick. It is divided into four circles, Holz, Saal, Jerich, and Ziesar. The country is in general level, and the parts which are not marshy and overgrown with wood are very fertile. The salt springs are of such richness, that they are able to supply all Germany with salt. This duchy belongs to the king of Prussia.

Magdeburg, fortified city, capital of the duchy of the same name. It has a handsome palace, a citadel with a fine arsenal, and a magnificent cathedral,

which contains the superb mausoleum of Ocho the Great. This city is happily situated for trade having an easy communication with Hamburg by the Elbe, therefore they carry on manufactures of cotton, linen, &c. to a great extent, but their principal merchandise is silk and woollen. It is the strongest place belonging to the Prussian majesty, where his principal magazines and founderies are established. It is 40 miles W of Brandenburg, and 125 SE of Hamburg. Lon. 11 45 E, lat. 52 11 N.

Magellan, strait of South America, between the continent, and island of Terra del Fuogo; discovered in 1520, by Magellan, a Portuguese in the service of Spain, since which time it has been sailed through by several navigators; but the passage being dangerous and troublesome, they now sail to the Pacific Ocean round Cape Horn. The Spaniards call the country to the N of this strait Tierra Magallanica.

Mageville, township of Sunbury county New Brunswick, on the right side of St. John's river.

Maginda, island of the Pacific Ocean, in Austral Asia; it is the most southern of the Phillippines, and is about 300 miles in length, but irregular and narrow.

Mahantango, Lower, township in the NW angle of Schuylkill county, Pennsylvania, on Long Pine creek, or main branch of Mahantango. Population in 1820, 937.

Mahantango, Upper, township in the NW angle of Schuylkill county, on Little Mahantango. Population in 1820, 863.

Mahanuddy, or *Mahanady*, river of Hindoostan, which takes its rise in the NW part of Berar. It falls by several mouths into the bay of Bengal, at Cattack; these mouths form an assemblage of low woody islands. At the mouth of the principal

channel, near False Point, is a fortified island, named Cajung or Codjung.

Mahoning, river of Pennsylvania, rises by one large branch in the western part of Jefferson, and by another in the western part of Indiana. These branches interlock with the extreme western sources of the Susquehannah, and flowing westward, unite at Nicholasburg in the NW angle of Indiana, and the united stream continuing a little north of west about 20 miles, falls into the Alleghany river, 20 miles above Kittanning. The entire length of the Mahoning is about 50 miles.

Mahoning, northern township of Indiana county, Pennsylvania. Population in 1820, 1106.

Mahoning, NW township of Mercer county, Pennsylvania, traversed by the Shenango and Mahoning creeks. Population in 1820, 1647.

Mahoning, large creek, or small river, rising in Columbiana, Stark, Portage, and Trumbull counties, Ohio, enters Pennsylvania at the SE angle of the latter, and joins the Shenango, to form Big Beaver in Bethlehem county, Pennsylvania.

Mahoning, township of Columbia county, Pennsylvania, on the right side of Susquehannah river, including the village of Danville. Population in 1820, 1478.

Mahrattas, two large and powerful states of India, which derive their name from Mahrat, an ancient province of the Deccan. They are called the Poonah, or Western Mahrattas; and the Berar, or Eastern. Collectively they occupy all the S part of Hindoostan Proper, with a large proportion of the Deccan. Malwa, Orissa, Candeish, and Visiapour; the principal parts of Berar, Guzerat, and Agimere; and a small part of Dowltabad, Agra, and Allahabad, are comprised within their empire, which extends from sea to sea, across the widest part of the peninsula; and from the confines of Agra northward to the river Kishna southward; forming a tract of 1000 miles long and 700 broad. The western state, the capital of which is Poonah, is divided among a number of chiefs or princes, whose obedience to the paiswah, or head, like that of the German princes to the emperor, is merely nominal at any time; and, in some cases, an opposition of interests begets wars, not only between the members of the empire themselves, but also between the members and the head. Nagpour is the capital of the Eastern Mahrattas. Their armies are principally composed of light horse.

Maiden Creek, large branch of Schuylkill river, rising in the NW angle of Lehigh county, flows nearly south through Lehigh and Reading, and falls into Schuylkill, 6 miles above Reading.

Maiden Creek, township of Berks county.

Pennsylvania, along the Schuylkill on both sides of Maiden creek. Population in 1820, 1192.

Maine, north-eastern state of the United States; bounded by the Atlantic Ocean S E; New Hampshire SW; Lower Canada NW and N; and New Brunswick E.

	Miles.
Maine has an external limit on the Atlantic Ocean of - - -	200
On Passamaquoddy bay and St. Croix river - - -	100
A frontier curved limit on New Brunswick and Lower Canada	400
A limit in common with New Hampshire of - - -	150

Having an entire outline of - - -

Its area 35,000 square miles, or 22,400,000 acres.

Extreme south, N lat. 43 04, extreme north, N lat. 48.

The greatest length of Maine is by a line drawn from its SW to NE angle, 350 miles. Greatest width, nearly on lat. 45 N, 200 miles.

Extending through 5 degrees of latitude, very serious difference of climate is experienced at the two extremities of Maine. The inhabited Atlantic border has a comparatively mild climate. The surface of

the state, though not mountainous, may be viewed as rough and hilly. The soil, however, is generally well adapted to the purposes of agriculture, though varying very much in quality. The Atlantic border is indented and chequered more by peninsulas and islands than any other part of the coast of the United States. This highly diversified zone is followed by another more elevated; the falls of the rivers marking the line of separation. The inhabited part of the state extends about 100 miles inland, and is followed by a region abounding with lakes, and but imperfectly known.

Beside many of the lesser note, Maine is drained by the three fine rivers, Androscoggin, Kennebec, and Penobscot. The two former, are however in strictness, only one river. See the articles *Kennebec* and *Penobscot*. The sea border of this state, is in a peculiar manner remarkable for the number and excellence of its harbours; and the excessive rise and ebb of the tides, tends to break the ice, and preserve the harbours of this and all the other parts of the coast of the United States, NE from Cape Cod more open in winter than could be expected in ordinary cases, from relative latitude.

The principal productions of Maine, are grain, such as wheat, rye, oats, maize, and barley, meadow grasses, and flax. The immense interior forests, supply large quantities of lumber. The latter may indeed be viewed as the primary staple of the state. Its principal ports are, Portland, Hallowell, Penobscot, Bangor, and Eastport.

This state, has like other sections of New England, paid early and steady attention to the interests of education. Amongst its principal literary institutions, may be enumerated, Bowdoin college in Brunswick. The Maine Charity School at Bangor, and the Literary and Theological school or institution at Waterville. Maine was admitted a state of the United States, March 3d, 1820.

Politically Maine is subdivided into the counties of

Maine, river of Germany, which rises in the circle of Franconia, runs by Bamberg, Wurtzburg, Aschaffenburg, Hanau, and Francfort, and falls into the Rhine, at Mentz.

Maine, Upper, and Lower, two circles of Bavaria. The former including the principalities of Upper Bamberg, Bareuth, with the northern part of the Upper Palatinate. Lower Maine contains, the grand duchy of Wurtzburg, principality of Fulda, with part of the duchies of Hesse and Fulda. The two circles were in great part annexations made by the congress of Vienna in 1815, and extend over about 6,700 square miles, and peopled by 860,000 inhabitants.

Maine, or *Mayenne*, department of France, which includes the late province of the same name. It takes its name from the river Maine, which, soon after its junction with the Sarthe, falls into the Loire. Laval is the capital.

Maine and Loire, department of France, which includes the late province of Anjou. It has its name from two rivers of the same name. Angers is the capital.

Manerville, town of France in the department of Eure, and late province of Normandy. Lon. 1 26 E, lat. 49 2 N.

Mainland, the principal of the Shetland isles, 60 miles long, from N to S, but its breadth seldom exceeds six. The face of the country exhibits a prospect of black craggy mountains, and marshy plains, interspersed with some verdant spots, which appear smooth and fertile. Neither tree nor shrub is to be seen, except the juniper and the heath. The inhabitants are a stout, well-made, comely people; the lower sort of a swarthy complexion. The gentry are allowed, by all who have conversed with them, to be most of them polite, shrewd, sensible, lively, active and intelligent persons: they manufacture a strong coarse cloth for their own use, as also linen. They make likewise of their own wool very fine stockings. They export, besides the different kind of fish already mentioned, some herrings, a considerable quantity of butter and train-oil, otter and seal skins, and no inconsiderable quantity of the fine stockings just mentioned. Their chief trade is to Leith, London, Hamburgh, Spain, and to the straits. Kirkwall is the capital.

Maintenon, town of France, in the department of Eure and Loire and late province of Beauce, seated on the Eure between two mountains. It is five miles N by E of Chartres. Lon. 1 36 E, lat. 48 31 N.

Maire, Le, strait of South America, be-

tween Staten Island and Tierra del Fuego, in lat. 55 S. Through this strait ships sometimes sail in their passage to Cape Horn.

Maissy, town of France in the department of Calvados, and late province of Normandy. Lon. 1 2 W, lat. 49 24 N.

Maizant, *St.* ancient town of France, in the department of the two Sevres and late province of Poitou. It carries on a trade in corn, stockings, and woollen stuffs; and is seated on the Sevre, 26 miles SW of Poitiers. Lon. 0 7 W lat. 46 24 N.

Majas, pronounced and written but improperly Macas, a district of the province of Majas, and Quijos in Peru, now part of Colombia. It lies E from the Andes, on the sources of the Napo, nearly on the meridian of Washington, and from the Equator to lat. 2 30 S.

Majorca, island of Spain, 60 miles long and 45 broad, situate in the Mediterranean sea, between Ivica and Minorca. The whole coast is lined with strong towers. The NW part is mountainous; the rest produces good corn, olive-trees, fine honey, and delicate wine. It has no rivers, though there are a great many fine fountains and wells. The inhabitants are robust and lively, and make good sailors.

Majorca, strong city, capital of the island of the same name, and a bishop's see. The public squares, the cathedral, and the royal palace, are magnificent. It contains 4,000 houses, built after the antique manner; a university, more ancient than celebrated; and 22 churches, beside the cathedral. The harbour is extremely good. It is seated on the SW side of the island. Lon. 2 30 E, lat. 39 35 N.

Makefield, Lower, township of Bucks county Pennsylvania, on the Delaware, commencing opposite Trenton in New Jersey. Population in 1820, 1204.

Makefield, Upper, township of Bucks county Pennsylvania, along the Delaware, above Lower Makefield. Population in 1820, 1367.

Macarev, town of Russia, in the government of Niznei Novogorod, situate on the Volga, 24 miles ENE of Niznei Novogorod.

Makarief, or *Makaren*, town of Russia, in the government of Kostroma. It is the capital of the province of Unza, and situate on the river Unza, 80 miles E of Kostroma. Lon. 44 14 E, lat. 58 50 N.

Maker, village in Cornwall, seven miles SE of St. Germans, on an eminence, forming the W point of the Hamoaze, at Plymouth. The steeple of the church, called Maker Tower, is a noted seamark. Lon. 4 10 W, lat. 50 21 N.

Makoonda, town of Hindoostan, in the country of Allahabad, 66 miles S of Alla-

habad, and 110 NNE of Gurrah. Lon. 84 37 E, lat. 24 53 N.

Makran. See *Mecran*.

Malabar, western coast of the peninsula of Hindoostan, lying between 9 and 14 deg. N lat. It is divided among several petty princes and states. The customs and manners of the inhabitants are very different, as well as the productions. The people are, generally, of a dark, olive complexion, with long black hair, and good features. In some places they are distinguished into tribes, or casts, all of which are brought up to the same employments as their parents. These are the Gentoos, of whom see an account under the article *Hindoostan*.

Malacca, or *Malaya*, peninsula of Asia, containing several petty kingdoms, bounded on the N by Siam, E by the ocean, and SW by the strait of Malacca, which separates it from Sumatra. It is 560 miles in length, and 150 in breadth. It produces few commodities for trade, except tin and elephant teeth; but there are a great many excellent fruits and roots, pepper and other spices, with some precious gums and woods. The pine-apples are the best in the world; and the cocoa-nuts have shells that will hold an English quart. The inhabitants are fond of navigation, war, plunder, emigration, adventures, and gallantry. They talk incessantly of their honour and bravery, and speak the softest language of Asia; yet they are deemed the most treacherous, ferocious people on the face of the globe. Their religion is a mixture of Mahometanism.

Malacca, seaport, and the capital of a kingdom of the same name, in the peninsula of Malaya, seated on the strait of its name, 480 miles SE of Acheen. Lon. 102 5 E, lat. 2 12 N.

Malaga, seaport and episcopal town of Spain, in Grenada, with two castles, and a good harbour. Its commerce is principally in raisins and excellent wines; and it has a manufacture of cards. The inhabitants are about 40,000. It is seated on the Mediterranean, surrounded by hills, 70 miles WSW of Grenada. Lon. 4 10 W, lat. 36 35 N.

Malden, borough in Essex, with a market on Saturday; seated on an eminence, on the river Blackwater. It has two parish churches; and a third, which it had formerly, has been long converted into a free-school. Vessels of a moderate burden come up to the town, but large ships are obliged to unload at a distance below, in Blackwater bay. The custom of Borough-English is kept up here, by which the youngest son, and not the eldest, succeeds to the burgage tenure, on the death of his father. This town carries on a considerable trade, chiefly in corn, salt, coal, iron, deals, and wine. It is 10 miles E of Chelmsford, and 37 NE of London.

Malden, village in Surry, two miles SE of Kingston, with some gunpowder mills, on a stream that flows from Ewel to Kingston.

Malden, Fort, now in ruins, was situated on the river Detroit, Essex county, Upper Canada, opposite Isle au Bois Blanc; it is a post of considerable importance. The village now Amherstburg contains about one hundred houses. The anchorage between the island au Bois Blanc and Amherstburg is perfectly safe, and the shore of the main convenient for the erection of wharves and other naval and commercial purposes. See *Amherstburg*.

Malta, an island in the Mediterranean, between Africa and Sicily, 20 miles long, and 12 broad. It was formerly reckoned a part of Africa, but now belongs to Europe. It was anciently little else than a barren rock; but such quantities of soil have been brought from Africa, that it is now become a fertile island. They sow, however, but little corn, because they can purchase it cheap in Sicily; but they cultivate large quantities of lemon, cotton-trees, and vines, which produce excellent wine.—The number of inhabitants is said to be about 90,000, who speak Arabic and Italian. After the taking of Rhodes, the emperor, Charles V. gave this island to the grand master of the order of St. John of Jerusalem. It was attacked by the Turks in 1566, who were obliged to abandon the enterprise with the loss of 30,000 men. The knights of Malta formerly consisted of eight nations; but now they are only seven, the English having forsaken them. They were obliged to suppress all pirates, and were at perpetual war with the Turks and other Mahometans, and all under a vow of celibacy and chastity. Malta is extremely well fortified; the ditches, of a vast size, are all cut out of the solid rock, and extend many miles. The island was taken by General Bonaparte in the outset of his expedition to Egypt, on the 12th June 1798, when he found in it 1200 cannons, 200,000 lb. of powder, 2 ships of the line, a frigate, 4 galleys, and 40,000 muskets; besides an immense treasure collected by superstition; and 5400 Turkish prisoners,

whom he set at liberty. It was soon afterwards taken by the British, but at the peace of Amiens it was stipulated that it should be restored to the knights. The British, however, retained possess on, and the war recommenced between the two nations; but, by the treaty of Paris, in 1814, this island has been guaranteed to Great Britain. Valette is the capital. It is about 60 miles S of Sicily, and 200 E of Tunis in Africa.

Manchester, large and populous town of Lancashire, between the rivers Irk and Irwell, and is a place of great antiquity. It has been long noted for various branches of the linen, silk, and cotton manufactures, and is now principally conspicuous as the centre of the cotton trade, which has been much improved by the invention of dying and printing. The labours of a very populous neighbourhood are collected at Manchester, whence they are sent to London, Liverpool, Hull, &c. These consist of a great variety of cotton and mixed goods, of which they export vast quantities, particularly to the West Indies, and the coast of Guinea. The manufactures of tapes and other small wares, of silk goods, and of hats, are also carried on at Manchester; from which various sources of wealth it has attained greater opulence than almost any of the trading towns in England. Its chief ornaments are the college, the exchange, the collegiate church, another large church, and a spacious market place. By the Irwell, over which is an ancient and lofty stone bridge, it has a communication with the Mersey, and all the late various extensions of inland navigation, particularly the duke of Bridgewater's canal which is seven miles from it. Manilla. See *Luconia*.

Manilla, large and populous city, capital of Luconia and the other Phillippine Islands. Most of the public structures are built of wood, on account of the frequent earthquakes, by one of which in 1617, a mountain was levelled; in 1625 a third part of the city was overthrown by another, when 3000 persons perished in the ruins; and, the next year, there was another less violent. This city is seated on the SE side of the island, where a large river falls into the sea, and forms a noble bay 30 leagues in compass to which the Spaniards have given the name of Bahia, because the river runs out of the great lake Bahi, which lies at the distance of six leagues behind it. On the S it is washed by the sea, and on the N and E by the river; being also strongly fortified with wall, bastions, forts, and batteries. Manilla contains about 30,000 souls, who are a very motley race. Here stands the arsenal where the galleons are built, for which there are from 300 to 600 or 800 men constantly employed, who are relieved every month, and while upon duty, are maintained at the king's expense. Mantaca. See *Mataca*.

Mantshures, conquered China in the 17 century. Their country lies N from

China, and with the utmost absurdity, generally called Eastern Chinese Tartary, in our geographical works. The Tartars, Mongols, and Mantshures, are essentially different nations, more so, even, than are the French, Germans, and Russians. It would be as correct to call the people of the United States, northern Spaniards, as to designate the Mantshures, Mongols, or Tartars.

Mantshuria, vast region in Asia, having China proper S; Mongolia W; the Russian Asiatic territories NW and N; and the sea of Japan, and the Channel of Tartary or La Peyrouse straits E. It is in a great part occupied by the basin of the Amur, and separated from Asiatic Russia by the vast chain of Yablonoy mountains, stretching from Kiachta, to the sea of Ochotsk, between the basins of the Amur, and Lena rivers. It was one of the native chieftains of this country who in 1644, took advantage of the revolution in China, which terminated the dynasty of Ming, in the person of the emperor Zunt-chin, or Tong-tching, and placed himself on the throne of China, and established the now reigning dynasty of Dyn-Tsing. Of the Mantshur family there have been five monarchs: Thunti, Cang-hi, Kong-tching, Kieulong, and Kai-king. It is very remarkable that two of the Manshur-Chinese sovereigns have jointly reigned 124 years; Cang-hi from 1661, to 1721, 60 years; and Kien-long from 1735, to 1799, 64 years.

Mantes, town of France, in the department of Seine and Oise, and late province of the Isle of France. It is famous for its wines, and is seated on the Seine, and over it is a bridge, the great arch of which, although elliptic, is 120 feet wide. It is 31 miles NW of Paris. Lon. 1 51 E, lat. 49 1 N.

Mantina. See *Tripholizza*.

Mantua, or *Mantuan*, duchy of Italy, lying along the river Po, which divides it into two parts. It is bounded on the N by the Veronese, on the S by the duchies of Reggio, Modena, and Mirandola; on the E by the Ferrarese; and on the W by the Cremonese. It is 50 miles long and 27 broad, and fruitful in corn, pastures, flax, fruits, and excellent wine. The Mantuan comprehends the duchies of Mantua and Salconeta; the principalities of Castiglione Solferina, and Bosolo; likewise the county of Novellara. The principal rivers of this country are the Po, the Oglio, and the Minchio.

Mantua, capital of a duchy of the same name, in Italy, with an archbishop's see, and a university, seated on an island in the middle of a lake. The

streets are broad and straight, and it has eight gates, 21 parishes, 40 convents and nunneries, a quarter for the Jews to live in, and above 16,000 inhabitants. It was greatly noted for its silks, and silk manufactures, which are now much decayed. The air in the summer is very unwholesome; and the lake is formed by the inundations of the Mincio. Virgil was born at a village near this city. It is 35 miles NE of Parma, 22 SW of Verona, and 220 N by W of Rome. Lon. 10 50 E lat. 45 10 N.

Mantua, village on the Schuylkill, opposite the Philadelphia upper bridge and in Blockly township. It is strictly a suburb of Philadelphia; its situation is peculiarly eligible for a summer residence to the wealthy inhabitants of the city. The site swells gradually from the Schuylkill and gives a rich variety to the various buildings, and gardens by which it is decorated.

Marseilles, flourishing sea-port of France, in the department of the Mouths of the Rhone. The inhabitants are computed at 90,000. It was so celebrated in the time

of the Romans, that Cicero styled it the Athens of the Gauls, and Pliny called it the Mistress of Education. It is situated on the Mediterranean, at the upper end of a gulf in which are many small islands; and is partly on the declivity of a hill, and partly in a plain. It is divided into the Old Town and the New. The first appears like an amphitheatre to the vessels which enter the port; but the houses are mean, and the streets dirty, narrow, and steep. In this part is the principal church built by the Goths, on the ruins of the temple of Diana. The New town is, in every respect, a perfect contrast to the city, with which it has a communication by one of the finest streets imaginable. The other streets and squares, as well as the public buildings in general, are very elegant. With respect to commerce, Marseilles has been eminent since the days of antiquity; and is now sometimes called Europe in miniature, on account of the variety of dresses and languages. The port is a basin of an oval form, 3180 feet long, 960 broad at its widest part, with 18 or 20 feet depth of water. In the environs of Marseilles are near 5000 little country boxes of the citizens, called *Bastides*. In 1640 the plague raged with great violence in Marseilles, and with still greater in 1720, when it carried off 50,000 of the inhabitants. The late Lord Gadenstone mentions, that Marseilles was a little republic within itself, that the citizens elected their own magistrates, and that the expense of a law-suit never exceeded *twopence-halfpenny*, which sum was lodged by each party with the clerks of court, at the commencement of every process; after which no farther expense was incurred. Marseilles is 15 miles S of Aix, 13 NW of Toulon and 362 S by E of Paris. Lon. 5 27 E, lat. 43 18 N.

Marshall's Mills, post office in Huntingdon county Pennsylvania.

Marshallsville, post village, Mecklenburg county Virginia, 65 miles SW of Petersburg.

Marshfield, town in Gloucestershire, on the Cotswold hills, 11 miles E of Bristol, and 103 W of London.

Marshfield, post town and township, Washington county Vermont, 12 miles E from Montpelier. Population 520.

Marshfield, post town in Plymouth county, Massachusetts; situated near Marshfield point, 36 miles SE of Boston. It had 1364 inhabitants in 1810, and in 1820, 1532.

Marsilly, town of France in the department of Marne, 10 miles S of Suzanne.

Marsstrand, rocky island of Sweden, in the Categat, lying NW of the mouth of the Gotha. It is two miles in circumference; and, on account of its strength, is called the Gibraltar of Sweden. The town stands on the E side, and the harbour is secure and commodious, but of difficult entrance. The inhabitants subsist chiefly by the herring fishery, by the number of ships which in bad weather take refuge in the harbour, and by a contraband trade. It is 23 miles NW of Gotheborg. Lon. 11 30 E, lat. 57 59 N.

Marta, town of Italy, in the patrimony of St. Peter, seated on a river of the same name, where it issues from the lake Bolsena, 10 miles E of Castro.

Martaban, city of Pegu, capital of a province of the same name, fertile in rice, fruits, and wines of all kinds. It was a rich trading place before the king of Birmah conquered the country, who caused a number of vessels to be sunk at the mouth of the harbour, so that it is now only to be entered by small vessels. The chief trade is in earthenware and fish. It is seated on the bay of Bengal, at the mouth of the Thalaw, 120 miles SE of Pegu. Lon. 97 56 E, lat. 16 30 N.

Martago, town of Spain, in Leon, 10 miles SSE of Ciudad Rodrigo.

Martha St. province of Terra Firma, bounded on the N by the Caribbean sea, E by Venezuela, S by New Granada, and W by Carthagenia. It is a mountainous country, and the land very high. It abounds with fruits proper to the climate, and there are mines of gold and precious stones, and salt-works. Here the famous ridge of mountains begin, called the Andes, which runs S the whole length of South America.

Martha St. capital of a province of the same name in Terra Firma, with a bishop's see, and a harbour surrounded by high mountains. It was once flourishing and populous, when the Spanish galleons were sent thither, but is now almost come to nothing. The air about the town is wholesome and the houses are built of canes, and covered mostly with palmetto leaves. It is seated on one of the mouths of the Rio Grande, 1000 miles W by S of the Rio-de-la-Hacha. Lon. 73 56 W, lat. 11 24 N.

Martha's Vineyard, island near the coast,

and forming part of Dukes county, Massachusetts, 80 miles S of Boston. It is 21 miles long, with a mean width of 6. Population 3000. The island produces grain sufficient for the inhabitants, with abundance of cattle and sheep. The harbour of Holmes' Hole, on the north side is the only port of consequence. Chief town, Edgartown. The inhabitants apply themselves chiefly to their fisheries, in which they have great success. Lon. 70 22 W, lat. 41 16 N.

Murthalen, considerable town of Switzerland, in that part of the county of Kyburg, subject to Zurich. It is seated near the Rhine, six miles S of Shaffhausen.

Martic, township of Lancaster county, Pennsylvania. It is situated on the NE side of Susquehannah and the SE side of Pique creek. Population 1810 1623, and in 1820 1701.

Martigues, seaport of France, in the department of the mouths of the Rhone and late province of Provence, near a lake, 12 miles long and five broad, which is navigable throughout, and whence they get very fine fish and excellent salt. Martigues is 20 miles NW of Marseilles. Lon. 5 2 E, lat. 43 19 N.

Martin, county of Halifax district, North Carolina, containing 5987 inhabitants in 1810. The chief town Williamstown.

Maryland is the most irregular in its form of any state of the United States, and contains the least surface when compared with its outline. It is also, in point of surface, soil, and climate very much diversified. All those parts of Maryland lying east from Chesapeake bay, and west of that stream to the head of tide water, may be considered as alluvial in their formation, and comparatively level and sandy. Above tide water the surface rises, though not very rapidly, into hills which reach the foot of the mountains. The soil of this middle zone is the best in the state. The mountainous region includes the residue and presents the common features of the Appalachian system.

Maryland is the first state of the United States SW from Delaware river, which embraces the three great zones of soil; that of alluvion, hilly, and mountainous. In the annexed table, the counties are distinguished which occupy each zone respectively.

The alluvial soil is generally level and sandy, but where due attention has been paid to agriculture, produces good crops of grain, tobacco and even cotton

towards the south. The middle, or hilly section, and some of the mountain valleys are amongst the best parts of the United States for the production of grain, grass, and orchard fruit, tobacco, flax, and hemp. The flour and tobacco, of some places on the higher waters of the Potomac, are justly estimated for their excellence.

Commercially, Maryland is naturally connected with some of the best uncultivated, most populous, and wealthy counties of Pennsylvania, good roads extend from Baltimore, to Washington city, Frederickstown, and Hagerstown. That to the latter extends up the Potomac to Cumberland, and from thence to Brownsville, in Pennsylvania. Part of this road has been constructed by the United States, and is toll free. The distance from Baltimore to Brownsville, by Frederickstown, Hagerstown, Hancockstown, and Cumberland is 21 miles being the shortest line of connexion, between the Atlantic ports, and the navigable waters of Ohio.

Other roads intersect the state of Maryland, and connect it with the neighbouring states, particularly Pennsylvania, and facilitate intercommunication with Baltimore. The trade of the Susquehanna, is, however, that which enters most at Baltimore, and has contributed greatly to the rapid increase of that city. See *Baltimore*. The legislature, and people of Maryland, seem recently to have awakened to a full sense of the immense advantages naturally flowing down with the stream of the Susquehanna, and also to these to be derived from opening a water communication between Chesapeake and Delaware bays. It has been supposed that the produce already (October 1822.) brought down in the current year, from the Susquehanna, exceeds in value 1,000,000 dollars, and must annually increase. It is only necessary to examine the position of Baltimore on a general map of the United States, to perceive its admirable situation as a commercial mart.

Maryland produces in itself. Iron ore, and mineral coal, with inexhaustible masses of limestone, and other building stone. Furnaces and forges have been long established in this state. Flour and tobacco are its most abundant, and valuable staples. Its manufactures are numerous, and increasing. In the value of its shipping, it ranks as the third state of the United States. In 1815, the tonnage exceeded 156,000. For the interests of education in Maryland, see *Baltimore*.

Politically, Maryland is subdivided into the counties of:

Counties.	Population.
Alleghany	Mountainous 8,654
Anne Arundel	Hills & alluvion 27,165

Of this mass, in 1820, there were found whites 260,222; free blacks, 39,730; slaves 107,398.

In respect to pursuit or employment, the population of Maryland in 1820, were thus classed:

Engaged in Agriculture	-	-	79,135
Do. in Manufactures	-	-	18,640
Do. in Commerce	-	-	4,771

There were in the state, 3776 unnaturalized foreigners.

Population to the square mile, 37.

Progressive population since 1790, inclusive. In 1790, 319,728; in 1800, 349,692; in 1810, 380,546; and in 1820, 407,350.

Maryport, town in Cumberland, with a good harbour. In 1750, it was only a poor fishing town; but it has now upwards of 3000 inhabitants, who employ many vessels, from 50 to 250 tons burden, in the coal or coaling trade. Here are two shipyards and a cotton manufacture, and close by is the Roman station, Virosidum, where several altars and statues have been dug up. Maryport is situate at the mouth of the Elen, in the Irish sea, 27 miles SW of Carlisle, and 297 NNW of London. Lon. 3 22 W, lat. 54 35 N.

Marysburg Township, in the county of Prince Edward, Upper Canada, is situated at the eastern end of the peninsula, which forms the bay of Quinte, and lies open to lake Ontario on the south.

Marysville, post town and seat of justice, Charlotte county, Virginia, on Wards-fork of Little Roanoke, 35 miles SE from Lynchburg; and 60 SSW from Richmond.

Marysville, post village, Campbell county, Virginia.

Marysville, small town and seat of justice for Union county, Ohio, on Mill creek, 15 miles SW from Delaware, and 27 NW from Columbus.

Marysville, post town and seat of justice, Blount county, East Tennessee, 12 miles a little west of south from Knoxville.

Marysville, post town, Harrison county, Kentucky, on the main north-east fork of Licking river, about 45 miles by land above Newport, opposite Cincinnati.

Marza Siroco, gulf on the SE side of the isle of Malta. The Turks landed here in 1565, when they went to besiege Valetta. It is now defended by three forts, two at the entrance of the gulf, and one at the point of land that advances into the middle of it.

Marzilla, town of Spain, in the province of Navarre, near the river Arragon, 30 miles S of Pamplona.

Mus d'Agenois, town of France, in the department of Lot and Garonne, on the river Garonne, 24 miles NW of Agen, and 50 SE of Bourdeaux.

Mus d'Asil, town of France, in the department of Arriège, with a benedictine abbey: seated on the rivulet Rise, eight miles SW of Pamiers.

Masafuero, island in the Pacific Ocean, 80 miles W of Juan Fernandez. It is high and mountainous, but lowest to the N, and at a distance appears like one hill or rock. It is of a triangular form, about 25 miles in circumference, and uninhabited, except by numerous seals and goats. There is also plenty of wood, but difficult to be got off, as the heavy surf allows of no good landing place. Lon. 51 40 W, lat. 33 40 S.

Masbate, one of the Philippine islands, almost in the centre of them. It is 80 miles in circumference, and the natives are tributary to the Spaniards. Lon. 122 25 E, lat. 11 56 N.

Masbrough, village in West Yorkshire, on the river Don, adjoining the bridge of Rotherham. Here are considerable iron works, where all sorts of hammered and cast iron goods are made, from the most trifling article to a large cannon, of which great quantities are exported.

Mascara, the western province of the kingdom of Algiers, 370 miles long and 130 broad. It is dry, barren, and mountainous, except on the N side, where there are plains abounding in corn, fruit, and pastures. The S parts are inhabited by independent wandering tribes, particularly the Angad tribe.

Mascara, capital of the province of the same name, in the kingdom of Algiers, with a strong castle, in which the bey resides. In 1732 it was an inconsiderable place; but is now the only one in the kingdom, which, under the domination of the Turks, perceptibly increases in prosperity

and extent. It is not so large as Tremesan, but surpasses it in beauty, having a great number of good houses and newly erected mosques. It stands in the centre of a fertile and populous district, 45 miles ESE of Oran, and 190 SW of Algiers.—Lon. 0 40 E, lat. 35 54 N.

Mascat, seaport of Arabia Felix, and the chief town in the province of Oman, with an excellent harbour. It has a castle on a rock, and is very strong both by nature and art, though the buildings are mean. It was taken, in 1568, by the Portuguese, who retained it for a century and a half. The cathedral, built by the Portuguese, is now the king's palace. There is no vegetation to be seen on the seacoast near it, and only a few date-trees in a valley at the back of the town, though the inhabitants have all things in plenty. The weather is so hot from May to September, that no people are to be seen in the streets from ten in the morning till four in the afternoon. The bazars or market places are covered with the leaves of date-trees, laid on beams which reach from the house tops on one side to those on the other. The products of the country are horses, dates, fine brimstone, coffee, and ruinosa, a root that dies red. Lon. 57 26 E, lat. 24 0 N.

Mascomy, river of New Hampshire, which rises between Dorchester and Lyme, flows into, and carries the water of Mascomy Pond into Connecticut river, 5 miles below Hanover.

Mas d'Asil, town of France, in the department of Arriège and late county of Foix, with a late rich Benedictine abbey. It is seated on the rivulet Rise, 8 miles S W of Pamiers.

Maskelyne's Isles, group of small but beautiful islands, in the South Pacific Ocean, lying off the SE point of Malicollo, one of the New Hebrides.

Maskinonge, river of Lower Canada, flows from a Pond of the same name, on the line between Warwick and St. Maurice counties, Lower Canada, flows SE, and falls into the head of lake St. Peters.

Maskinonge, SW seignior of St. Maurice county, Lower Canada, on lake St. Peters, on both sides of Maskinonge river.

Mason, township of Hillsborough county, New Hampshire, 36 miles S from Concord. Population in 1820, 1313.

Mason, county of Virginia; bounded by Ohio river W and NW; by Wood NE; Kenhawa SE; and Cabell SW. Length 40; mean width 20; and area 800 square miles. This county is washed in its entire length by Ohio, and traversed by Great Kenhawa river. Surface very broken and hilly, though much of the soil near the streams is excellent. Considerable quantities of salt is made on Kenhawa river from salt water procured by deep digging. Sta-

pies of this county, grain and flour. Chief town, Mount Pleasant.

Massachusetts, in point of soil, is divisible into three distinct zones ; mountainous in the west, hilly in the central ; and low and sandy in the eastern, or rather south-eastern sections. The state is traversed

by three ranges of mountains; one along its western border, separating the basins of the Housatonic from the creeks flowing into the Hudson; a second separating the basins of the Housatonic and Connecticut; and a third between the Connecticut basin, and the streams discharging east and south-east into the Atlantic Ocean. The last range is not, it is true, a compact ridge, but is nevertheless intitled to the distinction of a mountain, and produces on the geographical features of the state all the effect arising from mountain scenery.

East and south-east of this latter ridge, the soil of Massachusetts is comparatively of an inferior quality, and receding from the mountains towards the sea imperceptibly sinks from hills to plains, flat sandy and sterile. This level and sandy character, is, however, in a great degree confined to the southeast counties. In Norfolk, Middlesex, and Essex counties, the hills approach the ocean and the tide, from the rapid acclivity of the country, ascends but a very short distance inland. Beyond the eastern range of mountains, the valleys of Massachusetts, possess a fine, deep, strong, and in many places, an exuberantly fertile soil. The counties of Berkshire, Franklin, Hampden, and Hampshire, are amongst the most diversified, and best cultivated tracts in the United States; producing grain pasturage, and orchard fruits, in abundance.

Of mineral productions, iron and marble are the only substances of great value found plentifully in this state. Iron is found in Plymouth, and in several other parts of the state; marble is quarried and wrought to considerable extent near Stockbridge. The fine granite of Chelmsford, and Teigamouth, is brought to Boston by the Middlesex canal.

In a commercial point of view, Massachusetts is well situated. Its coast is indented by a number of fine bays, of which the harbours of Boston, Salem, and Plymouth, are the principal. Connecticut river traverses the state; and Merrimac enters the ocean in its NE angle. From the latter stream to Boston harbour, a fine navigable canal conveys the lumber, stone, and other products of its shores to a profitable market. The obstructions in Connecticut river, have been so far removed, or remedied by short canals, as to open that stream to boat navigation, above the northern limit of Massachusetts.

From the epoch of the first settlement of the colonies of Plymouth, and Massachusetts bay, from which were formed the present Massachusetts, its inhabi-

itants have been distinguished for their steady attention to the interests of education. Harvard university at Cambridge holds the first rank in the literary institutions of the United States. The theological seminary in Andover, Williams college in Williamstown, and Phillips academy in Andover, are all highly respectable institutions. Academies have been established throughout the state, in all the principal towns; and common schools are universal. According to Mr. Morse, there were in 1817, 401 religious congregations; of these, 366 were congregationalists; 91 were baptists; 32 were friends; 14 were Episcopalians and 8 presbyterians.

The manufactures of Massachusetts are extensive and valuable. As early as 1810, their value amounted to near 22,000,000 of dollars. With the political changes, since that epoch the manufacture of Massachusetts, like those of the other states of the United have fluctuated, but still remain flourishing and respectable. Boston in respect to tonnage is the first port, and Massachusetts the first state in the confederacy. With Maine in 1815, the joint tonnage amounted to upwards of 452,000 tons. The citizens in the seaport towns of this state, are very generally engaged in the fisheries.

The staple exports, are, Lumber, whale oil, various manufactures, salted provisions and ardent spirits. In 1820, the domestic produce exported amounted to \$3,861,435.

Politically Massachusetts is subdivided into the following counties.

Massachusetts bay, is that part of the Atlantic ocean E from Massachusetts, between cape Cod, cape Ann, and the coast.

Massacre Isle, island of Alabama, to the west from Dauphin island.

Masserne Mountains. This chain has but recently been introduced to public notice, though a very distinct system, and though unequal, in mass or in elevation to the Alleghanies or Appalachian, is very little, if any less extensive as to range. The Masserne rises first into regular mountain ridges in Missouri, about 70 miles SW from St. Louis, and preserving a SW direction through Missouri, Arkansas, and Texas, is lost towards the Rio Grand del Norte. It is pierced by the Arkansas, Red, Brasos à Dios and Colorado rivers. Its geological structure has never been scientifically examined, and the result published. There is a very remarkable parallelism, between the Appalachian and Masserne systems, and the very singular curvature produced on its rivers by the former, is also produced by the latter.

Population to the square mile, 44.

Mercer, county of Ohio; bounded W by Indiana; N by Vauwert; E by Allen and Shelby; and S by Darke. Length 25; breadth 24; and area 560 square miles. The surface of this county is generally level, and in part marshy. An extensive inunda-ted tract in its centre gives source to the Wabash and Miami rivers. The soil, where sufficiently dry for agricultural pur-poses, is excellent. It was formed from the new purchase, and therefore not includ-ed in the census of 1820.

Mercersburg, post town, Franklin county, Pennsylvania, on the west branch of Cone-gocheaque, 16 miles SW from Chambers-berg.

Merdin, town of Turkey, in Diarbeck, with a castle which passes for impregnable. The country about it produces cotton. It is 45 miles SE of Diarbekar. Lon. 39 59 E, lat. 36 50 N.

Merecz, town of Poland in Lithuania, seated at the confluence of the Berezhno and Merecz, 30 miles N of Grodno. Lon. 24 10 E, lat. 50 0 N.

Meredith, township of Strafford county, New Hampshire, containing 1940 inhabi-tants in 1810. It is about 72 miles NW of Portsmouth. Population in 1820, 2416.

Meredith, post village and township, of Delaware county, New York, 8 miles N from Delhi. Population in 1820, 1375.

Mergui, seaport town of the Birman empire, on Tannaserim river, 6 miles above its mouth. Lon 98 23 E, lat. 12 12 N.

Mergui Islands, a group lying off the western coast of Malacca; they extend from N to S about 140 miles along the Malay coast, with a strait intervening of from 12 to 20 miles wide.

Merida, town of Spain in Estramadura, said to have been built by the Romans, before the birth of Christ. Here are fine remains of antiquity, particularly a triumphal arch. It is seated in an extensive and fertile plain, 45 miles S by E of Alcantara. Lon. 6 4 W, lat. 38 42 N.

Merida, intendency of Mexico, embracing most of the peninsula of Yucatan. Area 46,000 square miles. Population 466,000.

Merida, city of Mexico, in Merida, of which intendency it is the capital; about 70 miles NE from Campeachy. Population 10,000.

Meriden, township and post village, New Haven county Connecticut, 17 miles N from New Haven. Population in 1820, 1309.

Meridien, post village Madison county, Missouri.

Merion, Lower, township of Montgomery county Pennsylvania, the lowest of the two townships of that county SW from the Schuylkill. Its E angle is five miles above Philadelphia. Population 1820, 2,256.

Merion, Upper, township of Montgomery county Pennsylvania, above the preceding. Population in 1820, 1285.

Merionethshire, county of North Wales, bounded on the N by Carnarvonshire and Denbighshire, on the E by the county of Montgomery, on the S by Cardiganshire, and on the W by the Irish Sea. It is 36 miles long and 34 broad. The principal rivers are the Dee and Dovy; and it has a great mountain, the Cader Idris, one of the highest in Wales. The air of this country is sharp but it feeds great herds of cattle. Merionethshire contains six hundreds, four market-towns, 37 parishes, and sends one member to parliament. Harlech is the capital. Population in 1801, 29,506; in 1811, 30,924; and in 1821, 33,911.

Meritz, Meritch, or *Merrich*, an important fortress and city of the Deccan of Hindoostan, situated near the N bank of the river Kistna, 70 miles SW of Visiapour.

Merk, river of the Netherlands, which running N by Beda, afterward turns W, and falls into the Maese, opposite the island of Overflackee, in Holland.

Mermentau river, rises in the prairies of Opelousas, interlocking with the sources of

the Calcasieu and Teche. The Mermentau is formed by the Nezpique, Cane, Plaquemine Brulé, and Queue Tortue. This stream may indeed be strictly called the river of Opelousas, as it drains the central parts of that district, and all the intermediate ground between the water courses except a very narrow strip of wood on their immediate banks is prairie. The whole country watered by this river is flat and totally without stone, not even a pebble is to be seen. The timber in the woods is oak, hickory, ash, sweet gum, in the swamps cypress, and many other kind of trees; pine is also found in more or less quantity on all the confluent of Mermentau, but towards the northwest sources of the Nezpique this tree is found in great abundance: oak is however the principal timber. Below the junction of the Plaquemine Brulé, Cane and Nezpique, live oak begins to appear, and towards the sea coast is found in considerable quantity growing upon low ridges which run parallel, to and appear to have been at some past time isles in the gulf. The tide rises in the Mermentau above the junction of Nezpique, Cane, and the Plaquemine Brulé: however, when the waters of the Sabine Calcasieu and Mermentau, are swelled by rain, and the wind NW, N, or NE winds prevail, no tide passes their respective outlets. The soil on Mermentau is generally sterile, though superior in fertility to those on the Calcasieu and Sabine.

Mermentau Lake, is in every respect similar to those of the Sabine and Calcasieu, except in point of extent, being considerably less extensive than either of the two latter. Mermentau lake is less destitute of timber along its border than the other lakes westward, though the greatest part of the extent in its vicinity is a grassy morass. The outlet from the lake to the sea, is about one fourth of a mile wide, very winding, and in many parts dilated into small lakes. A bar at the mouth prevents the entrance of vessels drawing more than four feet water.

Merom, post town and seat of justice, Sullivan county, Indiana. See *Meriam*.

Mero, strong town of Asia, in the peninsula beyond the Ganges, and in the kingdom of Pegu, 140 miles SW of the town of Pegu. Lon. 98 36 E, lat. 16 0 N.

Merou, town of Persia, in Korasan, seated in a fertile country, which produces salt, 112 miles SW of Bockhara. Long. 64 25 E, lat. 37 40 N.

Merrimack, river of the United States, which rises in Grafton county, New Hampshire, and after running in a SE direction through the state, enters Massachusetts, near Dunstable. It then makes a sudden turn to the NE and empties into the Atlantic Ocean at Newburyport. Its course

is very crooked, and the navigation interrupted by frequent falls and cataracts. The Merrimack basin is about 130 miles in length, with a mean width of 36; and embraces an area of 4350 square miles. The navigation of this stream has been more improved by art than any other stream of the United States. Newbury port stands on the south side of the bay at its mouth; vessels of 100 tons ascend to Haverhill, 12 miles to the head of tide water. From Haverhill to Concord the navigation of the Merrimack is artificially improved. The Middlesex canal was cut from Boston Harbour, to the banks of the Merrimack at the falls above Chelmsford. The great feeder of this canal is Concord river, flowing north out of Massachusetts, and precipitated from the table land of Middlesex, into the valley of the Merrimack below Chelmsford. The canal commences above Patucket falls. It is carried over, and on the level of Concord river 11 miles, and thence down the sloping intervening ground to Boston harbour. The whole length of this fine canal is 29 $\frac{3}{4}$ miles, an entire fall 1007 feet, by 13 locks. The canal is 24 feet wide, with a depth of 4 feet. The locks are 90 feet by 12 feet, and of excellent masonry. Another fall has been cut around Patucket falls in order to connect the navigable water above, and the Middlesex canal with the tide water below. The Patucket canal does not reach tide water, but, below the falls the stream though rapid is navigable, and in 45 miles falls 36 feet, and reaches the tide at Haverhill. Above the outlet of the Middlesex canal, three other short cuts at several places. The Bow canal occurs first below Concord; is followed 6 miles still lower down by Hookset canal; Amoskeag canal was made eight miles below Hookset; and in nine miles below the latter six short cuts have been made round as many rapids or falls. Cromwell's falls have also been passed by a canal 14 miles below Amoskeag; and 15 miles still lower is the Wicase canal, the last above that of Middlesex. See *Massachusetts* and *New Hampshire*.

Merrimack township, of Hillsborough county, New Hampshire, containing 1592 inhabitants in 1810, and in 1820, 1162.

Merrimack, river of Missouri rises in Franklin county, flows NE through Franklin, and separating Jefferson, from St. Louis, falls into the Mississippi, five miles below the town of St. Louis.

Merrittstown, post village, Fayette county Pennsylvania, on Dunlap's creek, five miles S from Brownsville.

Merryhill, post village, Bertie county North Carolina.

Merrymeeting bay, junction of the Kennebec and Androscoggin rivers, in Maine.

Mersburg, town of the circle of Saxony,

in Misnia, with a bishop's see. It has a Lutheran bishopric, and is seated on the Sala, 10 miles S of Halle, and 56 NW of Dresden. Lon. 12 6 E, lat. 51 28 N. It now gives name to a government of Prussia.

Mersea, town of Essex county, Upper Canada, on Lake Erie.

Mersey, river which rises in the N extremity of the Peak in Derbyshire, passes by Warrington, and receives the Weaver at Frodsham, where it forms a broad estuary, below Liverpool, and enters the Irish Sea. This river not only affords salmon, but is visited by annual shoals of smelts, here called sparlings, of a remarkable size and flavour. It is connected by the Staffordshire canal with the Trent and in course with the Irish Sea and the German Ocean.

Mersey Island, island in Essex, between the mouth of the Coln and the entrance of Blackwater Bay. It has two parishes called E and W Mersey.

Mereburg, town of Germany in the circle of Suabia, and bishopric of Constance, seated on the N side of the lake of Constance. It is the bishop's usual place of residence, and is 11 miles from the town of that name. Lon. 9 26 E, lat. 47 45 N.

Mertola, strong town of Portugal, in Alentejo, seated near the Gaudians, 60 miles S of Evora, and 100 SE of Lisbon. Lon. 7 40 W, lat. 37 30 N.

Merton, village near Oxford, situated near two military ways. There were entrenchments in the neighbouring woods, supposed to be thrown up by king Ethelred or the Danes, whom he defeated in 871.

Merton, village in Surry, seated on the Wandel, seven miles SW of London. Nothing remains of its once famous abbey, but the E window of a chapel, and the walls that surrounded the premises, which are built of flint, are nearly entire, and include about 60 acres. Upon the site of this abbey are two calico manufactures, and a copper mill; and about 1000 persons are now employed on a spot once the abode of monastic indolence. Merton is seven miles SW of London.

Merve, the N branch of the river Maese, on which the city of Rotterdam, in Holland is seated.

Merville, town of France, in the department of the North, and late province of French Flanders, seated on the Lis, 10 miles SE of Cassel. Lon. 2 43 E, lat. 50 57 N.

Mesched, considerable town of Persia, in Korasan, fortified with several towers, and famous for the magnificent sepulchre of Iman Risa, of the family of Ali, to which the Persians pay great devotion. It is

seated on a mountain, in which are found fine Turcois stones, 180 miles SE of the Caspian sea. Lon. 57 45 E, lat. 37 0 N.

Mesen, small seaport of Russia, in the government of Archangel, capital of a district of the same name. It is seated on the river Mesen, on the E coast of the White Sea, 160 miles N of Archangel. Lon. 44 25 E, lat. 65 50 N.

Messkirch, handsome town of Germany in the Circle of Suabia, in the country of Furstenburg, 15 miles N of Uberlingen.

Messa, town of Africa, in the kingdom of Morocco. It is composed of three fortified towns, at a small distance from each other, and a temple, built, (as the inhabitants suppose) with the bones of the whale which swallowed Jonah. It is seated at the foot of Mount Atlas, 168 miles SW of Morocco.

Messene, ancient city of peninsular Greece; on the SW coast of the Peloponnesus. Its site is occupied by the modern village of Maurmati, 25 miles NE from Navarin.

Mesopotamia, post village and NW township of Trumbull county Ohio. Population 1220, 273.

Messina, city and seaport of Sicily, in Val di Demona, with a citadel and several forts. It is five miles in circumference, and the see of an archbishop.—The public buildings and monasteries are numerous and magnificent, and it has four large suburbs. The harbour is one of the safest in the Mediterranean, and has a quay above a mile in length. It has a great trade in silk, oil, fruit, corn, and excellent wine. In 1780, it suffered much by an earthquake; and in 1783, was half destroyed by the same calamity; since which it has been rebuilt, with elegant houses, only two stories high. The inhabitants are estimated at 60,000. It is seated on the strait of Messina, which separates Sicily from Calabria, 110 miles E of Palermo. Lon. 15 50 E, lat. 38 10 N.

Messing, town of Franconia, in the principality of Aichstat, 14 miles NNE of Aichstat.

Mestre, town of Italy, in the Dogado, eight miles NW of Venice.

Mesurata, seaport of Tripoli, and the residence of a governor. Caravans travel hence to Fezzan and other interior parts of Africa, by which they carry on a great trade. It is 100 miles ESE of Tripoli. Lon. 15 10 E, lat. 32 10 N.

Meta, large river of Colombia in New Grenada. It rises near Sta Fe de Bogota, and flows NE by comparative courses 500 miles, falls into the Orinoco at lon. W C, 9 E, and lat. 6 N.

Metaphura, town of the isle of Berneo, in the kingdom of Benjarmissin, 72 miles NE of Benjarmissin, and 100 SE of Negara.

Metcalfeborough, post town Franklin county Tennessee.

Metelen, town of Westphalia, in the principality of Munster, 19 miles NW of Munster.

Metelin, or *Mytilene*, island of the Archipelago, ancient Lesbos, to the N of Scio, and almost at the entrance of the gulf of Adramytti. It is 40 miles long and 24 broad, somewhat mountainous, and has many hot springs. The soil is very good, and the mountains are cool, being covered with wood in many places. It produces good wheat, wine, oil, and the best figs in the Archipelago. It is subject to the Turks, capital Castro. See *Mytelene*.

Methuen, post town Essex county Massachusetts, on the W side of Merrimack river 20 miles NW from Boston. Population 1810, 1181, and in 1820, 1371.

Methwold, town in Norfolk, with a market on Tuesday, 15 miles NW of Thetford, and 86 NNE of London. Lon. 0 40 E, lat. 52 34 N.

Metling, strong town and castle of Germany, in the circle of Austria, and duchy of Carniola, seated on the Kulp, 40 miles SE of Lubach. Lon. 15 10 E, lat. 46 2 N.

Metro, river of Italy, which rises in the territory of the Church, runs into the duchy of Urbino, and falls into the gulf of Venice, near Fano.

Metz, ancient, large, and strong town of France, in the department of Moselle, and late province of Lorrain, at the confluence of the Moselle and Seille, 25 miles NW of Nanci, 37 S of Luxemburg, and 190 NE of Paris. Lon. 6 16 E, lat. 49 7 N.

Meulan, ancient town of France, in the department of Siene and Oise, and late province of the Isle of France, built in the form of an amphitheatre, on the banks of the river Siene, over which are two bridges, 20 miles NW of Paris. Lon. 1 57 E, lat. 49 1 N.

Meurs, town of Germany, in the circle of Westphalia, seated on the Rhine, 15 miles NW of Dusseldorf. Lon. 6 41 E, lat. 51 25 N.

Meurthe, department in France, including part of the late province of Lorrain. It is so called from a river that rises in the department of the Vosges, and watering Lunéville and Nanci, falls into the Moselle. Nanci is the episcopal see of this department.

Meuse, department in France, including the late duchy of Bar. It takes its name from the river Meuse, or Maese. Bar-le-Duc is the capital. See *Mese*.

Mevuri, considerable town of Japan, in the island of Nippon, with a royal palace, where the king sometimes resides. It is seated on a hill at the foot of which are vast fields of wheat and rice, with fine orchards, full of excellent plums.

Mewat, hilly and woody tract of Hindoostan Proper, lying on the SW of Delhi, and on the W of Agra, confining the low country, along the W bank of the Jumna, to a comparatively narrow slip, and extending westward about 130 miles in length. From N to S it is 90 miles.

Mexico. Empire of an immense region of North America.

The country out of which this empire has been formed, is peculiar as respects the features of its geography. It extends from lat. 15 50, to 42 N. The intermediate space embracing every variety of soil, from the most recent alluvion to mountain valleys, or rather plains of near 8000 feet above the contiguous oceans. These elevated plains are again broken and decorated by colossal summits, rising from 12 to upwards of 17,000 feet.

In one of those aerial valleys, stands the city of Mexico, 7,400 feet above the level of the Gulf of Mexico. From this difference of elevation, and from embracing such an extensive range within and without the tropics, Mexico, may be considered as possessing every climate of the earth, and capable of producing every vegetable, necessary to the wants, or the luxuries of human life. Its metallic wealth is no less abundant than its vegetables. From its bowels are extracted many of the most useful, and all the precious metals.

Mexico is perhaps better calculated than any other part of the earth, to form a political community capable of producing within its own limits, all that the necessities, the arts, or elegancies of society can demand.

This empire is subdivided into intendancies or civil governments, consisting of—

The above table was constructed from the data afforded by Humboldt, in his Political Essay on New Spain, Black's Translation, vol. ii, rejecting fractions. There is some confusion and contradiction in the statements of this author, which diminish the authority of his statements; but we may suppose that in the aggregate he was nearly correct. Humboldt's estimate is for 1803, or nearly 20 years past. If the ratio of increase given by this author is adopted, Mexico must now contain 8,481,000 inhabitants. If we compare the two countries of the United States and Mexico, and allow for the former the advantage of better political institutions, and to the latter superior mildness of climate, we may reasonably concede that their respective rates of increase cannot be very widely different. In the middle of 1803, the population of the United States did not materially differ from 6,000,000; now, August, 1822, it amounts, it is probable, to very nearly 11,000,000, but with a small excess above that number. Therefore, if we compare the two masses together by a simple statement of the rules of proportion, Mexico ought now to possess upwards of 10,700,000 inhabitants, and making every allowance for the ravages of war, it is evident, that if the basis of the calculation given by Humboldt is admitted, Mexico must now contain at least, eight and a half million of inhabitants.

About one half the extent and population of Mexico is within the great river system of the Gulf of Mexico. It is in vain to attempt any specification of the Mexican population, as our data is too vague to admit decisive estimates. One circumstance is too striking, however, to be omitted. Mexico has no slaves worth notice in a general statistical survey; that class of its population not amounting, at the utmost, to more than 10,000; or as 1 to 534 of the entire body of the people. The civilized Indians form more than two-fifths of the whole, and are the labouring, productive, and efficient, though not the ruling people.

Few civilized regions of the earth is less known than Mexico. The following account of the manufactures of Mexico is an

extract from an English work, and deserves very serious attention.

The two first of the Mexican manufactures are those of cotton and wool, which are established upon a very large scale in the cities of Queretaro, Puebla, and St Michael, in the immediate neighbourhood of Mexico. The country itself furnishes the cotton and wool in great abundance, it being a mistake of English writers that no part of America can afford the ordinary and staple wool of manufactures. This wool is as easily raised in Mexico as in Lancashire or Lanarkshire. We are now translating from a French author who visited Queretaro, the Manchester of Mexico, sixteen years ago. "I visited Queretaro," he adds "with the greatest interest, that I might inform myself of the extent of the wool and cotton manufactures, and I am therefore enabled to say that, except the principal towns in France and England, Queretaro is a manufacturing town of the first rate and magnitude. The establishments at this period (1803) were divided into factories and workshops, in the latter of which the workmen worked at home at the cost of their masters.—There were cotton factories, as large as any cotton factories in France, and more than 300 workshops. They had worked up that year about two millions worth (in dollars) of woollen cloths, bay, druggets, serges, and cotton stuffs."

The next fabric is that of leather, chiefly in tanning, which is carried to great perfection. It is unnecessary to add that the vast plains afford hides in abundance, and that the bark is equally plentiful. The Mexicans thus produce all the leather for their own consumption, and under general commerce might export much.

Linen and silk factories they have not as yet attained to any extent, but from no other reason than because Spain, whilst they were dependent upon her, discouraged all linen fabrics, and clandestinely destroyed a most flourishing silk growth. Will it be credited by the people in England that about forty years ago silk was nearly as plentiful in Mexico as in Asia and Italy; but that the Mexicans, on rising one morning, found all the mulberry trees in the empire cut down, and of course the silk universally destroyed. It seems that the Cadiz merchants, finding their commerce affected, had procured this secret order of the Viceroy, who had contrived to execute it with the same secrecy. The history of the world does not furnish a more atrocious example of the true spirit of monopoly.

The manufactory next in order is that of tobacco, which is made into segars and supplies all Europe. This produce is very great amounting to nearly ten million of dollars annually. An article of the first importance, when we consider the quanti-

ty consumed in England, and for the supply of which we now depend upon the Americans.

The next manufacture is that of gunpowder, which is equally as considerable as that of tobacco and which, by the way, proves the nugatory nature of the recent proclamations in Europe against supplying the Independents with stores of War.—Gunpowder is as plentiful in Mexico as in England and all America may hereafter be supplied from that quarter.

Soap and soda are the manufactures next in order, both as to quantity and value; soda being particularly abundant, and so cheaply raised and worked as to become an article of vast future export. This soda very far exceeds in quality, any that can be procured from any other quarter, and the French chemists and dyers most sanguinely anticipate that Europe may hereafter draw nearly the whole of her soda from South America, as she imports her potash from the United States.—Oil, tallow, spermaceti, honey and wax, abound likewise in every Intendancy, and must greatly add to the future value of this immense empire to the general commerce of Europe. "In no part of the world," says the French author from whom we are translating, "is there such a variety and abundance of every thing necessary to every want of man as in this kingdom of Mexico; in no country is every thing raised so cheaply."

Besides the manufacture above enumerated, every town almost through this vast empire has its own manufacture, and particularly the large towns in the immediate vicinity of the capital. We have before had occasion to say that the country is in shape like a hat—the high main and table land of Mexico being the crown, and the narrow line of the coast being the rim. In the middle of this crown, or table land, in the city of Mexico half way, or three hundred miles from Vera Cruz the Atlantic port, and the same distance from Acapulco, in the chief port of the Mexican empire on the Pacific Ocean.

The country as we have before said, is divided into fifteen Intendancies, each of which has a subordinate Governor and a Bishop's see and Cathedral of its own. In all these great cities are seated some manufacture peculiar to the places: some of them are celebrated for their pottery, some for their hats, some for their works in jewellery. Indeed, in this latter work the Mexicans so particularly excel, as to rival any manufactory in Europe, not even excepting the establishments in Switzerland, and the workmen of the Palais Royale.

In these interesting particulars the

reader, we doubt not, will be strongly impressed with the same conclusion with ourselves: namely, how infinitely various and important is the produce, and must be the future exports, of Spanish America, in comparison with those of the United States; and thence, by a necessary consequence what a formidable rival the former will be to the latter. And let it not escape our attention, that in the rivalry Great Britain must be the gainer, as her magazine and market are proportionably extended.

See the different Intendancies under their respective heads.

From its position, Mexico has a natural connexion with Asia, Europe, and with every part of North and South America. It is rather deficient in both oceans in good harbours, and from the elevation of the interior country it can never derive much benefit from the few rivers which flow from its mountain valleys. The interior and transport commerce is carried on with mules of burden. Goods to the value of upwards of 18,000,000 of dollars are thus annually transported from the Atlantic coast over the interior table land, whilst the flour, hides and metals descend from the central table land to Vera Cruz. Humboldt has shown, that through the city of Mexico, if a canal was otherwise practicable, it would demand from 330 to 340 locks to unite the two oceans, and concludes rationally that land carriage is alone practicable, for useful commercial purposes, between that great city, and the opposite oceans. The following condensed view of the rivers of the Mexican empire flowing into the Mexican gulph will close this article.

The following are the principal rivers of the Mexican empire which are discharged into the Gulf of Mexico. No stream of any consequence exists on the western coast of Yucatan; and, it is only when reaching the influence of the mountains of Guatemala, and Mexico, that rivers of much magnitude are found flowing from the interior country.

The Sumasinta is discharged into the Bay or Gulf Terminos, which is, indeed, rather an estuary of a number of rivers than a mere bay.

The St. Pedro falls into the Bay of Campeachy, to the west of the Sumainta. Both of these streams rise in the mountainous table land of Gutimala, and are of considerable magnitude, but the interior country, or even the coast, are very imperfectly known.

The Guassacualco is a short but very important stream, falling into the Gulf of Mexico at its extreme southern extension. This stream rises in Oaxaca, interlocking with the source of the Chimalapa, within fifty direct miles from its mouth. This is

one of the channels of communication mentioned by Humboldt, as suitable to unite the waters of the two American oceans. The entire distance from the Gulf of Mexico to the Pacific ocean, by the valleys of the two rivers Chimalapa, and Guassacualco, does not exceed 120 miles, but the nature of the intermediate country is too little known to admit the formation of any rational conclusion upon the practicability of an artificial connexion of the sources of these rivers.

The Alvarado follows the Guassacualco, and, like the Sumasinta, is poured into a spacious bay, the recipient of many streams, precipitated from the high table land of Oaxaca. The Alvarado interlocks with the sources of the Chicometepe, and both roll down steep slopes forming an entire descent of upwards of seven thousand feet. We are now arrived upon the extensive mountain plains of Anahuac, and though within the tropics, in a very temperate climate. The elevations are, however, such as to preclude not only much natural, but extensive improvements of the artificial navigation by water into the interior. In summer the rivers are nearly exhausted by evaporation, and in winter swelled to torrents. The main spine of the chain of Anahuac also approaching so much nearer to the Gulf of Mexico than to the Pacific Ocean, renders the rivers in this region much more abridged in their length, which enter the former, than those falling into the latter recipient.

The Rio Blanco, the north-western branch of the Alvarado, rises at the base of the enormous volcanic summit of Orizaba, the Citlaltepeltl of the Aztecas. It is, I believe, from the Rio Blanco, that the immense quantities of the pumice stone, scattered along the shores of the Mexican gulph, have been floated. I have seen this substance in great abundance upon the coasts of Louisiana, and Texas.

From the Alvarado to the bay of Tampico, in a distance of 300 miles, not one deep indenting of the coast, except Tamiagua, exists. The city of Vera Cruz intervenes, but that entrepot of Mexican commerce, and rendezvous of the Spanish navy, is built upon a low sandy beach, without either a harbour or fresh water. The coast, indeed, entirely round the Gulf Mexico, with very partial exceptions, is low, sandy, or marshy, and in most places very unhealthy in summer and autumn.

The mouth of the Tampico bay is at N lat. 22 20 W, lon. W C 21 15. The Tampico receives the united waters of Rio Tamira, from the intendancy of St. Louis Potosi, and the Tula, or Moctezuema, from the valley of Tenochtitlan, in which the city of Mexico is situated. The Tula, as it is called, in the higher part of its course on

the Moctezuema, is in many respects one of the most remarkable streams of the earth. The valley of Tenochtitlan, from which it flows, cannot be better represented than by a saucer turned bottom upwards; the rim representing the spines of the mountains out of the intervening valley of which it flows. This valley known by its Aztec name of Tenochtitlan, comprises about 1700 square miles, of which one-tenth part is covered by lakes. In its natural state, only one narrow brook, between very high and precipitous banks, issued from this extraordinary valley, and carried its waters into the Tula.

There are beside some smaller, five principal lakes, Zumpango, San Christobal, Chalco, Xochimilco, and Tezcuco. They do not lie upon a level, Zumpango is nearly thirty English feet above that of Tezcuco; and Xochimilco forms a mean between the two former.

The higher lakes are composed of fresh water, but the lowest, that of Tezcuco, is salt. Their propositions and extent, as given by Humboldt, by whom they were surveyed, are Xochimilco and Chalco, fifty square miles; the lake of Tezcuco, eighty square miles; San Christobal, twenty-eight, and Zumpango, ten square miles.

These lakes are supplied by a few small rivers, and innumerable torrents poured down from the adjacent mountain slopes. The Tezcuco receives the rivers of Papotla, Tezcuco, Teotihuacan, and Tepeyacac (Guadaloupé;) and the Zumpango is supplied by the streams of the Pachuca, and Guatitlan, the latter is the largest river of the Mexican valley.

It may be noted as a curious fact, that the two cities of the great river system of the Atlantic, in North America, which occupy the extremes of elevation, New Orleans and Mexico, that both are subject to partial inundation, and both stand indebted to artificial defence for preservation against the encroachments of water. Mexico stands 7,468 feet above New Orleans, and is, nevertheless, of the two cities, most liable to submersion.

In ordinary seasons the quantity of rain which falls at Mexico, according to Humboldt, is nearly five feet in perpendicular depth. This enormous mass of fluid falls also in a short period of time, and before any other outlet existed, except the inadequate channel of the brook (arroyo) Tequisquiac, the lower part of this elevated basin was liable to complete submersion.

The Aztec annals have noticed many instances of those destructive inundations, and some remains still are shown of very extensive works erected during the existence of the Aztec monarchy to obviate their effects. One of the Aztec kings, Ahuitzotl, lost his life in attempting to escape from a

flood of water, he had himself contributed to augment, by some injudicious embankments thrown up to prevent such a catastrophe.

Beside many of lesser magnitude, the Spanish historians mention five ruinous floods, which intervened in a little more than a century after the conquest of Mexico by Cortez. The first in 1553, under the viceroyalty of Don Louis de Velasco, the elder; the second in 1580, during the viceroyalty of Don Martin Enriquez de Alamanza; the third in 1604, under the viceroy Montesclaros; the fourth in 1607, under the viceroy Don Louis Velasco the second; and fifthly, in 1629, whilst the Marquis de Cerhalvo was viceroy.

The peculiar structure of the valley, and such alarming accidents, aroused the attention of the Spaniards, and as early as 1580, galleries or canals of evacuation were suggested, in order to carry the surplus floods through the gorges of the mountains near Nochistongo into the Tula; but no actual operation of that kind was affected until 1607, when the viceroy, the Marquis Salinas, employed an able engineer, Enrico Martinez, supposed to be a Dutchman, to make, in conjunction with some other mathematicians, an exact survey of the valley. This survey led to the commencement of the truly stupendous hydraulic work, the Desague (drain) of Huehuetoca.

Like all great national undertakings the advance of the Desague was slow and interrupted. It was commenced on the 28th of November, 1607, by the hand of the viceroy in presence of the Audiencia. It was in the first instance only a deep gallery upwards of four miles in length, nearly fourteen feet in depth, and eleven and a half feet wide. The water first entered it on the 17th of September, 1608, in less than ten months from the original undertaking. Could we abstract our minds from the melancholy fact that this stupendous execution was effected by the forced labour of the Indians, we must admire a work, which even now, in the most populous nations, could not be considered other than extraordinary. Our admiration is enhanced also, by the additional labour performed in the same time, to carry the waters from the northern opening of the Desague to the Rio Tula. A dike upwards of five miles in length was cut to effect the latter object, and led the superabundant waters of the valley of Tenochtitlan towards the Gulf of Mexico.

A regular and detailed history of this singular work, is given by Humboldt in his description of the Intendancy of Mexico, and forms one of the most instructive parts of his Political Essay on New Spain. From this account we find that the Desague, though still unfinished, has eventuated in an

enormous open cut (*tajo abierto*) through the mountains. "The Desague," says Humboldt, "in its actual state, is undoubtedly one of the most gigantic hydraulical operations ever executed by man (from 262, to 328 feet wide, and from 161, to 196 feet deep.) We look upon it with a species of admiration, particularly when we consider the nature of the ground, and the enormous length, breadth, and depth of the aperture. If this cut was filled with water ten metres (32.8 English feet.) the largest vessels of war could pass through the range of mountains which bound the plain of Mexico to the northeast."

From its commencement within the valley to its discharge (*salto*.) the Desague is 67,535 feet (12.8 miles) in length, and in one point 196 feet deep, with a mean width at top of about 320 feet. The head of the Desague, in the channel of the Rio Gratitlan, is $10\frac{3}{4}$ varas, or $29\frac{1}{2}$ feet above, and below the Salto del Rio, or discharge, it is $107\frac{1}{2}$ varas, or 295 feet below the level of the lake of Tezanco; having an entire fall of $324\frac{1}{2}$ feet. The expense at various periods, nearly six million of dollars. To those who wish information more in detail than is in my power to give in this place, upon the topography of this remarkable region, will do well to read the third book of the Political Essay: the reading of this valuable document will explain the cause of the unnavigable nature of the Mexican rivers.

The Altamira, or northern branch of the river of Tampico, rises on the arid elevated plains of Zacatecas, and of San Louis Potosi, more than two degrees of latitude north of the valley of Tenochtitlan. Near the sources of the latter river commences the North American desert, which will be more amply noticed in the sequel.

At the bar of Tamigua, fifty or sixty miles south-east from the mouth of the Tampico river, commences a range of long sandy islands, which extend parallel to the continent as far as the mouth of the Trinity. The general range of the coast from the Guasacualco to the Tampico, distant from each other upwards of 400 miles, is from south-east to north-west; but at the latter place turns to nearly north, and maintains that direction through nearly seven degrees of latitude, or between four and five hundred miles.

Having the parched surface of Zacatecas in the rear, the space of 250 miles from the Tampico to Rio Grande, affords no rivers of any particular consequence. St. Ander, and San Fernando, are two mountain streams, which rise in Zacatecas and New Biscay, and flowing eastward carry comparatively little water into the Gulf of Mexico. The different structure of the two countries may be conceived from the fact, that those two rivers have as great

length of course as have most of those of the Atlantic slope.

At North lat. 25 55 West, lon. W C 20 39, the Rio Grande del Norte falls into the Gulf of Mexico. This is the first great river flowing from the Spanish provinces into the Gulf of Mexico. The Rio Grande, according to most of our maps of that part of America, rises at North lat. 41 30, thirty-four degrees west from Washington city; its mouth, as determined by Humboldt, is at North lat. 25 55, West lon. or Paris 99 51; it flows through more than fifteen degrees of latitude, and thirteen degrees and thirty minutes of longitude, having a comparative course of upwards of fourteen hundred miles, with a general course of nearly south-east.

The extent of surface drained by this river, or the quantity of water it yields at its mouth, bears very inadequate proportions to its great length, which, on a comparative scale, would be only exceeded in North America by the Missouri and lower Mississippi united, by the St. Lawrence, Saskatchewan, and Unjiga; it exceeds the length of both the Colorado and Columbia, though it is probable that either of the two latter streams carries to their respective recipients more than ten times the mass of water discharged by Rio Grande. From its source North lat. 41 30, to the mouth of its first considerable branch, the Rio Conchos, from New Biscay, North lat. 30 29, or above ten degrees of latitude, it flows in a very narrow valley, not averaging one hundred miles wide. Below the mouth of the Conchos, the river gradually turns to the east and north-east; here the basin is the widest, being from north east to south-west above four hundred miles. Within this sweep the largest tributary of the Rio Grande, the Rio Puerco, enters from the north, and some distance below its junction the main stream again resumes its south-east course, which it pursues to its final discharge into the Gulf of Mexico. The Rio Grande drains an area of about 150,000 square miles.

As we are now approaching the United States, and as the phenomena of the climate, of the regions watered by the Rio Grande, are necessary elements to determine many problems in the meteorological analysis of the seasons of the former, I here beg leave to quote the observations of Humboldt upon this river and the country it drains.

"It is sufficiently remarkable," says that author, "to see that after the lapse of two centuries of colonization, the province of New Mexico does not yet join the intendancy of New Biscay. The two provinces are separated by a desert; this desert extends from the Passo del Norte towards the town of Albuquerque, North lat. 35 40.

Before 1680, in which year there was a general revolt among the Indians of New Mexico, this extent of uncultivated and uninhabited country was much less considerable than it is now. There were then 3 villages, San Pascual, Semillette, and Socorro, which were situated between the marsh of Muerto, and the town of Santa Fe; Bishop Tamaron perceived their ruins in 1760, and he found apricots growing wild in the fields, an indication of the former cultivation of the country.

"The desert of the Muerto, is a plain thirty leagues (near 90 miles) in length, destitute of water. The whole of this country is, in general, of an alarming degree of aridity; for the mountains *de los Mansos*, situated to the east of the road from Durango to Santa Fe, do not give rise to a single brook. Notwithstanding the mildness of the climate, and the progress of industry, a great part of this country, as well as Old California, and several districts of New Biscay, and of the intendancy of Guadalupe, will never admit of any considerable population.

"New Mexico, though under the same latitude with Syria and central Persia, has a remarkable cold climate. It freezes there in the middle of May. Near Santa Fe, and a little further north, under the parallel of the Morea, the Rio del Norte is sometimes covered, for a succession of several years, with ice thick enough to admit the passage of horses and carriages. We are ignorant of the elevation of the soil of the province of New Mexico; but I do not believe, that under the 37 of latitude, the bed of the river is more than seven or eight hundred metres (2296 or 2624 feet) of elevation, above the elevation of the Ocean. The mountains which bound the valley of the Rio del Norte, and even those, at the foot of which the village of Taos is situated, lose their snow towards the beginning of June.

"The great river of the north, rises in the Sierra Verd, which is the point of separation between the streams which flow into the Gulf of Mexico, and those which flow into the South sea. It has its periodical rises, like the Orinoco, the Mississippi, and a great number of rivers of both continents. The waters of the Rio del Norte begin to swell in the month of April, they are at their height in the beginning of May, and they fall towards the end of June. The inhabitants can only ford the river on horses of an extraordinary size, during the drought of summer, when the strength of the current is greatly diminished.

"The water of the Rio del Norte, like that of the Orinoco, and all the great rivers of South America, is extremely muddy. In New Biscay they consider a small river called Rio Puerco, the mouth of which

lies south from the town of Albuquerque, near Valentin, as the cause of this phenomenon; but M. Tamaron observed that its waters were muddy far above Santa Fe, and the town of Taos. The inhabitants of the Passo del Norte, have preserved the recollection of a very extraordinary event which took place in 1752. The whole bed of the river became dry all of a sudden for more than thirty leagues above, and twenty leagues below the Passo; and the water of the river precipitated itself into a newly formed chasm, and only made its reappearance near the Presidio de San Eleazar; this loss of the Rio del Norte remained for a considerable time. The fine plains which surround the Passo, and which are intersected with small canals of irrigation, remained without water; and the inhabitants dug wells in the sand, with which the bed of the river was filled. At length, after the lapse of several weeks, the water resumed its ancient course, no doubt because the chasm, and subterraneous conductors were filled up."

The Rio Grande del Norte is the true American Nile, and except flowing in an opposite direction, the two rivers have very strong traits of resemblance.

In the angle between the Rio Grande and Red river, rises a series of streams flowing into the Gulf of Mexico. The first of these from the Rio Grande is the Rio Nueces, or Walnut river, rising in the plains of Texas, at North lat. 31, West lon. W C 23 30, flowing parallel to the Rio Grande 250 miles it falls into the Laguna Madre, North lat. 27 20, West lon. W C 21, draining about 15 000 square miles.

The shores of the Gulf of Mexico, north-east from the Rio Grande, is as remarkable for the abundance, as is that south from that stream for the scarcity of its rivers. The Nueces is followed by the united streams of the St. Marco and Guadalupe. It is probable from the phenomena of the rivers of these regions that the substrata are calcareous. The circumstance quoted from Humboldt, of the sinking of the waters of the Rio Grande, almost superinduces the supposition of a calcareous base. The St. Marks (San Marco) rises in the mountains of St. Saba, and is remarkable for the number of excessively large fountains, another almost unerring mark of a calcareous formation. It may seem incredible, but it is nevertheless true, that few parts of this continent are more imperfectly known, than the angle between Rio Grande and Red river west and north-west from the Sabine. The names of the rivers, as they follow in succession, were communicated to me by a number of persons who had travelled the country, and particularly by Mr. Davenport, who resided many years at Nacogdoches, and by a French gentle-

man of the name of Laforest, who also resided a considerable time in Texas. Neither the shores or interior have ever been surveyed, or even visited, by any scientific traveller. The sources and courses of the rivers are very imperfectly known; their mere relative names was all I could procure beyond the extent of my own sphere of observation, which was limited by the waters of the Sabine, which I intersected at North lat. 32.

It is well known, however, that the rivers from the Rio Grande to Missouri inclusive, have gained from the configuration of the intermediate country a very singular corresponding curve. These curves give to a map of the rivers of Texas, Arkansas, and Missouri, a regularity which appears artificial. It is from such a structure that the Colorado of the Gulf of Mexico presents so singular an aspect. With a comparative length of 700 miles, the basin of that river does not exceed sixty miles in mean width. The basins of most rivers make more or less approach to the form of an ellipse, and the difference between the greatest length and greatest breadth seldom amount to so great a disproportion as three to one; in the case of the Colorado, the difference is double the ordinary scale of comparison.

That river rises at North lat. 34, West lon. W C 23, and flowing south east by east 500 miles, turns 150 to the south-east, and about a similar distance to the south falls into the Gulf of Mexico, at North lat. 29, West lon. W C 19 40. This stream has its regular spring and summer inundations similar to the Rio Grande, and about the same period. The parched and open nature of the country from which they both flow, causes an excessive depression in the latter end of summer and in autumn. Indeed the overwhelming rains that sometimes deluge, and the long droughts which occasionally parch the interior of Texas, and which extend their effects into Louisiana, Arkansas, and Missouri, are amongst the most singular phenomena of physical geography. Whilst I was in Louisiana there intervened near three years, I believe, 1800, 1801, and 1802, without rain at St. Antonio de Behar, and over an immense extent of the interior regions. During the two first years of that series the Mississippi did not overflow its banks.

The basin of the Brassos a Dios, follows that of the Colorado, and partakes of a similar structure. The sources of the latter are, however, in the mountains of San Saba, upwards of 300 miles east of those of the former. The Brassos rises at North lat. 33, West lon. W C 23, and flowing nearly parallel to the Colorado falls into the Gulf of Mexico after a comparative course of 400 miles, with also a very nar-

row basin of less than fifty miles mean width.

The Trinity is the last river of Texas beyond the Sabine. These two streams rise in the same plain south of Red river, at about North lat. 32 30, and both flow nearly parallel to each other, with a general course to the south, curving to the eastward by a semi-elliptical sweep; each having a comparative course of about 300 miles.

We may turn and cast a cursory retrospective glance upon the rivers of Texas. I may observe that by the name of Texas, is designated all the country between Louisiana and New Mexico, and between the boundary of the United States, the Rio Grande, and Gulf of Mexico.

Though the coast of Texas is amply indented with bays, many of which are of extent and depth to admit vessels of any draught, the rivers are extremely shallow, and, except during floods, unnavigable. No large falls, or even cataracts, are known to exist. The very slight tides in the Gulf of Mexico, gives little aid to the commercial facilities in the confluent rivers.

Similar to the Atlantic-coast, south-west from New York, that of the Gulf of Mexico is every where low, and either sandy or marshy. This gives a peculiar character to the rivers of both, which distinguish them from such as flow from a rocky or bold shore. Bars of sand or mud interrupt the navigation, more or less, of all the rivers of the world, but in a high degree those whose egress to their recipients are made through shores having but little declination above the water level.

Mexico, intendency of the empire of Mexico; bounded SW by the Pacific Ocean; W by Valladolid and Guanajuato; N by Potosi; NE by Vera Cruz; and SE, and E by Puebla. Length 350; mean width about 130 miles; area 45,400 square miles. It extends from lat. 16 34 to 21 57, N. More than two thirds of the intendency of Mexico are mountainous, in which there are immense plains elevated from 6,560, to 7,550 feet above the level of the ocean. From Chalco, to Queretaro, are almost uninterrupted plains of 150 miles in length, and from 25 to 30 miles wide, on the low Pacific border the climate is sultry and unhealthy. Near the gigantic summits of Popocatepetl, and Iztaccihuatl, the highest peak of the intendency of Mexico, the Nevado de Toluca, is 15,156 feet above the level of the ocean. The particular valley of Mexico, or Tenochtitlan, surrounded by the mountains of Anahuac, is one of the most singular features of our globe. Its form is oval; length about 55, and breadth

38; area about 1,700 square miles of which one tenth is covered by water. Its circumference 200 miles. The surrounding Cordillera, or porphyritic rim has a mean height of 9,840 feet. In this extraordinary vale or basin are five lakes, near one of which the city of Mexico is situated. See *article Mexican empire, and city of Mexico*.

From the outside of the basin the water flows in every direction towards the Atlantic and Pacific Oceans, but from the basin itself, only one outlet exists, carrying the water into the Tula or Moctezuma river. And what is peculiarly remarkable, this outlet is in a great degree artificial. For the rivers of this intendancy, and for those of the Mexican empire in general, which enter the gulf of Mexico. See *Empire of Mexico*. The sources of the Rio Grande de Santiago rise on the western slopes of the mountains of Anahuac, and cannot be considered a stream of the intendancy of Mexico. The river of Xacatlutla rises near Cuernavaca, and drains the SW part of the intendancy. It is a region which, though exposed to excessive annual rains, the rivers are few in number and comparatively small.

In a region of such difference of level, and such excessive difference of moisture the seasons must also offer almost every change of temperature. The high plains of Anahuac are as remarkable for the purity of the air, as are those of the Pacific coast, for their insalubrity. The two climates are clearly distinguished by the inhabitants. The cities on the elevated table land are called, *ciudades, de tierra fria*, or cities of the cold region, whilst those near the coast, are designated, *ciudades de tierra caliente*, or cities of the hot region. Its most important mines are, La Veta Biscaino de Real del Monte, Zimopan, and Tehuilitopēc.

The cities of the intendancy of Mexico, are Mexico, Tezcuco, Cuyoacan, Tacubaya, Tucuba, Cuernavaca, Chilpanzinco, Tasco, Acapulco, Zacatlula, Lerma, Toluca, Pachuca, Caderieta, San Juan del Rio, and Querataro.

Mexico, city of, capital of the Intendancy of the same name and of the whole empire, is situated at lat. 19 26 N, Lon. W C 22 5 W, on or near the west shore of the lake Tezcuco, and in the central part of the valley of Tenochtitlan, and also nearly mid-distance between Vera Cruz and Acapulco. The site of Mexico is elevated 7470 feet above the ocean level. The name of this city, and of the country is a subject of some doubtful speculation, there is good reason to believe the name, however, to be derived from Mezitli, or Huiztilopochtli,

the Mexican god of war. The valley was called Tenochtitlan from Tenochques a national appellative of the Aztecs. It was founded according to the Aztec historians, in 1321, precisely two centuries before the Spanish conquest. The ancient city, was divided into four quarters, Teopan or Xochimilco, Atzacualco, Moyotla, and Creeppopan; and the old limits are preserved in St. Paul, St. Sebastian, St. John, and St. Mary. The present streets have for the most part the same direction with the old ones, running from north to south, and from east to west. But what gives the new city a peculiar and distinctive character, is, that it is situated entirely on the continent, between the extremities of the two lakes of Tezcuco, and Xochimilco, and that it only receives by navigable canals the fresh water of the Xochimilco. The ancient city was placed on an alluvial plain, or rather morass, which has been by the mere operations of nature in five centuries, raised to a considerable elevation, and the shores of the lakes restricted. The surface of lake Tezcuco is 7468 feet above the level of the ocean, and its waters are salt; lake Xochimilco is higher, and composed of fresh water. Before, and for more than a century after the Spanish conquest, no city of the world was so subject to destructive inundations as Mexico. This casualty has been diminished in its effects and occurrence by increased evaporation arising from the destruction of the adjacent forests, and more efficaciously by the great drain *Desague*. See *Mexican Empire*. "Mexico is undoubtedly one of the finest cities ever built by Europeans in either hemisphere. With the exception of Petersburg, Berlin, Philadelphia, and some quarters of Westminster, there does not exist a city of the same extent, which can be compared to the capital of New Spain, for the uniform level of the ground on which it stands, for the regularity and breadth of the streets, and the extent of the public places. The architecture is generally of a very pure style, and there are even edifices of very beautiful structure. The exterior of the houses is not loaded with ornaments. Two sorts of hewn stone, the porous amygdoloid, called tetzouthl, and especially a porphyry of vitreous feldspath, without quartz, give to the Mexican buildings an air of solidity, and sometimes even magnificence. There are none of those wooden balconies, and galleries to be seen, which so much disfigure all other cities built by Europeans in both Indies. The balustrades and gates are all of Biscay iron, ornamented with bronze, and the houses instead of roofs, have terraces, like those in Italy and other southern countries."

The edifice, destined to the school of

mines for which the richest individuals of the country furnished a sum of more than three millions of francs, 554,112 dollars, would adorn the principal places of Paris, or London. Two great palaces, or hotels have been constructed by Mexican artists, pupils of the Academy of Fine Arts of the capital. One of these palaces in the Quarter della Traspiana, exhibits in the interior of the court a very beautiful oval peristyle of coupled columns. The traveller justly admires a vast circumference paved with porphyry flags, and enclosed with an iron railing, richly ornamented with bronze containing an equestrian statue of king Charles IV. placed on a pedestal of Mexican marble, in the midst of the Plazo Mayor of Mexico, opposite the cathedral and the Viceroy's palace. It is much less, however, from the grandeur and beauty of the monuments, than from the breadth and straightness of the streets; and much less from its edifices, than from its uniform regularity and from its extent and position that the city of Mexico attracts the admiration of Europeans. "From a singular coincidence of circumstances," says Humboldt, "I have seen successively, within a very short space of time, Lima, Mexico, Philadelphia, Washington, Paris, Rome, Naples, and the largest cities of Germany. By comparing together impressions which follow in rapid succession, we are enabled to rectify any opinion, which we may have too easily adopted. Notwithstanding such unavoidable comparisons, of which several, one would think, must have proved disadvantageous for the capital of Mexico, it has left in me a recollection of grandeur, which I principally attribute to the majestic character of its situation, and to the surrounding scenery.

In fact, nothing can present a more rich and varied appearance than the valley, when, in a fine summer morning, the sky without a cloud, and of that deep azure, which is peculiar to the dry and rarified air of high mountains, we transport ourselves to the top of one of the towers of the cathedral of Mexico, or ascend the hill of Chapultepec. A beautiful vegetation surrounds this hill. Old cypress trunks of more than from 49 to 52 feet in circumference raise their naked heads above those of the schinus, which resemble in their appearance, the weeping willows of the East. From the centre of this solitude, the summit of the porphyritic rock of Chapultepec, the eye sweeps over a vast plain of carefully cultivated fields, which extend to the very foot of the colossal mountains covered with eternal snow. The city appears as if washed by the waters of the lake Texcoco, whose basin, surrounded with villages and hamlets, brings to mind the

most beautiful lakes of the mountains of Switzerland. Large avenues of elms and poplars, lead in every direction to the capital; and two aqueducts, constructed over arches of very great elevation, cross the plain, and exhibit an appearance equally agreeable and interesting. The magnificent convent of Nuestra Señora de Guadalupe appears joined to the mountains of Tepeyacac, among ravines, which shelter a few dates, and young Yucca trees. Towards the south, the whole tract between St. Angel, Tacabaya, and San Augustine de las Cuevas, appears an immense garden of orange, peach, apple, cherry and other European fruit trees. This beautiful vegetation forms a singular contrast with the wild appearance of the naked mountains which enclose the valley, among which, the famous volcanoes of La Puebla, Popocatepetl, and Iztaccihuatl, are the most distinguished. The first of these forms an enormous cone, of which the crater, continually inflamed and throwing up smoke and ashes, opens in the midst of eternal snow.

The police of Mexico is good, the Streets are wide, clean and well lighted. The city is supplied with fresh water from two sources, one on Chapultepec hill, and the other near the mountain which separates the valley of Tenochtitlan from that of Lerma, and Toluca. To convey this water, two great aqueducts have been constructed. The water of Chapultepec, enters the city at the Salto del Agua, by an aqueduct of 10,826 feet; and that of Santa Fe, is brought along Alameda, and terminates near la Traspiana, at the bridge de la Marescala by an aqueduct of 33,464 feet, or upwards of six and one third miles. The latter stream is most pure. What is very remarkable, the ancient city was supplied in the same manner, and by aqueducts not less massive or lengthy, than those erected by the Spaniards.

In its actual state Mexico is no doubt considerably the most extensive, and best populated city of either America. Its existing population, is, however, difficult to fix with any precision, but must from all concurrent testimony exceed 150,000.

Mexico, gulf of, inland sea of North America; having the Mexican provinces SE, SW, and NW, the United States N; and NE; and Cuba E. It extends from lat. 18 to 31 20 N; and from lon. W C 4 to 21 W. From the mouth of the Alvarado, to that of the Apalachicola, in a NE and SW direction upwards of 1,000 miles; its mean width from SE to NW, about 600 miles; superficial area exceeding 600,000 square miles. The gulf

of Mexico is connected with the Caribbean sea by the channel of Cuba, and with the Atlantic Ocean by the Florida stream. The current generated by the trade winds, and by the rotation of the earth on its axis, is carried into the Mexican gulf by the Cuba Channel and discharged by the Florida stream; the gulf being an immense reservoir.

Mexico, township of Oxford county Maine. Population 1820, 148.

Mexico, township of Oswego county New York, on Mexico bay of lake Ontario, 15 miles E from Oswego. Population 1820, 1590.

Mexico, post town of Mifflin county Pennsylvania, on the left side of the West branch of Susquehannah, 12 miles above Mellerstown, and 15 below Lewis-town.

Meyenberg, town of Upper Saxony, in the marche of Pregnitz, 60 miles NNW of Berlin.

Meyensfeldt, town in the country of the Grisons, seated on the Rhine, in a pleasant country, fertile in excellent wine, 15 miles NE of Coire. Lon. 9 36 E, lat. 47 2 N.

Mezieres, town of France, in the department of Ardennes and late province of Champagne, with a citadel, seated on the Meuse, 12 miles NW of Sedan, and 127 NE of Paris. Lon. 4 48 E, lat. 49 46 N.

Mezen, river of European Russia, rising between the Vyezegda, and the Petchora and flowing, parallel to the Dwina into the White Sea.

Mezin, town of France, in the department of Lot and Garonne, and late province of Guienne; seated in a country that abounds in wheat; with vines, from which they principally make brandy; and with the cork-tree, which they sell both in its natural state, and in corks. It is 9 miles NW of Condom.

Mia, or *Mijah*, large town of Japan, seated on the S coast of the Isle of Nippon, with a fortified palace. Lon. 135 40 E, lat. 35 50 N.

Miami river, river of Ohio, rising in Hardin county, interlocking with the headwaters of the Scioto. It runs in a SW direction, above 100 miles across the western borders of Logan, and through Shelby, Miami, Montgomery, Butler and Hamilton counties, into the Ohio river, exactly in the SW corner of the state, by a mouth 200 yards wide. Bordering upon this river, are some of the finest arable lands in the state. But its navigation is not easy, on account of the rapidity of its current; it is, however, navigated to a limited extent, 75 miles, and some of its waters approach so near those of the Au Glaize, a southern

branch of the Maumee, that a communication is effected between them by a portage of five miles. Its mouth is in N lat. 39 4, and W lon. W C 70 50.

Miami, of the Lake. See *Maumee*.

Miami, county of Ohio, bounded on the N by Shelby, E by the counties of Champaign and Clark, S by Montgomery, and W by Dark county. It is 21 miles in extent from N to S, by 20 from E to W, and contains about 410 square miles. Troy the county seat, and Piqua are the principal towns. The principal waters are the Miami river, which runs across it from N to S. the Southwest branch, and Spring, Honey, and Lost creeks. Soil fertile. Staples grain and flour.

Michigan, large lake of North America, whose NE extremity communicates with the NW end of Lake Huron, by the strait of Michilimackinack. It is situated wholly within the limits of the United States. It is about 340 miles in length, including the straits of Michilimackinack. Its width varies from 20 to 70 miles. The area covered by this lake amounts to about 15,000 square miles, Green Bay is connected with it to the NW, and lake Huron NE. It is navigable for vessels drawing 12 feet water through the straits of Michilimackinack, and within the body of the lake for those of the largest class.

Michigan Territory,—This expanse is composed of two parts naturally divided or separated. The first is formed by the peninsula between the Lakes Erie, Huron, and Michigan; the second from

the immense former northwest territory between the river Mississippi, North lat. 49, the river Rain, the Lakes Superior, Huron, Michigan, and the northern limits of the state of Illinois, on N lat. 42 30.

The second part is merely annexed to the first for temporary purposes of civil government.

Area, 140 000 square miles, = 89,600,000 acres; which if added to the superficial contents of the peninsular part quotes 174,000 square miles, or 111,360,000 acres.

Extreme south of the trans-peninsular section, North lat. 42 30.

Extreme north, North lat. 49.
It is about 650 miles from the north-east angle of the state of Illinois, to the

north-west angle of the Michigan territory on Red river. Its breadth is very irregular, but averages about 200 miles.

Of this immense region much remains unknown ; and of those parts which have been explored, our information is generally imperfect. The peninsular section, though much more correctly delineated on our maps, than the more remote, and more inaccessible parts to the north-west, remains still extremely defective in its representation. It may seem strange, but it is nevertheless a fact that, I was myself the first to publish the names and positions of several of the most important rivers in the very environs of the city of Detroit.

In general description little will suffice on the whole of this region. It is less variegated than any section of the United States of equal extent. The surface is in a great measure flat, or gently rolling or waving. The peninsula contains some prairie, but is in much the greater part covered with a dense forest. On the trans-peninsular division, the prairies are more expansive, and the forests, where they do occur, composed of more humble and less numerous specific material. The soil of the peninsula is, perhaps, in proportion to extent, equal if not superior, to any equal continuous area in the United States, the state of Illinois excepted.

In point of climate, it must be obvious that very sensible extremes must be felt in a country stretching over $6\frac{1}{2}$ degrees to latitude, but these extremes are very little affected in Michigan by inequality of surface. On some maps mountains are drawn near the sources of Ouisconsin and Fox rivers, where no such elevations exist. The country is there hilly, but by no means mountainous, and towards either the lakes or Mississippi river becomes comparatively level. It is needless, however, to amplify on objects of remote importance, and concerning which our information is at once vague and of doubtful authority ; we will therefore confine our observations respecting Michigan more particularly to the part contained in the peninsula.

I may merely observe, that this point of land is generally level in its interior, with a sloping border towards the circumscribing lakes and river. Its superstructure is in every respect analogous to the northern parts of Ohio, and Indiana. A prolongation of the table land mentioned in my general view of those states, passes through Michigan, and reaches to the straits of Michilimackinack. This plain is no doubt underlaid with the same secondary base, reaching

from Ohio river, and a similar superstratum is found in Michigan, which spreads over the schist of Ohio, Indiana, and Illinois.

Almost all the rivers of Michigan are precipitated over ledges of either limestone or sandstone rock, a few miles before joining their respective recipients. Above these falls the country gradually becomes flat and marshy ; below, it is dry, sloping, and very productive. In one respect, the features of Michigan very essentially differ from those of Ohio and Indiana. In the two latter sections, the mouths of the confluent of Ohio river surrounded by hills, whose true character I have drawn ; whilst in the former, the approach to the discharge of its streams is made down a very gradual and but little broken plain. In one instance the original inclined plain was gradually cut into ravines by the Ohio and other streams ; in the second instance, the original plain was simply refracted, by the formation of a sloping border, whose inclination was greater than the interior and remaining fragment of the primitive level.

It has been seen that Lake Michigan was only elevated above the Atlantic tides about 600 feet. From any data yet procured no part of the peninsula can be elevated above that lake, two hundred feet, or eight hundred feet above the ocean.

The straits of St. Mary, uniting Lake Huron with Lake Superior, has but little current except at the rapid of St. Mary, a distance of two or three miles. Fifty feet is as much as can be allowed for all the depression from Lake Superior to Huron, giving to the former an elevation above the Atlantic tides of 650 feet.

It will at once be seen from the elements given, that a Canadian sea, is a species of valley, reaching far into the interior of the continent, with an elevation at its utmost extremity not so great by 150 feet as the ground on which stands the city of Pittsburg.

I mention these striking facts in this place, as they present, in a striking manner, the peculiar structure of the widely extended connexion between the two great basins of Mississippi and St. Lawrence ; and in order to introduce some brief observations on a phenomenon which has excited considerably surprise and observation. It has been found, that in receding from the central parts, of New York, and even Pennsylvania, that though advancing into a higher latitude, when proceeding to the margins of Lakes Erie and Ontario, that the seasons became more mild. The quantum of the change, as in all similar cases, has been

no doubt very much exaggerated; but that such an effect is actually perceptible admits of no serious doubt. The cause remains to be explained. We have already repeatedly adverted to the elevated region which protrudes from New York and Pennsylvania, into Ohio, and which gradually depresses advancing south-west, until it finally subsides into a level table land, in the north-west part of Ohio, and north-east part of Indiana. In the region skirting the south-eastern side of Lake Erie, we have found the summit level of the ridge in question about 1200 feet in height, whilst that of Lake Erie was not half so much.

Pittsburgh is upwards of 200 feet above Detroit, and about on a level with the table land of Michigan. It ought not therefore to excite surprise, that places elevated from 500 to 800 feet above others, should be more exposed to the action of frost.

The peach tree flourishes on the south shore of Ontario, whilst it languishes a degree of latitude more southwardly for the very reasons I have assigned. In 1818, in September, travelled from Buffalo to Albany, and found indications of approaching winter, in proportion to my recession from the level shores of Erie, an entrance on the hilly and broken tracts contained in Seneca, Cayuga, Onondago, Cortland, Madison, Chenango, Otsego, Schoharie, and Green counties. In my previous route from Buffalo to Detroit, the contrary aspect was very visible, though at a less advanced season. The time of harvest is more than a week earlier at Detroit than at Buffalo, though the difference of latitude is only about 30'. In the central and elevated parts of New York, due east from Detroit, the seasons differ in length near a month. Not as has been supposed, from relative east and west position, but from relative height, and proximity to water.

It may not be irrelevant, to observe, that causes remote and doubtful, ought never to be resorted to, when those near and obvious, will satisfactorily account for the phenomena under examination. The effects of the trade winds have been by Volney and some others, stated to exist far beyond their possible actual sphere of influence. It demands but a very limited knowledge of the physical and chemical properties of air, to enable the mind to conceive, that every thing else equal, the cold mass of atmospheric air in the higher parts of the Mississippi basin, was more liable from its superior weight, to extend its effects towards the lower parts of the basin, than for the heated and buoyant mass at that lower

part to not only resist, but actually force a heavier body to recede to the higher and superior section.

The extent of the counties of Michigan is too vague to admit any relative estimate. The inhabited parts of this territory are; a strip along the south-eastern side of the peninsula, extending from the mouth of the Maumee, to the discharge of St. Clair river, from Lake Huron about 140 miles, and reaching inland about 30 miles; with an area 4,200 square miles, and with 7125 inhabitants, not quite an average of $1\frac{1}{4}$ to the square mile. At an interval of 250 miles, we find 819 inhabitants at and around Michilimackinack; and 150 miles still farther, 952 in Brown county, embracing the region adjacent to Green Bay, and Fox river. The whole inhabited and cultivated extent of the Michigan territory may be estimated at about 5000 square miles.

The progressive population of this fine, and naturally favoured country, has been, from various causes, extremely slow. It is within the range of reasonable anticipation, that the completion of the New York western canal will produce a flood of emigration to Michigan, and to the north-west part of the state of Ohio. It is hardly within the powers of imagination to conceive a place better adapted for inland commerce than is the city of Detroit; nor a finer country for all the purposes of agriculture suitable to its climate, than is the peninsula of Michigan.

Detroit stands at lat. 42 25 north, and lon. W C 5 50 west. The site is a gently sloping bank, rising 30 or 40 feet, into the centre of the city, and thence spreading into an extensive plain in its rear. The town is yet small, but has an active and prosperous aspect. It contained in 1820, 1422 inhabitants.

Michilimackinaw, straits and island of, between lakes Michigan and Huron. The straits extend about 40 miles in length, but with very unequal breadth. A gentle current sets through it from Michigan into Huron, which at the narrows near the island where the strait is restricted to about 4 miles wide, is most sensibly felt. The island is about 7 miles in circumference. See *Michilimackinaw County*.

Michilimackinaw, county of Michigan territory, embracing the foregoing island and adjacent shores. The principal settlement is on the island, which contains a court-house, jail and about 100 houses. The island rises to some considerable height in many places, one of which hills is elevated 300 feet above the level of the lake. The name of this island is said to be derived from Michi. Mackinaw, or Great Turtle from its form. The town is during summer a place of very considerable resort, being a complete thoroughfare between the lower and higher parts of the Canadian sea. It has a regular custom house, and is a port of entry.

Middlebrook, post village, Augusta county, Virginia, 10 miles SW from Staunton.

Middlebrook, post office, Montgomery

county, Maryland, on Seneca creek, 35 miles NW from Washington City.

Middleburg, strong city of Holland, capital of the island of Walcheren, and of all Zealand. The squares, streets, and public buildings are magnificent; particularly the townhouse (formerly a celebrated abbey) which is decorated with the statues of the ancient counts and countesses of Holland. The inhabitants are computed at 30,000. The harbour is commodious, and has a communication with Flushing by a canal, which will bear the largest vessels. It is 30 miles NNW of Ghent, and 72 SW of Amsterdam. Lon. 3 37 E, lat. 51 29 N.

Middleburg, town of the Netherlands, in Flanders, five miles SE of Sluys.

Middleburg, township and post village, Schoharie county, New York, 10 miles S from Schoharie. Population in 1820, 3782.

Middleburg, Somerset county, New Jersey. See *Millstone*.

Middleburg, post village, Frederick county, Maryland, 20 miles NE from Frederick.

Middleburg, township of Cuyahoga county, Ohio, containing 157 inhabitants in 1820.

Middleburg, post village, Loudon county, Virginia, on Goose creek, 12 miles SSW from Leesburg, and 45 NW by W from Alexandria.

Middleburg, post village, Nelson county, Kentucky.

Middleburg, post town and seat of justice, in Addison county, Vermont, 33 miles NNW from Rutland, and 35 SSE from Burlington. It stands on the right bank of Otter creek, near the falls, 13 miles above Vergennes. It is a very manufacturing town, the operations of which are facilitated by the water power afforded by the falls of Otter. There are 2 cotton factories, one for nails, a number of grist and saw mills, and a machine for sawing marble; a fine quarry of which exists in the village. It is cut extensively into the various objects to which that fine stone is commonly applied. Beside the common county buildings, this town contains an academy, two printing offices, and a number of places of public worship.

Middleburg college has been incorporated since 1809, and though entirely supported by private bounty, has extensive and elegant buildings. It has a president, 5 professors, 2 tutors, a respectable library of 1200 volumes, and a philosophical apparatus. Students about 100. Population of the village in 1800, 2138, and in 1820, about 2500.

Middleburg, post village and township, New Haven county, Connecticut, on a branch of Naugatuck river, 22 miles NW from New Haven. Population in 1820, 836.

Middleburg, township of Genessee county, New York, between Allens and Tonnewanta creeks, 12 miles S from Batavia. Population in 1820, 1782.

Middlefield, post village and township, Hampshire county, Massachusetts, 25 miles W from Northampton. Population in 1820, 755.

Middlefield, township of Otsego county, New York, between Cherry Valley and Otsego lake. Population in 1820, 2579.

Middle Granville, post village, Hampshire county, Massachusetts.

Middle Hadlem, post village, Middlesex county, Connecticut, on the left side of Connecticut river, 10 miles SE from Middletown.

Middleham, town in North Yorkshire, with a market on Monday, and a woollen manufacture. Here was a stately castle, now in ruins, in which Richard III. was born. It is seated on the Eure, 11 miles S by W of Richmond, and 255 NNW of London.

Middlesex, county of England, 22 miles long and 17 broad; bounded on the N by Hertfordshire, E by Essex, S by Surry and Kent, and W by Buckinghamshire. It contains 179,200 acres; is divided into 6 hundreds, and 98 parishes, beside those in London and Westminster; and has those two cities and six market towns. Beside the Thames, Lea, and Coln, which are its boundaries to the SE and W, Middlesex is watered by several small streams; one of which, called the New river, is artificially brought from near Hertford, for the purpose of supplying London with water. Population in 1801, 818,129; in 1811, 953,276; and in 1821, 1,144,531.

Middlesex, county of Massachusetts; bounded N by Hillsborough county in New Hampshire; NE by Essex county in Massachusetts; SE by Suffolk, Norfolk, and Boston harbour; and SW and W by Worcester. Length 40; mean width 20; and area 800 square miles. Surface delightfully variegated. Soil though varied and rather sterile generally, yields nevertheless, grain, pasturage, and orchard fruits in considerable abundance. The body of the country is drained by Concord river; the Nashua passes over its NW, and Charles river over its SE angle. Chief towns, Cambridge and Charlestown.

Milan, city of Italy, capital of the duchy of the same name, and the see of an archbishop. It was the ancient capital of Lombardy, and also of the late kingdom of Italy, Napoleon Bonaparte being here crowned king of Italy on May 26, 1805. The city is 10 miles in circumference; but the garden grounds are so extensive, that it does not contain above 140,000 inhabitants. It stands in a delightful plain, between the rivers Adda and Tesin, which communicate with the city, by means of two canals. The town itself has no other fortifications than a high wall and ramparts; but the citadel, called Castello di Porta Zobia, is a place of great strength. Here are 22 gates, a university, several colleges, many fine palaces, 230 churches, of which 96 are parochial, 90 convents, 100 religious fraternities, and a great number of hospitals. The cathedral is in the centre of the city, and next to St. Peters at Rome, is the most considerable in Italy. This vast fabric is built of white marble, supported by 50 columns, and adorned, within and without, by a prodigious number of marble statues; and its treasury is reckoned the richest in Italy, next to that of Loreto.

The college of St. Ambrose has a library, which, beside a prodigious number of manuscripts, contains 60,000 printed books; and its superb gallery is adorned with rich paintings. Milan has considerable commerce in grain, especially rice, cattle, and cheese; and has manufactures of silk and velvet stuffs, stockings, handkerchiefs, ribbons, gold and silver lace, and embroideries, woollen and linen cloths, glass, porcelain, and curious works in steel, crystal, agate, hyacinths, and other gems. It has been many times taken in the wars that have desolated Italy. It is now the seat of an Austrian Viceroy, and capital of the Lombardo-Venetian kingdom, or Austrian Italy. It is 135 miles NW of Florence. Lon. 9 12 E, lat. 45 28 N.

Milan, or the *Milanese*, late duchy and considerable country of Italy, included in the late Italian republic. It was bounded on the N by Switzerland and the country of the Grisons; on the E by the republic of Venice, and the duchies of Parma and Mantua; on the S by the duchy of Parma and the territory of Genoa; and on the W by Piedmont and Montferrat; being 150 miles in length, and 78 in breadth. The soil is every where fertile in corn, wine, fruits, rice, and olives; and there are also plenty of cattle. The rivers are, the Secchia, Tesin, Adda, and Oglio. There are likewise several lakes, the three principal of which are, those of Maggiore, Como, Lugano. Milan has considerable commerce in grain, especially rice, cattle, and cheese; and has manufactures of silk, and velvet stuffs, stockings, handkerchiefs, ribbons, gold and silver lace, and embroideries, woollen and linen cloths, glass, and earthenware in imitation of China. It is a peculiarly fertile and productive region, and cultivated with the utmost skill and care. It is now divided between Austria and Sardinia. Austrian Milan, contains about 8000 square miles, and 2,000,000 of inhabitants. Sardinian Milanese, extends over 3300 square miles, and peopled by 556,000 inhabitants.

Mirpoix, town of France, in the department of the Upper Pyrenees. It was lately an episcopal town, and is seated on the Gers, 15 miles N of Foix.

Miseno, cape of Italy, in the Terre di Laveri, between Puzzoli and Cumia. On it are the ruins of the ancient Misenum.

Miserden, village in Gloucestershire, six miles NW of Cirencester, famous for a park, in a valley of which is a mount of a circular form, now overgrown with trees. This was the site of an ancient castle, built in the reign of King John; and part of the moat, which encompassed the building, is still to be seen.

Misitra, town of Greece in the Morea. It is seated on the Vasilipotamo, ancient Euestas, two miles from the ruins of Sparta, 28 miles SE from Tripollizza, 120 miles SW of Athens, and 20 N by E of Lepanto. Lon. 22 30 E, lat. 37 6 N.

Mississauga River, of Upper Canada runs into Lake Huron, between le Serpent and Thersalon River, on the north shore.

Missassaga Point, or Upper Canada, lies in the township of Newark, lies on the west side of the entrance of the river Niagara, and opposite the fortress of Niagara.

Mississauga Island, Upper Canada, lies opposite the mouth of the Trent, and about the same distance from the portage at the head of the bay of Quinte.

Mississcoui, or *Mississki*, river rising in Canada, enters Vermont in Franklin county; whence it flows nearly in a western course to Michiscou or Mississcoui bay, a branch of lake Champlain.

Mississippi River. From the magnitude and importance of this great stream, the following comprehensive view is taken, not alone of its confluent properly so called, but also, those in the vicinity of its Delta, which enter the gulf of Mexico in the United States.

The most south-western stream of the United States is that of the Sabine. This river has its source in the province of Texas, North lat. 32 30. It flows in a general course nearly south, but curves to the eastward about mid-distance between its source and mouth. At North lat. 30, it expands into a large lake, of thirty miles in length, and from five to eight wide; which at its lower extremity, again contracts into a river, and discharges into the gulf of Mexico, at North lat. 29 28. West lon. from Washington city, 15 45.

The Sabine affords no navigation of consequence, having only three feet water on the bar at its mouth; the Sabine lake is also shallow, not having more than four or five.

The Calcasieu is the next stream east of the Sabine. The former rises in the angle between the latter and Red river; flows nearly south about 120 miles and falls into the Gulf of Mexico, thirty miles east of the mouth of the Sabine. The Calcasieu, similar to the Sabine, expands into a lake, and again contracts into a river channel, before its final discharge. The former is also similar to the latter in its navigation, being impeded by a bar, and by the shallowness of its large lake. The mouth of the Calcasieu river is at North lat. 29 20.

Following the coast of the Gulf of Mexico, twelve miles east from the discharge of the Calcasieu, is found the entrance of the Mermentau. This latter stream is formed by a number of branches, having their sources in the prairies of Opelousas. The general course of the Mermentau is from north-east to south-west about 100 miles. It is remarkable as possessing similar features to the Calcasieu and Sabine rivers, and

similar also in a defective navigation, arising from a bar at the entrance, and by the shallowness of its large lake, neither affording more than three or four feet water.

An interval of near sixty miles stretches east of the mouth of the Mermentau to that of the Vermilion, a fine but small stream, rising in Opelousas, but flowing through Attacapas into the Gulf of Mexico, after an entire course of about eighty miles. The lands along the Vermilion river are of the first quality, producing cotton, and towards the mouth some plantations of sugarcane have been successfully attempted; but vessels drawing more than five feet water cannot enter. The Vermilion enters the Gulf of Mexico at North lat 29 45.

The united streams of Atchafalaya, Teche, and Courtabeau, form a river of much greater importance and magnitude than any other in the United States, west of the Mississippi.

The Atchafalaya is the upper mouth of the Mississippi, and leaves the latter at North lat. 31, and West lon. from Washington city 14 47, by a stream 110 yards wide; its course is a little east of south, and by its windings forty-eight miles to where it receives the Courtabeau from the north-west. Below the Courtabeau, the Atchafalaya flows eighty miles, and is again augmented by the Teche, also from the north-west. After receiving the Teche the Atchafalaya flows twenty miles, where it is lost in a large bay known by the same name. The Atchafalaya bay is about twenty-three miles long, and thirteen miles wide. It is enclosed on the south-west by two long narrow points of land, Point Chevreuil, and Point au Fer. Between these two points extends a bar, over which there is nine feet water, and within the bay and river sufficient depth to permit the passage of any vessel to the mouth of the Teche, which can pass the bar. The mouth of Atchafalaya is at N lat. 29 21, W lon. from W C 14 22.

The Teche rises in Opelousas, and flowing thirty miles, enters Attacapas, where it receives a creek from the west, and assumes the form of a river. After entering Attacapas, the Teche continues, by a very winding course of eighty miles, a little east of south, to New Iberia, North lat. 30 2. The town of New Iberia stands upon the right bank of the Teche, at the head of schooner or sloop navigation. Vessels, however, drawing five feet water, can ascend to this place at all seasons. The Teche, below New Iberia, gradually widens from about 30

to 100 yards, and deepens from five to 30 or 40 feet. Its stream now turns ESE and continues 90 miles, where it mingles its waters with the Atchafalaya.

The Teche is a small, but very singular and important stream. In all its length, of about 130 miles, it drains one of the most fertile tracts in the United States. On its upper waters cotton, and towards its mouth sugar and molasses, are the staples produced for market.

New Iberia is a port of entry, and vessels are frequently cleared out from that place, but the general commercial communication is with the city of New Orleans, through the Atchafalaya, Plaquemine, and Mississippi, or by the lakes Palourde and Verret, and the Lafourche and Mississippi rivers.

The Plaquemine is an outlet of the Mississippi, 117 miles above New Orleans. It is only during the seasons of flood that water is discharged into the Plaquemine, which, after a very circuitous course of fifteen miles, joins the Atchafalaya. Through the Plaquemine is, however, transported most of the merchandise for the supply of the very flourishing settlements of Attacapas and Opelousas; and by this route is also sent to market the valuable staples of those places.

Boats from fifteen or twenty, to fifty or sixty tons, ascend from New Orleans, and entering the Plaquemine, pass into the Atchafalaya. Those destined to the lower parts of Attacapas descend the latter river, and enter by the mouth of Teche. Those bound to the central part of Attacapas ascend the Atchafalaya about twenty miles, and thence, by an outlet and Lake Cheimaches, proceed to the Fausse Point landing. Here is a portage of ten or twelve miles to St. Mariusville, the chief town of Attacapas. Another outlet, and a chain of small lakes and bayous (creeks,) enable vessels to be conveyed to the upper part of Attacapas, and the lower part of Opelousas. Vessels destined for the higher and central parts of Opelousas, ascend the Atchafalaya to the mouth of Courtableau, and thence up the latter river to Lemell's landing, six miles, or into Bayou Carron, within four miles from St. Landré, seat of justice and chief town of Opelousas.

The Courtableau is a fine little river, formed by the united streams of Crocodile and Bœuf. The two latter creeks unite at N lat. 30 34. The general course of the Courtableau is south-east, about thirty miles in length. It affords, during high water, part of a very eligible channel of communication between the settlements of Opelousas, and the lower part of Rapides, with the banks of the Mississippi.

The navigation of the Atchafalaya is entirely obstructed by rafts of timber, above the mouth of the Courtableau. These extraordinary masses of trees commence twenty-six miles below the efflux of the Atchafalaya from the Mississippi, and extend by intervals to within five miles of its junction with the Courtableau.

Advancing along the Gulf of Mexico, eastward from the mouth of Atchafalaya, the Lafourche is the first inlet of consequence, in a commercial point of view. In the intermediate distance of sixty miles, several small creeks enter the Gulf, but from their very abridged length of course are unimportant.

The Lafourche, (the Fork,) as its name imports, is an outlet of the Mississippi, and the second from the right in descending from the Atchafalaya, the Plaquemine being the first. The outlet of the Lafourche is at N lat. 30 6, W lon. from W C 14 1. After leaving the Mississippi, the general course of the Lafourche is south-east by south, ninety miles. It enters the Gulf of Mexico at N lat. 28 57. W lon. from W C 13 39.

The Lafourche is one of the most important inlets of Louisiana, having 9 feet water on its bar, and admitting vessels drawing 4 or 5 feet to within 30 miles of its efflux. An arable border of extremely productive soil, skirts both banks of the Lafourche for 60 or 70 miles from the Mississippi. Cotton and sugar are the principal staples. Most of the produce and merchandise of the settlements along its banks, are transported by the Mississippi, to and from New Orleans.

Between the mouth of the Lafourche and that of the Mississippi, several inlets admit a boat navigation to New Orleans. The principal of these bays, is that of Barataria, by which, and a number of lakes and interlocking streams, a direct communication exists from the Gulf of Mexico to the Mississippi at New Orleans.

The Mississippi itself has three main and three lesser passes or outlets. The most frequented of which is that of the South-east, upon the bar of which there are 12 feet water at low tides. Next to that of the South-east that of the South-west is the best entrance. The latter has indeed as great a depth of water as the former. Upon the South Pass there are 8 feet water. These three are the chief outlets of this great stream. The West, North, and pass à la Loutre, have from 5 to 8 feet water on their respective bars.

Between New Orleans and Mobile bay, a very interesting inland navigation ex-

ists, through Lake Pontchartrain, the Rigolets, Lake Berne, Pass au Christian, and Pass au Heron. This channel is formed by a chain of islands, the low marshy expanse north-east of the Mississippi river, and the main shore of Louisiana and Mississippi. Vessels above five feet draught cannot make this passage, as over either the shoals of the Pass au Christian, or Heron, that is the ordinary depth.

This interior channel is continued, to the north-west of New Orleans, by Lake Pontchartrain, Pass au Manchac, Lake Maurepas, Amite river, and Bayou Iberville, to the Mississippi river, 125 miles, by water, above that city. Schooners drawing five feet water, go up as far as Galvez town, at the confluence of Bayou Iberville and Amite rivers. From the efflux of the Iberville to the Pass of Heron is about 200 miles, 80 of which are to the north-west, and 120 to the north-east by east of New Orleans. Into this extensive channel are discharged, exclusive of the Amite and Mobile rivers, the Tickfoha, into Lake Maurepas; the Tangipao and Chifuncte, into Lake Pontchartrain; Pearl river into the Rigolets; and the Pascagoula, opposite Horn island. Each of those minor streams afford less or more facilities to navigation, but do not admit vessels of more than five feet draught but a very short distance from the sea. Schooners are most commonly used in the commerce of these inlets and shallow rivers. A steam-boat plies, however, between New Orleans, and Mobile and Blakley.

Mobile bay is a fine sheet of water, of 30 miles in length, with a mean width of 11 miles. Dauphin island, and Mobile Point, land-locks Mobile bay. The main entrance, with 18 feet of water, lies between the island and point. Pass au Heron, with 5 feet, lies between Dauphin island and the main shore of Alabama. A bar, with only 10 feet of water, crosses Mobile bay, about five miles below the town of Mobile.

Above Mobile town the bay gradually ceases, and is succeeded by a low sunken tract of 30 miles in length, and from 3 to five miles wide. Through this occasionally inundated tract, beside many minor streams, meanders the Mobile and Tensas rivers; the former being the continuation of the Tombigbee, and the latter of the Alabama river. Vessels drawing five feet water are taken as high in the Tombigbee as Port St. Stephens, and in the Alabama to Fort Claiborne. At each of those two latter places, shoals impede the farther navigation of the rivers respectively, with vessels propelled by sails, though boats ascend and descend, in the Tombigbee, to

Cotton Gin port, and in the Alabama, to its head at the junction of Coosa and Tallapoosa.

East of Mobile, Pensacola is the first harbour of any consequence. The Perdido intervenes, but having but little water, and terminating in a barren uninteresting country, merits no particular notice. Pensacola, to its depth of water, is one of the finest havens of the world. Its entrance is at North lat. 30 23, West lon. from Washington city 10 20. The entrance between Rose island and Barancas point is over a bar having twenty-two feet water, upon a fine sandy bottom. The bay is about twenty miles in length, with a mean width of about three miles. The anchorage is, in every part, a soft mud or sand. No rocky banks or dangerous shoals environ this noble sheet of water. The bay, above the town of Pensacola, is divided into two arms; one, stretching north, receives the Escambia, and the other, to the north-east, the Yellow Water river.

The basin of the Appalachicola is remarkable as forming the connecting link between the waters which flow into the Gulf of Mexico, from those which enter the Atlantic Ocean. The Appalachicola is formed by two streams, the Chatahooche and Flint rivers. The former rises in the Appalachian mountains, at North lat. 35, interlocking with the sources of Tennessee, Oakmulgee, Oconee, and Savannah rivers; and flowing south-west by south, through two degrees of latitude, turns thence nearly due south, to North lat. 30 45, where it receives the Flint. The latter, an inferior stream to the former, has its sources in the angle between the Oakmulgee and Chatahooche rivers, at North lat. 33 40, and flowing south-west by south, 200 miles, unites with the Chatahooche, and forms the Appalachicola.

This latter fine river flows a little west of south, to North lat. 29 50, having an entire course of about seventy miles; its mouth is into St. George's sound.

The basin of the Appalachicola affords an inland navigable expanse of 400 miles in length, with a mean width of 150, and having an area of about 20,000 square miles. Though interrupted by some falls, and many shoals, the rivers of Chatahooche and Flint are navigable almost to their sources; and schooners of considerable size ascend the Appalachicola to its head.

Cotton, tobacco, grain, tar, and lumber, are the common staples of this basin.

In all the immense distance from Pensacola to the bay of Espiritu Santo, except the mouth of the Appalachicola, there is no inlet of any commercial consequence in a general view.

The fine bay of Espiritu Santo is situated upon the west coast of the peninsula of

East Florida, at North lat. 27 40, West lon. from Washington city 6 20. There is about two feet more water on the bar of Espiritu Santo than upon that of Pensacola, but the country around the latter remains so imperfectly known, that its commercial value cannot be estimated with any certainty at present.

Having followed in regular order the minor streams flowing into the Gulf of Mexico, we now turn to a review of the basin of the Mississippi.

This great stream, forming a river of the first order, deserves particular notice in an elementary work. Under the general term Mississippi, we include not only that river properly so called, but every secondary or confluent body of water which enters into, or contributes to augment the mass of the main recipient.

Following this plan, the basin of the Mississippi may be naturally divided into four grand sections; first, advancing from east to west, the valley of Ohio and its tributary waters; that of Mississippi and its branches; that of Missouri and its branches; and that of the lower Mississippi, below the mouth of Missouri. Of these sections in order.

Ohio valley.—This very important region embraces about 200,000 square miles of area, equal to 128,000,000 of United States acres. Its greatest length is from the north-east sources of the Allegheny river to the head of Bear creek, a branch of Tennessee river, 750 miles. Its greatest breadth, from the sources of the French Broad, to those of the Wabash river, 500 miles. In point of climate, it extends from North lat. 34 to 42 30, or through seven and a half degrees of latitude, affording a very considerable difference of seasons and temperature.

It has been long the opinion of the author of this article, an opinion formed from the fruits of many years observation, that the Ohio region once formed an immense inclined plane; and that the beds of all the rivers have been formed by abrasion of water. This theory is supported by Mr A. Bourne, author of a large and valuable map of the state of Ohio. The following is a quotation from a manuscript letter from that gentleman on the subject. "The hills are generally found near the rivers or large creeks, and parallel to them on each side; having between them the alluvial valley, through which the stream meanders; usually near the middle; but sometimes washes the foot of either hill alternately. Perhaps the best idea of the topography of this state may be obtained, by conceiving the state to be one vast elevated plain, near the centre of which the streams rise, and in their course wearing down a bed or valley, whose depth is in proportion to

their size, or the density of the earth over which they flow. So that our hills, with some few exceptions, are nothing more or less than cliffs or banks made by the action of the streams; and although these cliffs or banks, on the rivers and larger creeks, approach the size of mountains, yet their tops are generally level, being the remains of the ancient plain. In the eastern part of the state, some few hills are found in sharp ridges similar to those in the eastern states. The base of the hills is generally composed of limestone, free, or sandstone, slate, and gravel, admixed with mineral coal, ochre, &c."—*Bourne*.

The author of this article surveyed, in 1815, Pittsburgh and its environs, and found the rocks there, as in every other part of the Ohio valley perfectly parallel to the horizon, of course, speaking technically, floetz formation. The circumstance most conclusive of the fact, that the hills and valleys of this region were formed by abrasion, is the uniformity of elevation and similar material of corresponding strata on the opposing banks of the streams; phenomena every where visible, where the nature of the country will admit accurate observation. The coal strata near Pittsburgh are in every place found about 340 feet above low water level in the rivers of that vicinity.

Embracing the whole Ohio valley in one perspective, it is found divided into two very unequal portions by that river; leaving 120,000 square miles to the south-east, and 80,000 on the north-west. The Ohio, forming a common recipient for the water of the minor streams of both slopes, flows in a very deep ravine, south 64° west, 478 geographical, or 518 miles, in a direct line from Pittsburgh to the junction of this river with the Mississippi. The entire length of Ohio by its meanders, is by actual admeasurement 948 miles.

The peculiar features of this river, and its immediate banks, have led to most of the gross misrepresentations respecting the valley in general. The low water surface of the Monongahela at Brownsville, has been found to amount to 850 feet above high tide in the Chesapeake bay. Estimating the fall in the Monongahela to be twenty feet from the borough of Brownsville to the city of Pittsburgh, would produce 830 feet as the elevation of the latter place above the Atlantic Ocean. The apex of the hills in the vicinity of Pittsburgh, are within a small fraction of 460 above the low water level of the Monongahela, Allegheny, and Ohio rivers. By these elements we have 460 added to 830, or 1290 feet as the extreme elevation of the hills near Pittsburgh above the Atlantic tides. We may, therefore, if the correctness of our previous theory is admitted,

suppose that the latter elevation was that of this part of the original plain from which the valley has been formed. This elevation evidently declined towards the now mouth of the Ohio, leaving a descent for the waters.

The actual elevation of the present surface of the country, adjacent to the great central junction of the Mississippi with its confluent, is not determined with the same precision with that of Pittsburgh: but, from the length of the Mississippi below the mouth of Ohio, a near approximation may be obtained. From the mouth of Ohio to that of the Mississippi, the distance is within a small fraction of 1100 miles, which, at three and a half inches to the mile, yields 3850 inches, or 320.8 feet, as the entire depression of the Mississippi river from the mouth of Ohio to the Gulf of Mexico.

The fall in the Ohio river exceeds that of the Mississippi, and has been estimated at about five inches to the mile, consequently, if we multiply 948 miles, the entire length of Ohio, by 5, we have 4740 inches, or 395 feet, as the amount of descent in that stream; and, adding 395 to 320.8 feet, we find 715.8 feet as the declivity of the waters from the confluence of the Monongahela and Allegheny rivers at the city of Pittsburgh, to the Gulf of Mexico.

A very remarkable difference is perceptible between the different elevations of Pittsburgh above the Chesapeake bay and Gulf of Mexico, amounting to more than 125 feet, in favour of the former sheet of water. This apparent phenomenon is explicable on the simplest laws of hydrostatics. The Gulf stream flows from the Gulf of Mexico towards that part of the Atlantic Ocean adjacent to the Chesapeake bay, demonstrating that a difference of level must exist between the extremes, sufficiently great to admit a current of considerable velocity. That velocity has never been very accurately determined; but, if we allow only one and a half inch per mile, would yield in 900 miles 112½ feet. That the actual fall from Florida channel to the mouth of the Chesapeake bay, considerably exceeds 100 feet, there can be no rational doubt, when the necessary geographical phenomena are duly examined.

We may, from the data given, consider the valley of Ohio composed of an inclined plane, chequered by the deep channels of the rivers, hills, and extensive flats, the whole resting upon a base of secondary formation. In many parts of this interesting region, as in the state of Kentucky, the beds of the rivers are vast chasms, rather than valleys, in the true acceptation of the latter term. The two opposing slopes exhibit some very curious contrasts. Though considerably most extensive, the south-east-

tern slope has no extensive remains of the ancient plane; the north-western slope, on the contrary, contains immense remains of the former plane. The rivers which enter the main recipient from the former, rising in or near the north-western ridge of the Appalachian mountains, are precipitous from their sources, flowing, as already observed, in very deep channels: whilst those streams which enter from the north-western slope, rise out of a level continuous plain, in many places morass, as in part of the states of Ohio and Indiana. The latter rivers are sluggish towards their sources, gaining velocity in their advance towards the Ohio river.

The secondary rivers of the south-eastern slope are, the Monongahela, Little Kenhawa, Great Kenhawa, Sandy, Licking, Kentucky, Greene, Cumberland, and Tennessee. Those flowing from the north-western slope are, the Allegheny, Beaver, Muskingum, Hackhocking, Sciota, Miami, and Wabash. Of these streams, the Allegheny rises in Pennsylvania, flows into New York, and winding from north-west to west, and south-west, again enters Pennsylvania, forming the north-western, or rather northern constituent of Ohio. No branch of the Allegheny flows from the high table land; the region it waters is in some parts mountainous, and every where hilly; the sources of the Allegheny flow, however, from the highest point of the valley of Ohio. Advancing westward from the region watered by the Allegheny, the sources of the Beaver exhibit the commencement of the great central plain, which separates the two great basins of the Mississippi and St. Lawrence. This plain stretches westward, and, widening in extent through the states of Ohio, Indiana, and Illinois, reaches the Mississippi river. In its natural state, the valley of Ohio was, in the greatest part of its extent, covered by a dense forest: but the central plain presented a very remarkable exception. As far east as the sources of Muskingum, commenced open Savannas, covered with grass, and devoid of timber. Similar to the plain itself, those Savannas expanded to the westward, and on the waters of Illinois river opened into immense natural meadows, generally known under the denomination of prairies.

We have dwelt with more minuteness on this central plain than we would otherwise have done, from a conviction that it affords phenomena highly illustrative of the peculiar structure of that part of North America. It has been shown in this article, that the surface of Ohio, at the city of Pittsburgh, was 830 feet above the nearest tide water of the Atlantic Ocean, and 715.8 feet above the surface of the Gulf of Mexico. Lake Erie has been found by actual admeasure-

ment, 565 feet above the tide water of the Hudson at Albany; consequently, the Ohio at Pittsburgh is 265 feet above the surface of Lake Erie; the intermediate distance, in a direct line, 105 miles. Therefore, if a channel was open from the Ohio river at Pittsburgh to Lake Erie, as deep as the bottom of the river, and sloping towards the lake by gradual descent to its surface, the waters of Alleghany and Monongahela would, in place of flowing down Ohio, rush into Lake Erie with the enormous velocity arising from a fall of 265 feet in 105 miles; or upwards of two and a half feet per mile. When these mathematically established facts are contrasted with the circumstance, that the extreme north-western waters of Alleghany, those of Lake Chataughque, rise within three miles from Lake Erie, the singular but real construction of the country becomes apparent. Nothing but actual measurement could render credible, that Pittsburgh, situated at the confluence of two streams, each of which, following their meanders, have flown above 200 miles, and one of which, (Alleghany,) having part of its source so near the very margin of Lake Erie; and yet, that the city of Pittsburgh should be elevated 265 feet above the surface of the lake.

But by far the most remarkable feature of the Ohio valley is, that its real slope does not correspond to the courses of its rivers. It is a fact not well known, that loaded boats at high water can pass from Lake Michigan into Illinois river, and vice versa. We have seen that Lake Erie was 565 feet above the level of the Atlantic tides. The elevation of Lake Michigan above Lake Erie cannot, from the shortness and gentle currents of Detroit river, St. Clair river, and the straits of Michilimackinack, exceed 35 feet. We may, therefore, assume 600 feet as the level of Lake Michigan. This would correspond very nearly with that of the Ohio river, between the mouths of Miami and Kentucky rivers. Illinois river, we will see, presents much more the aspect of a canal than that of a river, whilst the central table land we have reviewed, is so elevated, as to produce water courses, whose descent is rapid, and those flowing into Lake Erie all precipitated over falls before reaching their recipient. During the continuance of spring floods, loaded boats of large tonnage may be navigated from the rapids of Ohio, by that river, the Mississippi and Illinois rivers, and through the Canadian sea to the cataract of Niagara, without meeting a single rapid; whilst the direct line between the extremes of this navigation, would pass over an elevated ridge. When due attention is paid to the real phenomena of the connected basins of Mississippi and St. Lawrence, the true causes

of the apparent anomalies we have noticed are developed. It is at once rendered apparent, that the true slope of the Ohio valley is nearly at right angles to the range of the Appalachian mountains, and that its lowest line of depression, is the channels of the Illinois and Mississippi rivers.

Soil, climate, and productions.—The soil of this interesting section of the earth, it by no means so uniform as is generally supposed, though, taken as a whole, may be considered fertile. The alluvial bottoms of the streams, great and small, are generally a deep loam, exuberantly productive. This rich vegetable earth, in many places reaches the apex of the highest hills. These hills present, however, great variety of soil; always clothed with timber, though often precipitous, rocky, and sterile. The extreme south-eastern part, from the sources of Alleghany to the most southern part of the valley in the state of Alabama, presents a mountainous or very broken hilly tract of country, upwards of 700 miles in length, with a mean width of about 100. The soil is on this region extremely varied, and as it contains at its extremities nearly the greatest contrast of latitude of the valley of which it forms a part, the vegetable productions, natural and artificial, are here also most varied. Very few timber trees, known on this continent between N. lat. 34 and 42 degrees, but which are here found. The most prominent and valuable species of which, are ten or twelve species of oak; hemlock, pine, the *Liriodendron tulipifera*; five or six species of hickory and walnut; three species of maple, one of which, the *Acer Saccharinum*, is amongst the most singular and valuable trees known on this globe; three or four species of ash, with an immense variety of useful trees and shrubs not enumerated. The Flora is also highly varied and elegant. Medicinal plants abound. Spring water is abundant and excellent.

Of naturalized plants, trees, and shrubs, the number and variety preclude a complete specification. Extending through eight degrees of latitude, and presenting considerable difference of level, the climates admit the cultivation of plants whose powers of resisting the inclemencies, or of profiting by the changes of seasons, are very different. The cereal gramina—wheat, rye, oats, barley, and Indian corn or maize, is every where cultivated. Meadow grasses flourish best in an advance to the north. In the southern part, even where extensive settlements have been made, meadows are rare; but towards the northward, form a large part of rural economy. This observation, though in a more limited extent, may be applied to orchards, and even gardens. Where the crops become very valuable, best culture is every where neglected.

ed, as are orchards, except in the vicinity of cities or large towns. In the region before us, below N lat. 35 30, cotton commences to be cultivated as a valuable crop. Some culture of this vegetable extends north of the assumed limit, but rather for domestic use than as an article of commerce. The quantity and quality of this vegetable is enhanced, soil and exposure being equal, in a very near ratio, with advance to the south. As we will have more occasion to dilate on this vegetable in the sequel of this article, it would, be irrelevant to touch farther on the subject in this place.

The orchard trees generally cultivated in the region before us, are the apple, pear, peach, plum, nectarine, &c.

The mineral treasures of this region compose a large share of its most valuable productions. Iron, salt, and mineral coal, are the most valuable and abundant. Iron ore is found in almost every section of this extensive line. The immense masses of mineral coal is very extensive: those near Pittsburgh are only the most abundant and best known. It is amongst the most remarkable features in the natural history of the United States, that from Onondago in the state of New York, to the south-west angle of Virginia, the earth appears in every place, at a certain depth, to afford water saturated with *muriate of soda* (common salt.) This indispensable mineral is found where, if wanting, it could not be obtained without very great expense. Salt is now made at Onondago in New York, Conemaugh in Pennsylvania, and on the Kenhawa and other places in Virginia;—all in the same range.

The Ohio river bounds the tract we have reviewed as far southward as the mouth of the Great Sandy. Here the former turns almost at right angles, and pursuing a course something north of west to the mouth of the Great Miami, again inflects about south-west by west to its junction with the Mississippi. This wide curve, in conjunction with a part of the Mississippi, bounds the great limestone expanse of Kentucky and West Tennessee. This latter region, though adjoining the former, presents features essentially different. The base of the Kentucky section appears to be in great part flötz or secondary limestone, the face of the earth becomes more monotonous; the rivers flow in many places in chasms, walled on both banks by precipices of limestone. Fresh water in many places, scarce. Minerals rare, if limestone is excepted. In point of climate and vegetable production, no very material difference appears between the contiguous parts of the two sections under review, except that which arises from

soil. In respect to extent and fertility, the soil of Kentucky and West Tennessee is generally productive, and in a variety of places highly fertile. Vegetables either indigenous or exotic, are very nearly similar, on both sections, on the same line of latitude, and of equal exposure and elevation. From a lower surface, cotton, and other tender vegetables, are cultivated farther north, near the Ohio, than towards the north-western ridges of the Appalachian mountains. The climate of both will be more amply noticed in the sequel of this article.

Respecting the north-western section of the Ohio valley, a few observations will suffice, after what has preceded respecting that of the south-east, and on the review of the whole valley in general. Similar latitudes present in great part similar climate, phenomena, and vegetable products. From the peculiar structure of the north-western section already delineated, it must be evident that mineral products are rare; and such is the fact. Iron ore is found, though not abundantly, in the north-west part of Pennsylvania, and north-east part of Ohio. Mineral coal abounds along the Ohio, and on some other streams, as far down the valley as Cincinnati, and might, it is probable, be obtained in other places, if the earth was perforated to sufficient depth. Indications of muriate of soda, and some trifling fragments of sulphate of lime (gypsum,) have been discovered, but neither to any considerable extent. In the far greater part, however, of this section of the Ohio valley, few or no indications of minerals appear. The flatness and peculiar structure of the two-thirds of the states of Ohio, Indiana, and Illinois, preclude the exposure of mineral bodies, if such existed. It has been by the action of water in wearing deep channels in the earth's surface, that mineral bodies have in most cases, been exposed to human view and use.

In point of soil, climate, and vegetable production, the south-western section of the Ohio valley has been too highly coloured, though favourable in many respects to human residence. The range of country within one hundred miles of the Ohio river being broken into hill and dale, good wholesome water is abundant, but receding to the central table land, is in many places wanting. In most essential circumstances, as respects natural phenomena and human economy, strong analogies exist between the contiguous parts of the two great sections of Ohio valley, whilst their extremes present a total contrast. It would be mere repetition to dilate further, after what has

been given on this subject; the foregoing observation was made in order to draw the reader's attention to features so strongly traced, and illustrative of the subject on which we are treating. It has been too generally prevalent with authors, as well as travellers, to represent the Ohio valley as a monotonous surface, uniform in aspect, climate, and fertility; whilst, in all these respects, perhaps no equal region of the earth presents, in all these points, more marked or more abrupt contrasts, if some very mountainous tracts are excepted.

Valley of the Mississippi Proper.—Before entering upon the physical survey of the particular valley of the Mississippi, above its junction with Missouri, it is necessary to take a view of the entire stream which now designates the whole basin.

In our defective state of information, it is impracticable to determine which is the most remote branch of the Mississippi, nor is it perhaps an object of much consequence. The latitude and longitude of its source are also undefined. Authorities on that subject differ so much, that no great confidence is due to any. It is probable, that, like other rivers, no real certainty of the main source or latitude is attainable without extraordinary pains and skill. We may, however, assume N lat. 48° 0, and W lon. W C 18° 0, as the source of that great river. Its general course is about south-west 300 miles, to the mouth of the Corbeau, which comes in from the right. Below the Corbeau, the Mississippi assumes a south-eastern course of 200 miles to St. Anthony's falls, at the foot of which it receives the St. Peter's, a large tributary stream from the north-west. Below the mouth of St. Peter's, the Mississippi continues south-east 80 miles, and in that distance receives from the left of the St. Croix, Chippaway, and Black rivers. Between the two former occurs Lake Pepin, a mere dilatation of the river. After receiving Black river, the Mississippi curves more to the south, and 80 miles below the former receives from the left a large branch, the Ouisconsin. Thence again turning to south-east 100 miles, is joined by Rock river, a stream of considerable size, flowing from north-east to south-west, and rising near Lake Michigan. Below Rock river, the Mississippi turns to a little west of south, 100 miles, to its junction with the Lemoine river, a very considerable tributary stream from the north-west. One hundred and twenty miles in a south-eastern course, below the Lemoine, the Illinois unites with the Mississippi,

and 15 miles lower, the latter and Missouri form their junction. The entire length of the Mississippi above the mouth of Missouri, is by comparative estimates 995 miles. The country drained by this river is generally rather level than hilly, much of its surface prairie. Except towards its source, no lakes of any considerable consequence are found on any of its confluent. Its waters is tolerably limpid, and its current gentle. Though, from accidental circumstances, the Mississippi has gained the pre-eminence in giving name to the general recipient, it is nevertheless, a mere branch, and by no means the principal one, of Missouri. Below their junction, the united stream flows 198 miles south-east, where it receives an immense accession of water through the channel of Ohio; below which, the congregated mass turns a little west of south, and flows in that direction 316 miles, receives the White river, and 14 miles lower the Arkansas; both from the right. The Yazoo enters from the left, 187 miles below the mouth of Arkansas; and 211 miles below the mouth of Yazoo, the Mississippi receives its last tributary stream of consequence, the Red river, from the right. Two miles below Red river, the Atchafalaya flows out to the south. From the mouth of Arkansas to the efflux of Atchafalaya, the general course of the Mississippi is nearly from north to south. Below the former, the latter assumes a south-east course, which it pursues 347 miles, to its final exit into the Gulf of Mexico. The entire length of the Mississippi, below the mouth of Missouri, is 1273 miles, by the windings of the stream. If one-third is added to its comparative length above Missouri, for its particular meanders, the result will give 1327 miles, which added to 1273, yields 2500 miles as the entire length of the Mississippi, following the bands.

Like all rivers of great length, the Mississippi is subject to an annual rise and fall. The periods of those floods are tolerably regular, but the quantity and elevation of the water differs continually, and often to many feet in two succeeding seasons. The river commences its swell generally in March, or the beginning of April. The increase of the water, at first rapid, gradually becomes more slow, until the supply beginning to exhaust, the volume commences its fall or decrease, which at Natchez, is in a long series of years, from the 15th to the 20th of June, and at New Orleans, in the first week in July. There is, however, in most years,

a lesser and earlier flood, which varies in time, much more than that of the spring and summer. In October, November, or December, this lesser flood intervenes generally, in the last days of December, and first of January. This lesser flood seldom rises so high as to overflow the banks, and it has been observed, that when the earlier flood is more than commonly high, that the later flood is in proportion, lower than common. The efflux of Plaquemine, is the common scale in the Delta of the excess and period of both floods.

The velocity of the current of the Mississippi has been greatly mistaken. Taking the motion of its swells, the only safe criterion, it is found that, below Ohio, the entire mass does not move as much as one mile per hour. The line of upper current moves more rapidly than the mass, but even the former does not move by any means with the rapidity usually supposed.

The depth of water in the Mississippi varies of course with the increase and decrease of its floods, but this difference of elevation is more perceptible above, than in the Delta. At Natchez, it is from 30 to 40 feet, at Lafourche about 23 feet, and at New Orleans about 9 feet. There is usually about 12 feet water on the bars of the North-east and South-west Passes, In the South and West Passes 9 feet, and in those of the North and Pass à la Loure 8 feet. Above the passes, the river deepens to upwards of 100 feet. At New Orleans it is upwards of 120, and at the Lafourche 153 feet at high water. There is no place below the mouth of Ohio, where the channel is ever less than 12 feet in depth,

Valley of the Mississippi proper; above the mouth of the Missouri.—In point of area, the valley of the Mississippi proper is not so extensive as that of Ohio, the former only extending over a surface of 180,000 square miles. Its greatest length is from the sources of Mississippi river to the junction of that stream with the Missouri, 650 miles, and its greatest breadth from the sources of the Wisconsin to those of Lemoine river, 350 miles.

Before proceeding farther, however, with the descriptive geographical detail, it may not be considered irrelevant, to review one of those great natural features of North America; without attention to which, no correct conception of its peculiar topography can be obtained. This feature is the great natural meadows, known by the name of Prairie. In a state of nature, with but very par-

tial exceptions, a dense forest covered all those parts of the continent of North America contained in the Atlantic slope; the lower part of the basin of St. Lawrence, below the head of Lake Erie, and two-thirds of that basin to its extreme north-western point; north of the St. Lawrence basin to the 55th degree of North lat.; four-fifths of the valley of Ohio; the residue of the continent east of the Mississippi river to the Gulf of Mexico; and west of that stream from 50 to 100 miles. This enormous forest, one of the largest on the globe, remains yet nineteen parts in twenty;—the efforts of man having made but partial inroads on either its mass or extent. This great forest is bounded on its western limit by another region of much greater area, but with a very different character. The second may be strictly called the grassy section of the continent of North America, which, from all that is correctly known, stretches from the forest region indefinitely westward, and from the Gulf of Mexico, to the farthest Arctic limits of the continent. The two regions are not divided by a determinate limit. In passing from one to the other, the features respectively are so blended, that the change is in most places imperceptible; though in some instances extremely abrupt.

In general, the prairie region is less hilly, mountainous, or rocky, than that of the forest; but exceptions in both cases are frequent. Plains of great extent exist in the latter, and mountains of no trifling elevation and mass chequer the former section. We are now to approach the survey of regions in which prairie forms no small part of the entire surface, and will in the sequel reach others, where those seas of grass extend over almost the whole superficies.

The extreme northern source of the Mississippi, strange as it may appear, continues unknown. In Melish's map, it is laid down at Turtle lake, 47° 45' North lat. whilst in Schoolcraft's map, lately published, the sources of that great river are extended to the Lakes Labeish and Turtle, both extending above North lat. 49°: a discrepancy between these two authorities of course exists of 1° 14' of lat. The nature of the country, indeed, renders precision on this point difficult, without extreme expense of labour and time. We will assume North lat. 48° as the source of this great river; its junction with Missouri being at North lat. 38° 56', it flows consequently through nine degrees of latitude, within a trifling fraction. The length of the Mississippi above the mouth of the Missouri, is still less ac-

curately known than the position of its source, every authority differing from each other on the former subject. That nearly all estimates of its length are overrated, there are many weighty reasons to believe. Compared with the Ohio, on most maps, no essential difference appears, when the Alleghany is added to the latter. The actual length of the Ohio, by its meanders, we have shown to be 948 miles; that of the Alleghany is about 250; the two distances united amount to 1198, say 1200 miles. For a long period, the Ohio itself was estimated at 1188: more correct information corrected the error. On all maps, and from every information we have seen, the sinuosities of the Ohio are at least as great as that of the Mississippi; we may, therefore, without much risk of material error, give 1327 miles as the maximum length of the latter stream.

The confluent rivers of the Mississippi, advancing from its source along its right bank, are, Leech Lake river, Vermillion, Pine river, Riviere de Corbeau, Elk, Sac, and Crow rivers: these enter above the Falls of St. Anthony; below that point are, St. Peter's Upper Iowa, Turkey, Little Maquaqueois, Galena, Great Maquaqueois, Lower Iowa, Lemoine, and a few other streams of little note between the mouth of Lemoine and that of Missouri. From the left the Mississippi receives advancing from its source, Thornberry river, Round Lake river, Turtle, Portage river, Chevreuil, Prairie, Trout, Sandy Lake river, St. Francis, and Rum rivers. These streams enter above the falls of St. Anthony. Below that point are, St. Croix, Chipeway, Black, Prairie le Crosse, Ouisconsin, Sissinawa, Riviere au Fevre, Rock, Henderson's, and the Illinois. These streams are given, in most part, from the authority of Mr. Schoolcraft, and are also more minutely detailed, from the circumstances that the valley of the Mississippi proper is yet imperfectly known, of great importance in the geography of the United States, and that the source of intelligence is recent and respectable.

Mr. Schoolcraft estimates the elevation of the sources of the Mississippi at 1330 feet above the Atlantic. From comparison with our calculations respecting the descent of the Ohio, a very remarkable coincidence appears, though founded upon totally independent data.

The valley of the Mississippi, though contiguous to that of Ohio, exhibits an as-

pect essentially different. The sources of the latter we have found issuing from an elevated, mountainous, hilly, and broken country; those of the former, on the contrary, flow from an immense marshy plain, in great part devoid of timber. The humble elevation of the region from which the sources of the Mississippi are drawn, accounts for the adjacent country remaining in its primitive state, and fully corroborates the correctness of the theory assumed respecting the valley of Ohio.

One of the first observations which strikes the mind on a survey of this extensive tract, is, its general monotony. No chains of mountains of note, or even lofty hills, rise to vary the perspective. Some elevations there are towards the sources of the largest confluent, and a few solitary hills, dignified, for want of contrast, by the title of mountains. The Mississippi is traversed by several falls, such as those of Pecagama, about midway between Sandy and Winnepeg lakes, at North lat. 47° 30'; the Little Falls, at North lat. 45°; the Big Falls, below the mouth of the Sac river; and those of St. Anthony, at North lat. 44, immediately above the mouth of St. Peter's river. The view of extensive prairies, when first seen, have an awful and imposing effect on the mind, but that impression is soon lost, and a dreary void obtrudes in its place. Many parts of the Mississippi banks are high, broken, and precipitous; but taken as a whole, this great valley presents few objects upon which those can dwell with interest who pass from the rich ever varying scenery of Ohio; particularly that of its banks and south-eastern slope.

Had the head waters of the Mississippi descended from a mountainous, or even a very high table land, similar to that from which flows the Ohio, with a slope of sufficient inclination, the general face of the country, drained by the former river, would have now assumed an aspect, similar to that from which flow the head waters of the latter. But in reality, though on a much larger scale, the Mississippi resembles those of the north-west slope of the Ohio valley, in the circumstance of flowing from a flat table land, and in gaining ascent and depth of channel in their progress towards their respective recipients. It is a feature peculiar perhaps to the Mississippi, that the country adjacent to its source and that near its final discharge, are in so great a degree similar in their general physiognomy. A difference of lat. of 10 degrees precludes much resem-

blance in vegetable stationary animal production. But according to Mr Schoolcraft, who visited its sources in the month of July, the migratory water fowl found there at that time of the year, are very nearly specifically the same found at its mouth in the months of December, January, February, and March. "It is also deserving of remark," says that writer, "that its sources lie in a region of almost continual winter, while it enters the ocean under the latitude of perpetual verdure."

Climate, Soil, and Production.—Extending through nine degrees of latitude, the change of climate in the valley of the Mississippi proper, is greater than found in any other valley in the basin of which it forms a part, except the more northern parts of that of Missouri. So defective is our information respecting the larger tributaries which enter the Mississippi above Missouri, that little more need be added respecting the Mississippi valley in general. Suffice to say, that in point of soil, vegetable and mineral productions, lead excepted, this valley is in every respect inferior to that of Ohio. The ordinary timber in similar latitudes are nearly the same in both valleys; but towards the sources of the Mississippi, pine, spruce, cedar, maple, and white birch are the prevalent timber trees. In fact, the far greater part of the upper, and much of the lower part of the valley, is composed of prairie, low swamp, or lakes. Much good alluvial land, particularly on the Illinois, borders the streams, but in no moderate proportion to what is found in the valley of Ohio.

In the lower part of the Mississippi valley the exotic vegetables cultivated are, in most part, the same found in our middle states generally. The climate being rather more severe in a given latitude in the Mississippi basin than on the south-east side of the Appalachian mountains, some small difference of vegetable location may exist, but not to any very great amount.

Towards the sources of the Mississippi, the wild rice (*zizania aquatica*) abounds in the swamps, and along the low margins of the rivers and lakes, and constitutes no small part of the food of the natives. Perhaps in an advanced state of society, this species of cereal, which can be cultivated in places unsuitable to any other vegetable, may become the resource of civilized man, and under skilful culture attain a development similar to what has taken place with other grains, such as wheat, rye, oats, barley, and maize. In fine, in the valley of the Mississippi, we find every object denoting our approach to the wide spreading waste on which we are now to enter.

Valley of Missouri, above its junction with the Mississippi.—The Mississippi having

been first discovered, has by prescription given name to the whole basin; but the Missouri, above their junction, is a stream which has drained a country of more than 2½ times the extent of the valley of the former. The error is now without remedy; therefore, though of so much greater magnitude, must, in a geographical point of view, be considered a tributary stream to the Mississippi.

Missouri river rises in the Chippewan, or, as they are absurdly called, Rocky Mountains. What is by pre-eminence called Missouri, is not the main stream, if our maps are even tolerably correct. The Yellow Stone river is longer than its rival above their junction, and receives larger and longer tributary streams. Assuming, however, Jefferson's river as the extreme source of Missouri, the latter will rise at North lat. 44 20, West lon. from Washington City 35. The general course for about 120 miles is north-east, receiving in that distance several tributary streams. It thence turns north 120 miles, and about North lat. 46 20, is augmented by Dearborn's river from the north-west. It thence curves to the north-east 80 miles, to the entrance of Marias river from the north-west. Below its junction with the Marias river, the Missouri pursues an eastern course 150 miles, and thence a north-eastern course of 150 miles to the mouth of Yellow Stone river. Estimating the distance from its source, by either branch, along the streams the Missouri has flowed, at its junction with Yellow Stone river, more than 1000 miles, and has drained above 150,000 square miles of surface, mostly prairie. Its volume is here, perhaps, as wide and deep as at its junction with the Mississippi. After receiving the Yellow Stone, the Missouri curves first north-east, and thence south-east, 200 miles, to the Mandan villages, at North lat. 47 25. Between the mouth of Yellow Stone river and the Mandan villages, the volume of Missouri has gained its extreme north bend at North lat 48 20, and has, besides many lesser tributaries, received the Little Missouri from the right, flowing from south-west to north-east. Nearly opposite to the mouth of the latter, the Moose river branch of Assiniboin rises within less than one mile from the bank of the Missouri. At the Mandan villages, the Missouri turns directly south, and flows in that course through four degrees and twenty minutes of latitude, or near 300 miles. In this distance it has received a few unimportant tributaries from the left, and from the right the large streams of Cannon Ball, Wetarhoo, Sawarcarna, Chayenne, Teton, and White rivers. Below the mouth of the latter, the Missouri turns to the south-east, east, and south, 300 miles, to its junc-

tion with the La Platte, an immense body of water flowing from the west, and heading with the Arkansaw, Lewis's, and Yellow Stone rivers. In the latter course, the Missouri has also received from the left the Jacques, and Great and Little Sioux rivers. Below its junction with the Platte, the Missouri flows 200 miles south-east to the mouth of the Kansas river, a large tributary flowing from the west, and heading between the Arkansaw and Platte rivers. The Missouri has now gained nearly the thirty-ninth degree of north latitude, and turning to a little south of east 250 miles, joins its vast volume to that of the Mississippi, after an entire comparative course of 1870 miles, and particular course of about 3000 miles. Between the mouths of the Kansas and Mississippi rivers, the Osage, a large branch, enters Missouri from the south-west. The Osage is a considerable stream, rising in the angle between the Kansas, White, and Arkansaw rivers.

Our geographical knowledge of the various branches of Missouri, is still more limited than respecting the Mississippi. Of the main stream, as high as the Mandan villages, our notices are tolerably ample. Lewis and Clarke, Stoddard, Brackenridge, Bradbury, and others, have enlarged the public stock of information on this interesting topic: but with all that has yet been published, a feeble light has been thrown upon those immense regions.

The greatest length of the basin of Missouri is from the mouth of that stream to the head of Marias river, 1200 miles; its greatest breadth from the sources of the Platte to a few miles south-east of the Mandan villages, 700 miles. The outline is too vaguely known to admit precision, as to the area of this vast extent; it must, however, equal if not exceed 500,000 square miles, equal to 320,000,000 United States acres.

General Features.—Engrasping the whole valley of Missouri in one view, two remarkable features must command pre-eminence; the turbid muddy appearance of the water, and the very great difference in length and volume of the confluent streams from the right bank, when compared with those from the left bank of the main recipient. Whilst from the right, the Missouri receives such vast branches as the Yellow Stone, Chayenne, Quicouire, Platte, Kansas, and Osage; from the left, all the branches are of minor importance. This characteristic continues to distinguish the valley of the lower Mississippi below the mouth of Ohio; where, to the great volumes of the White, Arkansaw, and Red rivers, are opposed the very inferior streams of the Yazoo, Big Black, and Homochitto.

It would appear that the Mississippi basin is divided into two immense inclined planes, falling from the two opposing chains of

mountains, that of the Chippewan, and the Appalachian; and that the two planes are in a very near ratio to the respective magnitude and elevation of the chains from which they decline. The line of contact between those planes is formed by the Illinois, and thence by the Mississippi, below the mouth of the former; and if we extend our views beyond the Mississippi basin, Lake Michigan is evidently the continuation of this line of depression to the north; whilst to the south-east, the rivers entering the Gulf of Mexico, as far as the Appalachicola inclusive, belong to the Appalachian plan; and to the south-west, all streams flowing into the Gulf of Mexico, as far as the Rio Grande del Norte, or even to the Sumasinta, appertain to the plane of Chippewan.

But to return to our particular subject, that of the Missouri valley. It would be useless to give a list of the smaller rivers of this tract, the names of which are hardly known. A general outline is all that ought to be attempted. The Missouri valley is bounded on the west by the enormous chain of the Chippewan or Rocky mountains, from which flow the sources of the Missouri and most of its largest branches. The exact elevation of the Chippewan, or indeed any of its peaks within the domain of the United States, have never been determined, and the result made public. The general table land upon which those ridges rest must from the great length of the Missouri exceed 3000 feet; perhaps about 5000 feet would be a safe estimate for the general elevation of the whole chain, particular peaks excepted.

The Chippewan partakes with the adjacent country the character of nakedness, timber being rare and of stunted growth. Like the Appalachian, and most other American mountains, the Chippewan is formed in collateral ridges, with deep intervening valleys. The rivers rise in these valleys and pierce the ridges in their course. The sources of Missouri extend along the chain through near eight degrees of latitude, or upwards of 500 miles. In this region the main stream and most of its tributaries flow to north-east. The sources of Big Horn, a branch of the Yellow Stone river, rise at North lat. 41 30, whilst Marias river has its most northern source above North lat. 48 30. Some of the northern confluent of Missouri probably lie as far as North lat 50°.

Missouri leaves the Chippewan by falling over continued ledges of rocks, in a distance of eighteen miles; after which, this overwhelming mass of water is augmented every few miles by large tributary waters, without falls or even shoals to its mouth. The channel is deep, and bounded by enormous precipices of rock. The immediate

margin of the streams only excepted, this almost interminable expanse is prairie, devoid of timber; and except the deserts of Arabia, no part of the earth presents an equal surface, less inviting to civilized man, than the far greater part of the valley of Missouri. Its asperities become more apparent as information respecting its real features expand. The general character of this extensive valley may be completed in few words; that, with some very partial exceptions, it is a wide and arid waste in summer, and over which, in winter, the piercing winds of the north sweep without impediment, and on which a dense civilized population can never exist.

Climate, Soil, and Productions.—In so wide an extent a very great diversity of climate must necessarily exist. From the considerable elevation of some parts, northern position of others, and the open exposure of nearly the whole extent, the winters are extremely severe. The whole of the valley, a small part of the south-eastern extremity excepted, has an aspect and climate with a striking resemblance to the steppes of central Asia; and like those steppes, must for ever be thinly peopled.

With the exception of the alluvial banks of the streams, the soil is, as far as correct information has been obtained, dry, and sterile, which, added to the want of timber, and in many places, of great extent, water, settlement of an agricultural people is rendered not only difficult but impossible.

The state of Missouri, embracing about 63,000 square miles, it is probable, if the advantages of climate are superadded to soil, possesses one-fourth part of the productive surface of this entire valley.

Of the indigenous vegetables of the Missouri valley little can be said. Mr. Bradbury was the only naturalist of sufficient skill to investigate the subject of its botany, who ever reached the interior of the valley, as far as the Mandan villages, and his opportunities of observation were so limited as to preclude extensive research.

It is probable that the mineral treasures of this extensive valley may in some measure compensate for its many other disadvantages. Of the quantity of iron ore and mineral coal laid open to the day along the banks of Missouri, Mr. Bradbury expresses himself in raptures. So small a part has been examined, and that so hastily, even by Mr. Bradbury himself, that no conclusive deductions can be made on any branch of the natural history of the valley of Missouri at present.

Valley of the Mississippi, below the mouth of the Missouri.—We now approach what may be strictly designated as the tropical

region of the United States, though the entire surface of the section under review is not included under that government. The common recipient, the Mississippi, has been noticed under the head of that river in general; we may therefore observe, that the section under review extends in its greatest length from the mouth of the Mississippi to the sources of the Arkansas, 1400 miles: the greatest width of the valley is, from the junction of the Mississippi and Missouri to the mouth of the Atchafalaya, 600 miles. The area of no section of the Mississippi basin can be determined with more difficulty than that under review. The sources and length of the two most considerable confluent remain uncertain to a very serious extent. In this article we have assumed 330,000 square miles, equal to 211,000,200 acres.

In respect to climate, the lower valley of the Mississippi extends from N lat. 29, that of the mouth of the Mississippi, to N lat. 42, the sources of the Arkansas river, or through 13 degrees of latitude, with a difference of elevation from the level of the Gulf of Mexico to at least 5000 feet. These extremes, when due allowance is made for the difference of elevation, amount to 28 degrees of latitude.

The principal confluent of this valley, which enter the main recipient from the right, are, commencing below the mouth of Missouri, Merrimack, St. Francis, White, Arkansas, and Red river; those from the left are, commencing below the mouth of Ohio, Kaskampa, Redfoot, Obian, Chickisaw, Forked Deer, Yazoo, Big Black, Homochitto, and Buffalo rivers.

Features.—The lower valley of the Mississippi is the most diversified section of the United States. Every variety of landscape, every trait of natural physiognomy, and an exhaustless source of metallic and vegetable production is here found. This expanse is limited on the east by a dense forest, and on the west by the lofty but naked spines of the Chippewan mountains.

After receding about 100 miles from the banks of the Mississippi to the west, and in many places a less distance, prairies commence, which, gradually encroaching on the forests, finally spread one wide waste of grass, as on the higher branches of the general basin. The open plains of Arkansas and Red rivers, are merely a continuation of those of the valley of Missouri, and with similar features. Those immeasurable plains of grass seem destined to be, in all future, as they have been in all former ages, the empire of ruminant animals, such as the buffalo, deer, wild goat, or antelope, and wild sheep. Following this apparent law of nature, if those prairies should ever become the residence of civilized inhabitants—those inhabitants

must be herdsmen, and not cultivators of the earth. As far as settlements have been made on one side of this grassy desert by the Spanish Americans, and on the other by the people of the United States, in western Louisiana and elsewhere, effects have followed natural causes, and the traveller finds a rude habitation on the banks of a brook or river, with a small field or two, in which a little maize and sweet potatoes are cultivated; and from thence the eye ranges over a shoreless sea of grass, on which cattle and horses are seen grazing in all directions. This is not the fiction of a sportive imagination; it is a reality which the eye that directs the pen that records the fact hath seen innumerable times. And it is here noted as illustrative of how much man is influenced in his modes of existence, his manners, and political condition, by the soil, climate, and other natural phenomena around him; and to the operations of which, as he cannot control, must submit. And such is the flexibility of human nature, that what was necessity becomes by habit pleasure, and the mounted herdsmen of New Mexico, Texas, Louisiana, and Arkansas, would not change condition with any other people on earth. Free as the plains on which they rove are wide, these horsemen know no luxury beyond their herds, sigh for no distinction but that of managing their steeds with most adroitness.

Such is the germ of a people, which, in the short lapse of two centuries, will inhabit a surface more than equal to two-thirds of all Europe. The mind cannot detach itself from this truly interesting subject without reflecting, that, to the physical similitude between the deserts of Arabia and the steppes of central Asia, with the interminable plains of interior North America, a strong moral resemblance does, and ever must continue to exist between the respective inhabitants of those distant regions.

To the many other features in common between the prairies of Red and Arkansas rivers, and the steppes of central Asia, is the prevalence of muriate of soda, (common salt) which, as has been observed, renders the water of those rivers brackish.

When we turn our eye to the entire surface of the valley under review, we find it divided into two very unequal portions. The grand recipient, the Mississippi, is seen rolling almost at one extremity; a narrow strip of land, with rivers of very small comparative magnitude, skirt its left bank. This confined border of about 500 miles in length, by a mean width of 50 miles, amounting to 25,000 square miles, is opposed by an extent of 305,000 square miles, watered by the great volumes of White, Arkansas, and Red rivers. Con-

sequently the valley is divided into two sections, the proportions of which exceed 16 to 1.

Next to the Mississippi itself, the Arkansas river would appear the most prominent object on this almost interminable landscape. When the Missouri is assumed as the principal stream, the Arkansas, in point of length, ranks as its second confluent, being longer than either the Plate, Mississippi Proper, or Ohio, which follow in order. The sources of the Arkansas remain unknown, to any precision, but are generally supposed to extend to north lat. 42, and west lon. from W C 34; the position of its mouth has long been sufficiently well known; it enters the Missouri at north lat. 33 56, and west lon. from W C 14 10. This stream, therefore, winds through upwards of eight degrees of latitude and twenty degrees of longitude. Its length, by comparative course, is about 1400 miles; but, by its meanders, must exceed 2000 miles.

The geography of the Arkansas has now become an object of the first importance, as its channel forms, from the 100th degree of longitude west of London, to its source, if those sources are south of north lat. 42, part of the limit between the United States and the Spanish dominions in America.

From the discoveries recently made by captain Long, the magnitude of the Arkansas has been hitherto underrated. A large body of water formerly made to enter Red river, is now found to flow into the Arkansas by the Canadian Fork. The Arkansas is more impeded by falls and cataracts, than any river of the great inclined plane we have noticed. Issuing from an elevated and mountainous region, the bed of this stream is unnavigable with large boats, except about 600 miles above its mouth. From thence it flows in a deep rapid channel of about six hundred yards wide, to its junction with the Mississippi. The particular tributary streams of the Arkansas remain in great part imperfectly known. This river now gives name to a territory of the United States, and in the lapse of a few years, will no doubt designate a state of the confederacy, similar to the Illinois, Missouri, and Mississippi.

Next in magnitude of volume, and length of course to Arkansas, is Red river. Like its rival, Red river flows from that spine of mountains, which, ranging from Mexico northward, assumes local appellations in different places; in Mexico this chain retains the native Atzac name of Anahuac; near the sources of Red and Arkansas rivers, it is known as the mountains of New Mexico; and farther north as the Rocky mountains, or the Chippewan.

Great uncertainty reigns over the sources of Red river; but, if the information given by captain Long be correct, and it is enti-

bled to great credit, those waters which originate from north lat. 32 to 35 degrees, and west lon. from W C from 25 to 28 degrees, which in all our maps are represented as flowing into the Gulf of Mexico, by the Colorado, and other streams, on the contrary, are the sources of Red river. By comparative courses, this stream is about 1000 miles in length; but following it by its meanders, is probably 1500 miles.

Both the Arkansaw and Red river have their regular periodical inundations, similar to the Mississippi, and enter their recipient at the season of flood respectively, with an immense body of water, which in no small degree continues to supply that enormous mass of fluid which annually rolls over Louisiana into the Gulf of Mexico. Arising from the saline and ochreous earths through which they flow, the waters of these two great rivers are in a considerable degree brackish; that of Red river so much so, that at Natchitoches, and from thence to its entrance into the Mississippi, cannot be used for either for drinking or for culinary purposes.

Red river enters the Mississippi at north lat. 31 1, and west lon. from W C 14 40.

The next confluent of the Mississippi, in point of magnitude, which enters from the right bank below the mouth of the Ohio, is White river. This latter river, though of greatly inferior length or volume to the two former, is of great importance from the extent of excellent land it drains. White river rises in the angle between Arkansaw and Osage rivers, and has its source mingled with those of both the latter, also with those of Merrimack and St. Francis. White river, after a comparative course of about 400 miles, falls into the Mississippi, a few miles above the mouth of the Arkansaw.

St. Francis and Merrimack would neither deserve particular notice amid the description of rivers such as we have been surveying, except as flowing from one of the most interesting metallic regions of this globe.

St. Francis rises in the counties of Washington and St. Genevieve, in the state of Missouri, and flowing south by comparative course 250 miles, enters the Mississippi on about hundred miles by water above the White river.

The Merrimack rises in the highlands between the sources of the St. Francis and those of the Gasconade, a branch of Missouri, flows east by comparative course one hundred miles, enters the Mississippi 18 miles below St. Louis.

It is unnecessary in this to notice the soil, climate, or productions of the lower Mississippi valley, as these subjects will come more appropriately under the respective heads of the states of Mississippi and Missouri. A reference is also made to the article of Mississippi state, as respects the

confluents of the Mississippi river, from its left bank, below the mouth of Ohio.

We may here remark, that including the basin of Columbia, the Trans-Mississippi Territory of the United States amounts to 1,144,843 square miles, equal to 732,699,520 United States acres.

To close the survey of the Mississippi basin, it only remains to examine the general laws by which the annual floods of the Mississippi are regulated and determined. In order to elucidate this subject, it is necessary to combine under one view the entire surface of the basin. This investigation embraces one of the most important questions in physical geography; it is to examine one of the most stupendous operations of nature, performed on a scale commensurate with the magnitude of the effect.

In our review of the valley of Ohio, 320.8 feet was given as the elevation of the waters at the junction of Ohio and Mississippi rivers. From want of correct data as to the real length or general fall of its waters, no satisfactory calculation can be made as to the absolute elevation of the sources of Missouri. We have assumed in this article 3,000 feet as the probable height, above the respective oceans, of the sources of that stream. In an analysis similar to that on which we are engaged, relative elevation is one of the elements most necessary to a correct result. We may remark in this place, with sincere regret, that during all the time in which our citizens have visited the sources of Missouri, that the elevation of not one peak or pass has been determined and published. We have, however, some facts which enable us, by analogy, to approach an accurate estimate of the height of the sources of the Missouri. From the extreme cold, and from the late continuance of snow at North lat. 45 or 46°, we cannot suppose the base of the Chipewyan mountains to be in that region less than 2,800 or 3,000 feet. At the first glance, when it is known the great length of the stream, from its discharge into the Gulf of Mexico to its remotest sources, so moderate an elevation of the latter may appear too limited; but 3,000 feet would demand very nearly a foot per mile, an enormous descent, much

more than double that ordinarily found in rivers. In the foregoing estimate, the absolute height of peaks, or even ridges, are not taken into account.

It has often excited astonishment in those who knew the extent, without duly attending to the structure of the Mississippi basin, that the entire Delta is not annually submerged. We now proceed to investigate the causes of the long continuance, and in common years, the moderate elevation of the Mississippi floods. Recurrence to a good map will render intelligible what is to follow, and obvious, that the peculiar structure and relative position of the respective valleys which compose this great basin, are the true causes which prolong the duration, and mitigate the height of the annual inundation.

In conducting this review, we may consider the basin subdivided into the four valleys already noticed; that of Ohio, Mississippi proper, Missouri, and Lower Mississippi. The relative extent of each has been determined, and the principal streams noticed. If we were to turn an attentive eye to a map of those four sections, and unaided by a single fact drawn from actual observation, it would follow from theory, from its more southern position, and from its length extending east and west, that the valley of the Lower Mississippi must first discharge its waters; the Ohio valley would follow; Upper Mississippi would succeed to Ohio; and lastly, would issue the discharge of Missouri, or largest subdivision of the basin; such are indeed the facts.

It would also be evident from inspection, that of every valley taken separately, nature opposes insurmountable obstacles to a simultaneous discharge. Red and Arkansaw rivers flow nearly parallel through 14 degrees of longitude, and yet in every year the discharge of the former precedes that of the latter nearly a month. Red river is the true North American Nile, though on a smaller scale. That title has been bestowed on the Mississippi with unparalleled absurdity. Except in the single circumstance of each protruding a Delta at their respective mouths, no two rivers could possibly present more contrasted features than does the Mississippi and Nile. In fact, except in one circumstance, very little resemblance exists even between the Nile and Red river: the Nile in common years has only one flood, Red river has often two; but the floods of the Nile are discharged by regular rise and as regular depression, which is eminently the case with Red river; a cir-

cumstance which, in a very striking manner, distinguishes both from the Mississippi, which rises and falls by pulsation, if such a term is admissible.

Near the north-west angle of Louisiana, a chain of lakes commences on both shores of Red river, which continue to skirt that stream upwards of 100 miles. The writer of this article examined these lakes, and found them to be evidently formed in the ancient channels and adjacent low grounds of considerable water-courses, the discharge of which into Red river, has been gradually impeded by a natural embankment, formed by the sediment brought down by that river. These lakes as they now exist, are from four or five, to thirty miles in length, and from one quarter to three miles wide, and are filled and emptied alternately, as the floods of Red river rise and fall: they are in fact real reservoirs, which in the rise of Red river receives great part of its surplus water, and as the river depresses discharge that surplus slowly, tending very greatly to mitigate the rapid emission of the Red river flood on the Delta. As far as the writer is informed, this feature is peculiar to Red river, and distinguishes that stream from every other.

Red river, like the Mississippi, has a flood in autumn; but what may be denominated the annual inundation of that river, reaches the Delta in February, and continues through March and April.

The efflux of Arkansaw uniformly succeeds that of Red river; but from the greater length of course, extent it drains, and also from the more northerly and mountainous country from which its remote sources are drawn, the volume of the former very greatly exceeds that of the latter; though from different causes, both rivers are alike in yielding their waters by a slow and regular discharge. The great mass of the flood of Arkansaw reaches the Delta in March and April, and is therefore simultaneous with the latter part of that of Red river. White river, in strictness, forms part of the Arkansaw tide, and flows out with the first flux of the latter stream.

We may here observe, that all the rivers of the Mississippi basin, above, North lat. 37, are liable to be annually frozen. The Mississippi, at St. Louis, is three years in five passable on the ice with loaded carriages, by the first week in January. The Ohio, in an equal latitude, is not so soon frozen, though the cold is equally intense on the latter, as on the former river. The causes are obvious which produce this apparent anomaly. The waters of the Mississippi,

flowing from high latitude, are cooled almost to the point of congelation, when they arrive at the junction of the Mississippi and Missouri; whilst those of Ohio, in the latitude of St. Louis, flowing nearly from east to west, demand a longer exposure to frost to become frozen. The gradual melting of the ice and snow above the latitude assumed, that of 57, is another very controlling cause of the slow emission of the general flood.

The Ohio valley, from its compact form, greater comparative descent, and from the medium climate in which it is situated, emits its waters with more irregularity than any stream in the Mississippi basin. The Ohio tide of flood occurs from November until March, inclusive, though perhaps four years in five, this river yields the principal discharge in the latter month. The floods of this valley are more sudden in their rise, and more impetuous in their discharge, than that of any section of the Mississippi basin. The main tide of Ohio reaches the Delta in May. The various streams are, however, so relatively, placed, as to render a simultaneous discharge impossible. The effect, therefore, of this river, in producing an augmentation of the floods which inundate the Delta, is much lessened in its operation.

The Mississippi proper is still more disadvantageously situated, to admit a rapid emission of its waters than the Ohio. Flowing nearly in a north and south direction, and through so great a range as nine degrees of latitude, the more southern confluent must be very much exhausted before those towards the source are relieved from fetters of ice. The great body of the Mississippi tide is, however, coeval with that of Ohio.

It is the accumulation of the waters of the three valleys we have surveyed, and those of the Kanes and Osage branches of the Missouri, which produce what is known as the annual Mississippi inundation. This flood, nine years in ten, reaches the highest point of its elevation at Natchez, between the 10th and 20th of June. Few instances occur in a long succession of years, in which the waters at that city have not commenced their depression by the first week of July. And yet, the heaviest mass afforded by the largest natural section, has not yet reached the Delta.

Powerful as are the causes which combine to prolong the discharge of the enormous body of waters contained in the three sections of the Mississippi basin we have examined, none contain such controlling impediments to an ag-

gregated and sudden emission, as does the Missouri valley above the Platte inclusive.

The Yellow Stone and Missouri spread their sources through seven degrees of latitude, and, assuming a general course of north east, unite their waters above North lat. 48°, turn to the east and south-east, and finally assume, at the Mandan villages, a southern course, after having flown through eleven degrees of longitude. The Platte pursues a general course from west to east, above North lat. 40°, and flows through 14 degrees of longitude. It must be obvious, from what has been shown in this article, or by inspection of a good map, that the higher branches of Missouri must remain frozen, long after those more southward have commenced their rise, and nearly as late as the period of high tide on the Delta. The mean motion of the entire mass of water, in any of the confluent of the Mississippi, does not much, if any, exceed one mile per hour; therefore, between three and four months are necessary for the passage of water from the extreme sources of the Missouri to the Delta of the Mississippi; consequently, though those waters commence their rise in May, they do not frequently reach the Delta until late in July, or early in August, of course at a period when the main spring and summer inundation is very greatly abated, and the water retired within the banks of the Mississippi river.

Though the period of flood is well known to the inhabitants of the Delta, and in common years can be calculated within a few days, such is the inequality of the seasons over the whole basin, that no length of experience gives much aid in estimating the probable elevation or quantity. In 1800, and in 1801, the waters of the Mississippi at Natchez did not attain the height of the banks.

The Delta commences at the mouth of Red River, or, more correctly, at the efflux of the Atchafalaya. At this place is a gorge, through which the overwhelming mass of surplus water is confined to within three miles; but by the channel of Atchafalaya, a very large quantity flows out to the right from the main stream, never again to return. One hundred and twenty miles lower, flows from the left, the Manchac or Iberville. These two streams, the Atchafalaya and Iberville, bound the Delta, and below their efflux respectively, no water which flows from the Mississippi ever returns; nor are there any bodies of arable land, except upon the immediate banks of the water courses; all beyond, is either liable to annual overflow, or morass.

We have now included as much of general observation upon the Mississippi basin, as is compatible with the necessary brevity of this treatise, and will therefore conclude our review of that subject with a few reflections upon the Delta.

It is evident from either actual view or inspection on a map, that all the space I have designated as within the Delta must have been formed by alluvial deposit; but from that physical fact many conclusions have been drawn, unsupported by the laws of nature or the geographical physiogony of the country.

It is a common belief that the Mississippi frequently changes its bed, and that it flows upon a comparative ridge. Neither of those opinions are correct; the bed of the Mississippi, like that of all rivers, is the deepest valley of the country through which it flows. As high up as the efflux of La Fourche it is 130 feet deep at low water, and 75 or 80 at Natchez. At New Orleans the depth exceeds one hundred feet. The deepest lakes, in the whole adjacent country, do not exceed 18 or 20 feet, and the very small depression of their surface below that of the Mississippi, shown by the tides, will leave the bottom of the river upwards of one hundred feet below that of any other water course or lake in the Delta. When the Mississippi is reduced to its lowest point of depression, water ceases to flow into the Atchafalaya, Iberville, and Plaquemine; and instances have occurred when the same circumstances took place with the Fourche; and yet, as I before remarked, at the very lowest stage of its depression the Mississippi water, even as high as La Fourche, is 120 feet deep; therefore to desert its channel, that great river must quit a bed of upwards of two thousand six hundred feet wide, and one hundred and twenty feet in depth below the lowest of its outlets, and about one hundred and forty feet below the general level of the Delta.

It remains for me to show the causes of the ordinary misconception, that the Mississippi does desert its channel. A glance of an eye upon a good map, will exhibit the sweeping bends of that great river. In an alluvial soil the current, where it strikes against one side of the river, wears away a portion of the bank, and deposits it upon the opposite shore. This enlarged section shows the nature of those currents, which are thrown by the points into the bends, or more correctly from the convex to the concave side of the stream. The consequence is that the decrement of the banks is

from the bends, and the increment to the points, or rather a little below. If by a large curve of the river two bends approach each other, the intervening isthmus or neck may be worn through by the current, and the river thrown into the new channel. This was the case in three places, since Louisiana was settled by the French; at the mouth of the Yazoo, at that of the Homochitto, and at Point Coupee. The latter name is derived from the circumstance. The former bed of the river, now lakes, have in every other respect except current, a perfect resemblance to the curves of the Mississippi. Besides those lakes, thus formed within the reach of history, several others exist near the Mississippi to attest the still more ancient revolutions of that stream. Such are, Lake Concordia, opposite Natchez; Lake St. John, a few miles above; Lake St. Joseph, opposite the mouth of the Big Black river; Lake Providence, opposite Stack Island; and Grand Lake, immediately above the north line of Louisiana, upon N lat. 33 0.

Of these eight lakes, all are on the right side, except one at the mouth of Yazoo, and one at that of the Homochitto, and all have, as I before observed, the most exact resemblance to sections of the Mississippi.

Receding from that stream beyond the limits of these, the other lakes, within or above the Delta, assume a totally different appearance, and have the irregular form of similar bodies of water in other places. Those near the present bed of the Mississippi, are monuments attesting the antiquity of that bed. Combining therefore, the depth of the main river, with the general features of the Delta, and other alluvial tracts above, the conclusion is inevitable, that this great river flows in a channel, from which, with the exceptions stated, its waters cannot find another outlet to their general recipient, more easily than any other given river, the Hudson, Delaware, or Susquehannah, for instance.

We must close these already lengthened observations on the Delta of the Mississippi, by a few general remarks upon that stream.

I have already expressed my opinion, that the velocity of the water of that river and of its confluent was overrated. I have formed that conclusion from actual observation, but it may be supported by collateral facts. If any vessel is put in motion, say a steam-boat, in stagnant water, and its rate of going ascertained, that rate must, as a matter of course, exactly counterbalance a current of equal rapidity. Therefore, if a steam-boat could move six miles per hour in still water, it would move one

mile per hour in a current having a velocity of five miles per hour. It is very commonly and very confidently asserted, that the Mississippi moves four or five miles per hour during the time of high water, and yet steam-boats are known to be propelled against its current three or four miles per hour. If these two motions are added together, we have nine, ten, or twelve miles per hour in still water for these vessels. I have been much in steam-boats in the most favourable situations, and when aided by wind, tide and steam, ten miles was the greatest distance I ever knew performed in one hour by any of these vessels. Six is I believe, in calm weather, and stagnant water, very nearly their mean rate of motion.

If this latter supposition is correct, and steam-boats are propelled up the Mississippi at the rate of four miles per hour, it will leave two miles per hour for the mean motion of the upper current or surface of the Mississippi river, coinciding very nearly with what I have before stated. This two miles per hour, must however, be considered as the velocity of the upper part of the volume of water, and is, I have no doubt, more than double that of the entire mass.

Mississippi, state of the United States, having the Mississippi and Pearl rivers on the west; the 35th degree of North lat. or the state of Tennessee, north; the state of Alabama on the east; and the Gulf of Mexico, and North lat. 31°, or Louisiana, on the south. The outlines of this state are :

The remarkable resemblance in form and

geographical position, between the states of Alabama and Mississippi, is obvious on a first glance on their connected maps. In addition to every other point of similitude, both have a prolongation towards the Gulf of Mexico, below North lat. 31 0, of nearly equal area and extent on that gulf.

Of the rivers of the state of Mississippi, that stream from which the name of the state is derived, claims the first rank.

The Mississippi washes the state from North lat. 31° to 35°, a distance, following the stream, of 530 miles. The features of the Mississippi have been so amply noticed under the preceding head, that no further notice respecting it is necessary in this place.

Next in magnitude and importance amongst the rivers of this state, is the Pearl. This stream rises in the state, about North lat. 33 0, and flowing in a general course nearly south, flows into the Rigolets between Lakes Borgne and Pontchartrain, at North lat. 30 10, after an entire comparative course of about 200 miles. From North lat. 31 0 to its mouth, the Pearl forms part of the boundary between the states of Louisiana and Mississippi.

The Pascagoula rises in the state of Mississippi, about North lat. 32 40, flows in a southern course to North lat. 30 20, falls into the Gulf of Mexico after a comparative course of about 150 miles. The main branch of Pascagoula is known by the name of Chickasaw bay, as far down as five miles south of North lat. 31 0, where it forms a junction with the north-west branch, the Leaf river, and from thence to the final discharge takes the name of Pascagoula.

Some streams, but of small note, enter the bay of St. Louis between the Pearl and Pascagoula rivers.

The sources of the Amite, Tickfoha, Tangipao, and Bogue Chito rivers are in the state of Mississippi.

Flowing into the Mississippi, are the Buffalo, Homochitto, Big Black, and Yazoo rivers. Of these latter streams, in point of magnitude, the first rank is due to the latter. This river has its source near the southern boundary of Tennessee, interlocking with the head waters of Tombigbee. The Yazoo enters the Mississippi at North lat. 32 30, after a comparative course of about 200 miles.

Big Black rises about North lat. 33 0, between the sources of the Pearl and the Yazoo, flows south-west 150 miles, and falls into the Mississippi at the Grand Gulf, North lat. 32 5.

Between the Big Black and Homochitto; the Mississippi river receives the water of Bayou Pierre, Coles creek, and St. Catherine creek; these creeks are comparatively small, but important from their position,

and the excellence of the land they drain. The city of Natchez, though so near the bank of the Mississippi, is situated on a branch of St. Catherine creek, which has its discharge 15 miles below.

The Homochitto river rises about 50 miles north-east from Natchez; flows south-west about 100 miles; enters the Mississippi at North lat. 31 12.

The Buffalo is rather a creek than a river, not having a course of more than 25 or 30 miles. This stream rises in Amite, and flows west through Wilkinson county, and falls into the Mississippi two miles above Loftus Heights.

The Tennessee river forms a part of the boundary of the state of Mississippi, from the mouth of Bear creek to the Tennessee line, at North lat. 35 0 about 20 miles, and ought consequently to be classed as one of the rivers of the state.

We have already observed, that the sources of the Tombigbee were in the state of Mississippi. The sources of Tombigbee rise near the Tennessee line, flow to the south-east, and enter the state of Alabama at about North lat. 33 30.

The state of Mississippi has a very confined and incommensurable sea coast, of 80 miles in extent. In this distance, the Pascagoula is the only inlet by which vessels of the smallest size can enter, and in that only schooners of small draught, at high water, can reach the junction of Chickisawhay and Leaf rivers. The Pearl admits no navigation worth mention; and the bay of St. Louis is a mere indentation of the coast, of no practical use in a commercial point of view.

The Mississippi river is the great harbour and outlet of the state.

The state of Mississippi is naturally divided into four grand divisions of soil. The islands in Lake Borgne, and the Gulf of Mexico; Pine Forest; Mississippi, and other river alluvion; and the Mississippi Bluffs.

Advancing from south to north, first occurs a chain of low sandy islands, lying about six or seven miles from the main shore; their names are, ranging from west to east, the group of the Malheureux (unfortunate) Islands; Mary Anne, Cat, Ship, Dog, Horn, and Petite Bois islands.

The opposing shore, once a part of West Florida, is a level pine forest to the water edge; constituting the second, and by far most extensive superficies of soil in the state. Receding from the shores of the gulf, inland, the face of the country imperceptibly swells into hills; and though no part of the state rises into elevations that can be designated mountains, much of its surface is extremely broken.

Next in extent to the Pine Forest land, is the range called the Mississippi Bluffs;

and lastly, the more confined, but greatly most valuable land, where found above annual overflow, river alluvion. Of these three latter divisions of soil in order.

As we have already observed, the Pine Forests reaches the waters of the Gulf of Mexico; and we may add, extend in the intervals between the streams, to the northern extremity of the state. This species of soil, deriving its title from the principal timber it produces, in most places gradually mingles with the river alluvion, or Mississippi Bluffs, and produces an intermediate soil partaking of the qualities of both; and on which oak, ash, hickory, dogwood, sweet gum, and other trees, intermingle with the pine. This mixed soil and timber is known in the country by the name of interval land, and is often found very productive. The pine lands have hitherto been considered extremely sterile; how far future modes of culture, or artificial means, may tend to meliorate this species of soil, remains an undecided problem.

In the northern parts of the state of Mississippi, towards Tennessee, the pine woods are frequently interrupted by a species of prairie, or rather barrens, on which grow, shrub oak, and other dwarf bushes; but the soil continues to exhibit the unproductive character of that of the pine woods.

It would not be hazarding much, to estimate the extent of these barren tracts at two-thirds of the entire area of the state.

In all the length of the state of Mississippi, from North lat. 31° to 35°, a range of bluffs extend. These bluffs reach, and are washed by the Mississippi in a few places only. Immediately above North lat. 31 0, rises the highest of these bluffs, known by the name of Loftus Heights, which skirt the river four or five miles. A very large curve of the Mississippi, to the west, leaves an extensive overflown tract along the right bank, as high as Ellis's Cliffs, where, by an eastern curve of the river, the bluffs are again washed by the stream; which is also the case at the city of Natchez. Above the latter place, the bluffs and river do not again come in contact below the Grand Gulf at the mouth of the Big Black river. The Bluffs again reach the stream at Walnut Hills, below the mouth of the Yazoo, and at the Chickisaw Bluffs, immediately at the north-west angle of the state.

These bluffs are the mere extension of the comparatively elevated surface of the state of Mississippi over the low grounds of the river of the same name.

When the waters are low, it is found that the bluffs are underlaid by a crude concrete of sand and pebbles, held in mass by an oxide of iron; the whole, no doubt, resting on a secondary base.

The elevation of the bluffs vary, but about 100 feet mean height would not be a serious departure from fact. They are cut into hills by the abrasion of water of the numerous streams which flow from the pine woods in the interior.

What renders these bluffs and hills objects of peculiar interest, is the quality of the soil, which is in almost all places good, and in many exuberantly fertile. Receding from the bluffs, the pine forests imperceptibly encroach, and in some places, at a more or less distance from the river, say in a direct line from fifteen to twenty miles, closes the productive border.

The foregoing limit is taken in general; many of the water-courses have fertile tracts on their banks, farther into the interior of the state; but the latter description of land belongs more particularly to river alluvion, than to the soil of the bluffs or hills.

The soil of the bluffs and hills is a rich loam, resting on clay; and digging wells has disclosed the fact, that the general substratum to the clay is loose sand.

The whole of this fine border of soil, in a state of nature, is covered with a very dense forest, with an underwood of reed cane, the *Arundo gigantea*, many species of vitis, smilax, and other climbers, and an infinite variety of more humble vegetable.

A mere list of the most prevalent timber trees will serve to demonstrate the fertility of this tract; these are,

Black oak, white oak, Spanish oak, black jack oak, willow oak, wild cherry, sweet gum, poplar, large laurel, beech, fagus pumila, here a tree often forty feet in height, and eight or ten inches in diameter; black locust, mulberry, persimon, honey locust, black gum, cotton wood, linden, mucilaginous elm, sassafras, sycamore, ash, black walnut, bitternut hickory, nutmeg hickory, and red flowering maple.

Of more humble trees and shrubs, and other vegetables, the following are most indicative of fertility of soil; papaw, dogwood, spicewood, Spanish mulberry, buckeye, poke, blackberry, muscadine, and reed cane.

It would swell this article to too great length, to give a mere list of the most interesting vegetable productions of the fine tract under review; the foregoing are inserted as illustrative of its natural fertility.

When compared with the entire area of the state, the productive tract before us is confined in extent; but when we turn our attention to the exotic vegetables which are, or can be produced within its limits, the intrinsic value of the land is rendered apparent.

Indigo, tobacco, and cotton, have in turn

been cultivated as staples, and produced in great abundance: the latter has for more than twenty-five years past superseded the two former, and will, in all human probability, continue the great staple of this part of the United States.

Much speculation has been made upon the quantity of cotton which is, or can be produced per acre, upon the bluff lands. The writer of this article, from some personal experience, will undertake to assume 250 pounds of clean cotton as about an average crop.

To cotton, indigo, and tobacco, may be added, as the exotic plants cultivated in the state of Mississippi, Indian corn, (zea maize,) oats; and, where the inhabitants choose, wheat may be produced; but the culture of that grain is seldom attempted. Most garden plants grow luxuriantly, though good gardens are rare. That species of potato, the tuberous rooted solanum, commonly called Irish potato, is cultivated, but does not succeed so well, either as to quantity or quality, as the same vegetable does farther northward. The sweet potato (*convolvus batatas* of Muhlenberg) is produced in the utmost abundance.

Of cultivated fruits, the principal are the apple, peach, and fig; the latter, below N lat. 32°, seems to flourish as if natural to the climate. The plum, nectarine, apricot, &c. are cultivated, but not extensively.

Like all the southern states of the United States, meadows cannot be correctly said to exist in the state of Mississippi.

Though the winters are in general mild, the seasons are extremely variable. Frequently frosts occur of sufficient severity to destroy cotton, indigo, tobacco, and other tender plants, as early as the first week in October; whilst, perhaps in the next season, the flowers of the same vegetables will be found blooming in December, and even in January, as was the case in 1805.

No winter, however, passes without frost, and very few without snow, at Natchez. In December, 1800, the thermometer of Fahrenheit fell to 12, five miles S of Natchez; and often since that period, the cold has been nearly, if not altogether, as intense. This casual severity prevents, to the utmost southern extremity of the state, the cultivation of either sugar cane or the orange tree; vegetables which are, in fact, confined in the Delta of the Mississippi to a latitude S of most parts of the state of Mississippi.

The bluff lands are followed by the river alluvion, which, though less in quantity, is still more productive, where above annual or casual overflow. From the bluffs confining, and of consequence causing the accumulation of the surplus water of the Mis-

Mississippi in the spring and summer, there exists less arable soil on the left bank of the Mississippi river, in the state of that name, than on the right bank in Arkansas territory, and in Louisiana. Some very wealthy settlements on the left bank do, however exist, with a soil possessing the usual fertility of the Mississippi banks. The arable border varies from half a mile to 200 yards, and is every where terminated in the rear by overflowed grounds, submerged annually from one to ten or twelve feet.

The natural growth on the river arable border is, in general, sweet gum, different species of oak, ash, and hickory, hackberry, sycamore, &c. with an under-growth of reed cane, and below N lat. 31° 30', the palmetto. In the overgrown swamps, the principal timber is cypress, tupelo, different species of oak and hickory, maple, sweet gum, and ash. On all other water-courses in the state, more or less alluvion occurs; but in all places is confined in extent, and on the streams in the interior, often merges into the interval land or pine forest.

Taken together, the bluff lands and river alluvion amount to about 5560 square miles, equal to 3,558,400 acres. The bluff lands extend from N lat. 31° to 35°, with more or less width, as the rivers intervene.

Confined as the two foregoing tracts of land are, when compared to the area of the state, of which they form a part, they nevertheless form, in the aggregate, the most extensive continuous tract of productive soil in the United States, S of N lat. 35°; and when its fertility and local advantages are taken into view, it is hazarding no violence to truth, to estimate this region as one of the most valuable in the United States.

The country near Natchez was settled by the French in 1718, and Fort Rosalie built on the bluff, within the now incorporated limits of that city. The first French colony was mas-acred by the savages, in 1729, and the country remained uninhabited by the whites many years afterwards.

In 1763, Natchez, then considered a part of West Florida, was ceded by Spain to Great Britain, who retained possession until 1781, when that place and all West Florida was conquered by the Spaniards under Governor Bernardo Galvez; and, by the treaty of Paris, West Florida was confirmed to Spain. As the limits of the British and French colonies, and afterwards those between the British and Spanish colonies, had never been fixed, the Spanish authorities held Natchez and the adjacent country as an appendage of Florida until 1793, when the city and country were evacuated by the officers and troops of Spain, and the

United States' commissioners took full possession. In 1799, the line of demarkation was completed, and the boundary fixed, which now separates the states of Louisiana and Mississippi, between the Mississippi and Pearl rivers.

April 7th, 1798, an act of Congress was passed, authorizing the President of the United States to appoint commissioners to adjust the limits of the territory W of the Chatahooche river.

May 10th, an act was passed for the organization of a government, and the territory named "The Mississippi Territory."

June 9th, 1808, an act passed, admitting a delegate from the Mississippi Territory in Congress.

June 17th, the assent of Georgia demanded, for the formation of two states out of the Mississippi Territory. This demand was subsequently acceded to by Georgia.

January 21st, 1815, a petition from the legislature of the Mississippi Territory laid before Congress, praying admission into the Union on the same footing with the original states. A committee of Congress reported on this petition favourably, December, 1816.

A law was passed in consequence, March 1st, 1817, authorizing the call of a Convention, which was called, and met July, 1817, accepted the terms proposed by Congress, framed a constitution, August 15th, which was accepted by Congress in December following; and the state of Mississippi assumed her station as a member of the United States. Since the period of admission, no event of consequence, in a general view, has taken place in this state.

The appropriated and inhabited part of Mississippi, at the epoch of taking the last census, (1820) was subdivided into the following counties:

<i>Counties.</i>	<i>Inhabitants.</i>	<i>Sq. miles.</i>	<i>To sq. mile.</i>
Adams,	12,073	480	26
Amite,	6,855	960	7

Total	75,448	12,720	5

The only parts of Mississippi on which an adequate comparative population has yet been formed, is confined to a strip of about 100 miles along the margin of the Mississippi river, and extending to about a mean of thirty miles wide inland. This will embrace all the five river counties, Warren, Claiborne, Jefferson, Adams, and Wilkinson, and the best peopled parts of Amite, and Franklin counties; and will include about 42,600 inhabitants, on this river section of the state, or about 14 to the square mile. Deducting 42,600, from 75,448, will leave 32,848, for the residue of that part of Mississippi included in the foregoing estimate. This exhibits a space of 9,720 square miles, inhabited by 32,848 persons, or a small excess above three to the square mile. The inhabited Mississippi river section of this state, lies between lat. 31 and 32 30 N. The inland, or more correctly south-eastern section, lies between lat. 30 10, and 31 52 N.

Cotton is the general staple.

By the census of 1820, the population of Mississippi was found composed of 42,176 whites, 32,814 slaves, and 458 coloured persons, and classed thus:

Engaged in Agriculture	-	22,033
do. in Manufactures	-	650
do. in Commerce	-	294

Mississippi was admitted into the Union, as a state, December, 1817.

Missouri River. See article *Mississippi River*; section. Valley of Missouri above its junction with the Mississippi.

Missouri State of, one of the United States, bounded north-east and south-east by the Mississippi river; south by the territory of Arkansas; and west and north by the western unappropriated territory of the United States, formerly a part of Louisiana.

The limits of Missouri are :

Beginning on the left bank of the Mississippi river at the mouth of Lemoine river, and thence down the former stream to where it is intersected by North lat. 36°,	550
Thence due west, along North lat. 36°, to the right bank of St. Francis river,	50
Thence up St. Francis to a point where that river is intersected by North lat. 36 30,	50
Thence due west, along the territory of Arkansas, to a point where a meridian line, drawn from the junction of the Missouri and Kansas rivers, will intersect North lat. 36 30,	200
Thence due north to a point, where a line extended due west from the Sac Village, on Lemoine river	

will intersect the west boundary,	-	-	-	-	275
Thence due east to the Lemoine river,	-	-	-	-	130
Thence down the Lemoine river to the place of beginning,	-	-	-	-	20
					1,272

Area within a trifling fraction of 63,000 square miles, equal to 40,320,000 acres. Mean length from north to south, 280 miles; mean breadth from east to west, 220 miles. Extreme south, North lat. 36°. Extreme north, North lat. 40 36.

Missouri, in point of extent, is the third state of the United States, and only falls below Virginia and Georgia.

Though part of this state is hilly, and some of the hills approach in elevation the dignity of mountains, yet strictly speaking, no mountains, either in detached grounds or chains, exist within the limits of the state.

For every object of human affairs, rivers are the most important features of an inland country, and few regions of the earth, of equal extent, can compare with Missouri in the magnitude, number, and navigable facilities of its rivers.

Of these, the first in order is the Mississippi and Missouri, both of which have been already to amply noticed in our description of the Mississippi basin, that no further account of them is necessary in this place.

The Lemoine river, though for a few mils forming part of the boundary, can scarcely be called a river of Missouri. The Osage, rising in the territory of Arkansas, and flowing north-east into the Missouri, is the most important confluent of that river in the state of Missouri. The Osage has its mouth near the centre of the state, where the future seat of government is intended to be placed. The Osage is a large navigable stream in all its length in the state, and waters soon excellent, and much good land.

Besides the foregoing large stream, the Missouri receives from the right below the mouth of the Kansas, Blue Water, Gasconade, and some smaller streams; and from the left, Grande, Charlaton, God W. man's, Great Mariton, Otter, and Charette rivers. The Merrimack enters the Mississippi 18 miles below St. Louis, but has been noticed, as have been White and St. Francis rivers, which closes the list of the stream of the state of Missouri.

The position of Missouri is in a high degree favourable to commerce, popula-

tion, and wealth. Extending four and a half degrees of latitude, its temperature must vary considerably, if uninfluenced by any other cause than mere geographic extent. This is not, however, the case, as will soon appear.

In conducting this general survey, I have endeavoured, in a particular manner, to delineate those features which influence the meteorological phenomena, and the temperature of the seasons, and also to point out the great outlines of soil. In respect to Missouri, it will be necessary to deviate from the strict observance of the plan pursued in describing the state of Mississippi. Instead, therefore, of dividing the former state into its natural sections, in relation to soil, we will take each of its river districts by itself.

We have seen that the river Mississippi washes Missouri on its north-east and south-east frontier, 550 miles, following the meanders, though, by comparative course, the distance along the Mississippi would not exceed 350 miles. Though the mere banks of the Mississippi preserve a nearly uniform character in all their extent along the front of Missouri, yet, from difference of climate, the vegetable productions are very different at the two extremes. So much has already been said on the features and quality of the alluvial margins of the Mississippi, that it is needless to amplify on the subject.

Ascending the Mississippi from its mouth, no eminence is to be found on its western bank in a distance of upwards of 1000 miles. Twenty-eight miles above the junction of Mississippi and Ohio, occurs the first rocky bluff on the right bank. It is composed of an enormous projecting precipice of limestone, whose real height above the water, has never been very satisfactorily determined. This ledge is, no doubt, a continuation of the great limestone formation of the Ohio valley. In Missouri, it is a part of a ridge of hills which continues from this point westward, through the state, and ranges between the waters of Arkansaw, and those of Osage and Kanes rivers, perhaps to the Chappewan mountains. This ridge divides Missouri into two very distinct climates. In the south-eastern part of the state, along the Mississippi river, the cotton plant is cultivated, though only for family use; as an object of commerce, it offers no great advantage: but, above the ridge in question, that plant ceases, and a region commences favourable to the production of the cereal gramma.

Near the Mississippi, below the lime-

stone ridge, the banks are in every respect similar to what they have been described in Louisiana. The rear lands, as far as the St. Francis, are analogous to grounds similarly placed, in all the distance from the limestone range to the sea marsh,

The St. Francis rises partly in the hills of the limestone ridge, and in part from the drain of the Mississippi. The north eastern branch of that stream appears to have been formed from an ancient outlet of the Mississippi, and to have contained a volume of water much larger than passes by its channel at present. The ordinary distance between the two rivers is about 50 miles, flowing nearly parallel from North lat. 37° to North lat. $34^{\circ}30'$, where the St. Francis, by a gradual curve towards the lower part of its course, joins the Mississippi. The north-western branch rises near North lat. 38° , in a very hilly, broken, rocky, and barren tract of country. There are some good lands, but in no quantity commensurate with the extent drained by this river, whose whole length, by comparative course, is 250 miles, one half in Missouri, and the other in Arkansaw. Extensive settlements have been made on the sources of the St. Francis and its tributaries. According to the very respectable testimony of Mr. Schoolcraft, from personal observation, the country from which the western, or rather north-western sources of St. Francis flows, is primitive composed of granite, gneiss, and other congenerate rocks; amongst which are situated one of the richest iron, and the most abundant lead mines on the globe. The geological notices of Mr. Schoolcraft deserve the utmost attention; because made by a professed mineralogist, and a man who visited the region to collect facts, and not to support any preconceived theory. This gentleman has been, it must be acknowledged, much too general on a fact so important as the existence of a primitive region west of the Mississippi, and so near that stream. He has, however, enriched our literature with by far the best account extant of the mineral resources of Missouri, and very correct, though brief notices of its soil and vegetable productions.

Black river, the north fork of White river, rises in the south-western part of Missouri, by a number of branches, of which Strawberry river, Spring river, and Currents river, are the principal. The sources of Black river are in the ridge of hills, or rather mountains, which has been already noticed. The base of country drained by Black river is calcu-

reous, consequently the soil is very productive. The climate, as to temperature, is in no respect essentially different from that of St. Francis. The former, from superior elevation and more exemption from stagnant water, is no doubt much more salubrious than the latter. Like all calcareous regions, that of Black river affords some very large fountains of water, from one of which Spring river takes its name. The surface watered by Black river is about 8000 square miles. The timber is extremely large and varied. On the streams, cotton wood, different species of hickory, oak, and elm, prevail. The sugar maple is found, but the climate is rather too far south for the profitable extraction of its sap. The *Liriodendron tulipifera* is also found in this section of country of an enormous growth. Oak is, however, the prevailing tree on the waters of Black river. Like Tennessee, and the southern parts of Kentucky the vegetation of the southern section of Missouri partakes of the specific variety of the northern and southern extremity of the United States. Cotton is cultivated, but rather for domestic use than as a commercial staple. The cereal gramina produce abundantly: though, on the verge of the prairie country, Black river drains a very dense forest. In fine, that part of Missouri, south of the ridge we have alluded to, and watered by St. Francis, Black, and Mississippi rivers, may be with propriety considered as naturally connected with the Arkansaw basin, though politically included in Missouri. The ridge is generally clothed with pine, the soil sandy, and extremely sterile. It in fact divides the state into two unequal zones, of very different temperature.

The Merrimack rises near the centre of the state; has its source in the dividing ridge, though its course is nearly east along its northern slope. The length of the Merrimack is not above 120 miles, comparative course. Its sources are in a sterile pine forest, and most of its banks partake the character of the soil from which it flows. It is an unimportant stream in either a geographical or agricultural point of view, though in respect to mineral wealth, one of the most remarkable in the United States.

The mine tract, according to Mr. Schoolcraft, the best authority on the subject, extends in length from the head waters of St. Francis, in a north-west direction, to the Merrimack, a distance of seventy miles, and from the Mississippi in a south-west direction, to the Fourche à Courtois, a distance of about forty-five miles, and covering an area of 3150 square miles. The

same author remarks, that it is not in every section of it that lead is to be traced, and he describes the mineral character of the soil, rocks, and other fossil bodies of this tract, as subject to so much variety, as to render indications of ore difficult to reduce to any safe result. The aspect of the country is sterile, hilly, and in many places precipitous. Many highland barrens, level but sterile, checker the mine district. The soil in general is a reddish coloured, hard, stiff clay, admixed with much siliceous gravel. Nodules of iron-ore and pyrites are frequent. The mineral hills are covered in most places by a stunted growth of oaks, principally the post oak, the *quercus obtusiloba* of Michaux. A line of pine separates the sources of St. Francis from those of Merrimack, and passes through the mine tract in a direction from north-west to south-east. Though in general the soil of this tract is unproductive, the banks of some of its streams are very favourable exceptions. This fact is elucidated by the forest trees found on this alluvial soil; which are, sycamore, elm, cotton-wood, walnut, maple, buckeye, hackberry, ash, papaw, spicewood, and other trees and shrubbery, indicative of fertile land. Mr. Schoolcraft mentions a fact, of which, from the accompany remarks, he seems not to have understood the cause. He observes, that around many of the mines, the earth, thrown out and raised from great depths, produces trees and shrubs which are not peculiar to the surface, and instances the cotton-wood, or poplar, and beech-grapes, the *vitis riparia*, I presume. He states, that he frequently saw those vegetables growing near old diggings, where the earth had been raised thirty or forty feet, and where, previous to those diggings, no such trees or vines existed. It is well known to botanists, that the seeds of many, perhaps most plants, if buried at great depths in the earth, will retain their vegetable organization for countless ages. The indestructibility of the seeds of plants is, indeed, one of the most curious subjects of philosophical reflection and research. Mr. Schoolcraft ascribes the cause of the phenomenon to that opprobrium of science, equivocal generation: a supposition at variance with all the laws of analogy, as applied to organized beings. The fact proves unequivocally, that the country has undergone great changes in its external crust, since the vegetables cited deposited their seeds in the soil, now covered by extraneous and very different bodies.

Here, as in every other place where silica forms a large part of the soil, the spring water is clear, cool, and of course wholesome; and being exempt from the causes that produce disease, stagnant water and decaying vegetables, the mine country

is possessed of an atmosphere of the utmost salubrity.

The change of climate between the region watered by Black and St. Francis rivers, and that by Merrimack, is apparent in the vegetables cultivated by the inhabitants of each. On the Merrimack, wheat succeeds extremely well, a fact nowhere perceptible south of the dividing ridge. Wheat, and indeed all the cerealia, may be, it is true, cultivated even in Louisiana; but below the 38th degree of north latitude, wheat, rye, and barley, evince that they are removed from their congenial climates; and in no part of North America, except some of the table land of the great spine of Analinac, or Chippewan, where elevation compensates advance towards or into the tropics, does the cereal gramina, except maize, attain the full development of their growth. And even maize, in Louisiana, Mississippi, and Alabama, does not by any means attain the rich and abundant produce of that grain, as in the Mississippi basin, above North lat. 35 0. The same remark applies in a striking manner to the apple. This most valuable of all tree fruits deteriorates about the same latitude with wheat. The apple, west of the Mississippi, first grows to advantage above the mine district. The peach-tree finds its most congenial air about North lat. 38 0, though it is a fruit possessing in the United States a much wider range than the apple.

The Osage rises about North lat. 37 0, West long. from W C 21 0, and flows east a little north, having a comparative course of 400 miles, one-third of which is in Missouri. This river rises in the great western prairies, and, like every stream of that region, exhibits some very productive, and a large proportion of sterile land. Its meanders are in the lower part of its course very winding, consequently it contains much alluvial soil in proportion to its length, estimated comparatively.

The banks of the Missouri and Mississippi are uniformly in a high degree productive, and contain perhaps one-third of all the valuable arable land of the state. The right shore of the Mississippi is, from Tewapaty bottom to the mouth of the Missouri, in most places, an enormous limestone wall. This distance is about 170 miles. This limestone is merely the buttress of the underlying strata of the interior country. The Mississippi flows in a deep channel, whose sides are elevated near 200 feet above its highest surface. Those precipitous banks are continued in the Missouri. The rich alluvial bottoms are at the base of this limestone precipice, and no doubt derive much of their fertility from the calcareous debris that the abrasion of the waters, in past ages, have worn away and deposited below.

About one-third part of Missouri lies north of Missouri river, and west of Mississippi river. This, in point of soil, is much the best part of the state. It is more uniformly fertile, though less diversified in surface, than the section south of Missouri, and south-west of the Mississippi river. The northern section is also much chequered by small rivers, which generally flow south into Missouri, and though mostly forest land, some extensive and very productive prairies occur. South of Missouri, there exists no medium between the best and worst lands, and similar to all those parts of the United States below the Missouri, and west of the Mississippi, the good soil extends in lines mostly upon the alluvial banks of rivers, or along the margin of prairies, and, consequently, can never admit a dense and scattered population. This is not so much the case with the northern section; the farms will assume in that quarter something of the promiscuous extension over the face of the country, which is characteristic of settlements in the northern and eastern states.

Taken as a whole, Missouri, like most new countries in the United States, has been, as a body of arable land, greatly overrated. As a commercial position, if due allowance is made for its internal situation, the value of this section of our country has never yet been duly appreciated. The truly astonishing assemblage of rivers, which seem to have sought a common centre of union, would indicate St. Louis, or some other place in its vicinity, as the future *entrepot* between widely extended, and far distant portions of our empire. If the pursuits of mankind, and their individual means of subsistence, were exclusively agricultural, Missouri could never, in proportion to territorial extent, possess a population equally dense with New York, Pennsylvania, Ohio, Indiana, or Illinois; but in the complex admixture of employment, and the illimitable transmission of the products of human labour, arising from the improvement of modern manners and arts, population does not depend for its entire subsistence upon the quality of the soil inhabited by any portion of mankind. Commerce and the plastic arts demand, perhaps, as many hands as agriculture. There is, indeed, no employment of human labour, where so great a surplus is produced as that of agriculture; and none, in which the industry of a few will so effectually supply the wants of many. It is for this reason that the density of population must, particularly in such places as Missouri, depend as much, if not more, upon commercial, mining, and manufacturing pursuits, as upon the operations or resources of agriculture. In addition to the apparently inexhaustible stores of lead

ore, some of the most abundant iron mines in the world exist on the Missouri river, and in the interior of the state. In Washington county, Belyue settlement, in addition to lead, says Mr. Schoolcraft, "in the richness of the ore, and extent of the beds or mines, it is no where paralleled. The most noted plane is the iron mountain, where the ore is piled in such enormous masses, as to constitute the entire southern extremity of a lofty ridge, which is elevated 500 or 600 feet above the plain." Water power to work this mass abounds in all directions. It is, however, only one of a number of mines of this really most precious of all metallic bodies, which lie scattered over the sources of St. Francis and Merrimack rivers.

In the same vicinity, and in fact over the entire lead tract, ores of zinc abound, a very interesting fact in the mineralogy of Missouri. Zinc is, when it can be cheaply procured, one of the most useful metals, answering nearly all the purposes, without the destructive qualities of copper. Zinc has been hitherto considered a scarce ore, and should it be found in large bodies in the Mississippi basin, will add a very important article to the resources of that fine region.

The most singular circumstance in the mineralogical history of the interior of North America, is the abundance and extent of the stores of muriate of soda, common salt. Amongst the revolutions effected in the last forty years on the condition of society, there is none more salutary to private convenience than the change in the price of salt in the interior of this continent. I remember when the supply for West Pennsylvania and West Virginia was procured by transportation from the Atlantic slope. At a period when money was at least 100 per cent. above its present value, salt cost in those places five dollars per bushel, at a *minimum* price. It is now manufactured in a great variety of places, where the face of the earth gave few indications of its existence.

There is good reason to believe, that at certain depths, the whole basin of the Mississippi is saturated with salt water; a fact which combined with the abundant existence of limpid fresh water at the surface, is highly consolatory.

Where muriate of soda prevails to such excess, as in some parts of the Spanish internal provinces, the earth becomes uninhabitable, cold, and sterile. This is also the case with part of central Asia. In Europe, salt is procured generally from the sea, or found in substance in mines, as at Guadaloupe in Spain, and more particularly Wieliczka, near Cracow, in Austrian Poland. In North America, this mineral has not been found in solid imbedded masses, though no reasonable doubt can be enter-

tained, but that the bowels of the earth must contain prodigious bodies of that fossil in its crystallized state, in places where it is so very extensively held in solution by water. It may be safely expected, that in some future day, muriate of Soda will be quarried in the Mississippi basin, as in Spain and Poland.

Coal has been mentioned amongst the mineral products of Missouri; but I am unacquainted with any extensive body of that fossil yet brought into use in that state. Mr. Bradbury speaks with enthusiasm of the enormous strata of both coals and iron, which lines many parts of the banks of Missouri; but the coal spoken of by this author is generally above the limits of Missouri.

Many other mineral substances of less value have been discovered in Missouri; but so much of the area of the state remains unsettled, that its mineral and vegetable wealth have only commenced their developement. From what is known much may be expected; few sections of the earth, of equal superficies, and of so recent civilized colonization, have exhibited so rich a variety of mineral resources as southern Missouri.

This state is in a peculiar degree remarkable, as forming the connecting link between the forest and meadow or prairie sections of North America. That enormous forest, which may be remarked as covering the entire Atlantic slope, nine-tenths of St. Lawrence basin, all the basins of Appalachicola and Mobile, and the Delta of the Mississippi, and most parts of the left side of its basin, reaches into Missouri, and covers nearly all its southern and south-eastern sections. This great body of woods is indented in Ohio, Indiana, and Illinois, by a protrusion of the prairies, which expand, advancing south-west, and range through Missouri south of Missouri river. On the west border of that state, on the Osage, and near the junction of the Missouri and Kansas rivers, the prairies usurp much the greater share of the surface of the whole country. Lines of woodland follow the streams, leaving the intermediate spaces open plains. Those lines of timbered ground gradually become more attenuated westward, until nearly one unbroken waste spreads over hundreds of miles. The peninsula between Missouri and Mississippi rivers, though not so naked of timber as are the sources of Arkansas, Kansas, and Platte rivers, yet immense prairies occur on the former region also. Over an extent much more than equal to the inhabited parts of the United States and Canada, the winds of the North, west, and south-west breathe over Missouri, without much impediment from mountains, hills, or forest. It will be seen in the sequel, that

from this exposure arises the peculiarly, variable and cold climate, which prevails near the junction of the Mississippi and Missouri rivers. If due attention is paid to the physiognomy of the adjacent regions, it will at once be seen, that the surface of Missouri is in a peculiar manner liable to extraneous influence. To the south-west, for upwards of twelve hundred miles, expands an open desert. To the west, as known, the extension of the same desert leaves the earth a void. To the north-west, a two-fold cause superinduces a flux of cold air over Missouri. The openness of the immense regions in that direction, and the constant volumes of cold, and often frozen water, brought down by the Mississippi and Missouri rivers. It is from these combined causes that such excessive changes are felt, and inequalities of seasons experienced, to extremes scarcely known in any other spot on this planet. It is from this complicated climate, that in N lat. 38 30, the rivers are frozen, four years in in five, before the end of December. Another phenomenon has been observed in Missouri, which in a striking manner distinguishes its seasons from those of Louisiana or the Atlantic slope; that is, the much less moisture in the atmosphere of the former. Though frosts are so rigorous at St. Louis as to render the Mississippi passable on the ice before the beginning of January in ordinary seasons, yet deep snow or drenching rains are uncommon. The air is commonly dry, cold, and elastic. In reality the position of Missouri, Arkansas, and Louisiana, are singularly worthy of philosophic attention. A dense forest covers all the alluvial bottoms of the Mississippi, and those of its confluent. On the east side of that vast recipient, we have seen this forest only terminated by the Atlantic ocean. On the west, it is followed by the prairies or desert we have noticed. Moisture is as remarkably abundant in the forest tracts, as it is wanting in that of the prairies. The natural consequence of the position of places, on the confluence of two regions whose meteorological constitutions are so essentially different, is an exposure to the extremes of both, following the current of air. This is, in an extraordinary degree, the case with Louisiana, where two successive seasons may differ so much as one to present an almost constant deluge of rain, and the other scarcely affording a single shower. Ascending the Mississippi, the quantity of rain becomes less in a given time, at least as far north as 42°.

A remark may be made in place, that what may be designated the rainy and dry seasons, are not confined to the tropics. Rain and snow are mere relative terms; therefore, in the United States, the rainy

and dry seasons are nearly as regular in their succession and periods, as similar seasons are within the tropics. The difference is rather in the quantity, than in the times of rain and fair weather. To this theory, Louisiana is the most remarkable exception; and when viewed in connexion with the adjacent and distant regions, the causes of the aberrations of the seasons of that state, are at once to be conceived, and clearly understood. It ought, however, to be recollected, that we are now making a natural and not a political survey; therefore, in specifying Louisiana, the Delta of Mississippi and contiguous places are meant. It is when making such expensive surveys, and elucidating the phenomena of nature on so large a scale, that the full value of maps can be fully appreciated. Without maps, no enlarged views of the laws of meteorology could ever be formed by any exertion of the human intellects; and it is from neglect of such comprehensive combinations, that so many crude notions on particular climates pass current.

The climate of Missouri is consequently liable to great extremes of heat and cold. The winters of St. Louis are severe; the Mississippi, in ordinary seasons, being frozen before the end of December. The illimitable plains to the south west and west of the state, leave an open vent to the winds, and superinduce a much greater severity of cold in a given latitude than on the Atlantic coast.

The seasons of Missouri partake of the unsteady character of the climate of the Mississippi basin, and indeed of the continent of North America in general. No two seasons in succession have much resemblance to each other. The occurrence of first frost in autumn, the last in spring, or the quantity and times of rain and snow in winter, are equally uncertain.

In one respect, the climate of Missouri differs essentially from that on the Atlantic slope in similar latitudes: as we before observed, less moisture falls on the former than on the latter, either as rain or snow. This circumstance has misled many as to the real nature of the climate of Missouri, and has given to it a character of mildness, the reverse of the fact.

The productions of Missouri have been noticed, both vegetable and metallic. We may merely add, that the vegetables usually cultivated, are those found in the middle states generally.

In metallic and other fossil substances, Missouri is perhaps the richest region in the United States. The following catalogue, given by Mr. Schoolcraft, yields a result, which strongly illustrates the mineral wealth of that state, where most of these substances are found.

Metallic Substances.—Native iron, red oxyd of iron, iron sand, native magnit, argillaceous oxyd of iron, micaceous oxyd of iron, iron pyrites, brown hematite, sulphuret of zinc, sulphate of zinc, sulphuret of lead, granular sulphuret of lead, earthy oxyd of lead, carbonate of lead, sulphuret of antimony, black oxyd of manganese, native copper, sulphate of copper.

Saline Substances.—Nitrate of potash, muriate of soda, sulphate of magnesia, native alum.

Inflammable and Miscellaneous Substances.—Sulphur, stone-coal, pumice, madrepore, graphite.

Earthy Substances.—Chalk, flint, hornestone, rock-crystal, novaculite, common quartz, citrine, radiated quartz, red ferruginous quartz, granular quartz, tabular quartz, hoary quartz, steatite, mica, chalcledony, reddle, yellow earth, opalized wood, agaric mineral, plastic white clay, fuller's earth, stalactite, statagmite, pudding stone, opal, jasper, agatized wood, carnelian, sulphate of lime, feldspar, calcareous spar, basanite, buhrstone, onyx agate, greenstone porphyry, schorl, ochre, shale.

To the above may be added carbonate of lime, in form of limestone, and marble.

The lead mines of Missouri are principally in the county of Washington, but there are also diggings in St. Genevieve, Madison and Jefferson counties.

The ore is that species called galena, by mineralogists; the sulphuret of lead, of chemistry. The ore yields about 80 per cent. pure lead. The mass seems inexhaustible, but very irregularly disposed, the veins having no stratification, but branch through the other substances in every direction, and of an indefinite thickness. Taken as a whole, the lead district of the state of Missouri is the richest in the production of that metal of any ever discovered.

The lead mines of the state of Missouri deserve some historical notice, from their immensity and national importance.

The West Company was formed by letters patent under the regency of the Duke of Orleans, during the minority of the King of France, Louis XV.; dated the 23d of August, 1717, and enregistered the 6th of September following.

Under this company, came out to Louisiana in 1719, Philip Francis Renault, son of Philip Renault, a noted ironfounder at Consobre, near Manberge, in France.

In 1720, Renault and one of his associates, a M. Lamotte, discovered the respective mines which bear their names.

Renault worked the mines extensively, but was in the end obliged to abandon the undertaking, from some fiscal arrangements in France, and returned to his native coun-

try in 1742. From that period until 1797, or during the long period of 55 years, no attempts of any consequence were made to smelt lead in these neglected mines.

In 1797, a Moses Austin, Esq. from Wythe county in Virginia, made a journey to the lead mines in Louisiana, and obtained a patent from the Spanish authorities for one league square, in consideration of erecting a reverberatory furnace. This work was commenced in 1798. Mr. Austin sunk the first regular shaft for raising the ore.

In 1799, this gentleman erected a shot tower, and made shot of approved quality. The latter work was erected under the superintendence of Elias Bates. Since the foregoing period, the lead mines have continued to attract public attention, and have been extensively worked. When Mr. Schoolcraft visited this tract in 1818, he enumerated forty-five diggings.

What is now the state of Missouri formed a part of Louisiana, and has underwent the political revolutions of that country, and was amongst the first parts that the French discovered. In 1674, two missionaries, by the names of Jolliet and Marquette, entered the Mississippi by the route of Ouisconsin, descended the former stream to the Arkansas, and returned to Canada by the Illinois. The country was visited by M. de la Salle in 1683. Some settlements were made soon after in the respective regions now comprised in the state of Illinois and territory of Arkansas, but none in any part now within the state of Missouri.

In 1762, all Louisiana was ceded by France to Spain, and possession taken in 1769.

Upper Louisiana, now state of Missouri, began to be peopled about 1760. The attempt of settlement at the mines by Renault, and its failure, we have seen. In 1762, the present town of St. Louis was commenced, since which period settlements have gradually, but during the existence of the Spanish government, slowly advanced. In 1803, this country, with all Louisiana, was ceded to the United States; and, early in 1804, was taken possession of by Major Amos Stoddard.

Louisiana was divided into two territories, that of Orleans below N lat. 31°, and Louisiana, containing the residue of that country. New Orleans continued the capital of Orleans, and St. Louis of Louisiana.

In 1810, the then territory of Louisiana contained 20,485 inhabitants, of which 3011 were slaves.

In 1812, when the territory of Orleans became the state of Louisiana, Louisiana territory was changed to the territory of Missouri; and, on the fourth of January, 1813, Mr. Edward Hemstead took his

seat in Congress, as delegate. April 3d, 1818, the bill for the admission of Missouri into the Union as a state received the second reading, and was committed.

On the bill being brought up for a third reading, its passage was opposed, unless under condition of prohibiting the introduction of negro slaves. This opposition defeated the bill in the session of 1818-19, and in the session of 1819-20, both of which, particularly the latter, was in great part consumed in debates on the subject.

In the former session, March 5th, 1820, an act was passed permitting the people of Missouri to elect a convention, which was empowered to frame a constitution, and adopt such name as they should choose; and under such constitution, when approved by Congress, such a state to become one of the United States, with all the rights and immunities appertaining to the original states.

The convention of Missouri met at St. Louis, — 1820, and formed a constitution, which was presented to Congress for approval, at the opening of the session of 1820-21. A clause in the constitution, excluding from the state free negroes and people of colour, gave rise to a long and violent debate in both houses, which eventuated in a resolution of Congress, dated March 3d, 1821, in the following terms:

“Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That Missouri shall be admitted into this Union on an equal footing with the original states, in all respects whatever, upon the fundamental condition, that the fourth clause of the twenty-sixth section of the third article of the constitution submitted on the part of said state to Congress, shall never be construed to authorize the passage of any law, and that no law shall be passed in conformity thereto, by which any citizen of either of the states in this Union, shall be excluded from the enjoyment of any of the privileges and immunities to which such citizen is entitled under the constitution of the United States: Provided, That the legislature of the said state, by a solemn public act, shall declare the assent of the said state to the said fundamental condition, and shall transmit to the President of the United States, on or before the fourth Monday in November next, an authentic copy of the said act; upon the receipt whereof, the President, by proclamation, shall announce the fact; whereupon, and without any further proceeding on the part of Congress, the admission of the said state into this Union, shall be considered as complete.”

The legislature of Missouri, on the 26th of June, 1821, passed an act of accession to the conditions contained in the foregoing

resolution of Congress, and transmitted the act to the President of the United States, who, on the 10th day of August, 1821, issued his proclamation pursuant to the tenor of the resolution of Congress, and the accession of the legislature of Missouri to its provisions, and Missouri became a state of the United States.

It may not be uninteresting to trace the line, which, by the act of admission of Missouri, bounds the slave holding from the non-slave holding states and territories that have been, or may be formed beyond the Mississippi. Beginning on the right bank of that stream, at the mouth of Ohio, and following the boundaries of the state of Missouri up the Mississippi and Lemoine rivers, and thence to the SW angle of Missouri, on the N boundary of the Arkansas territory, at N lat. 36° 30'; and thence due west to the frontier line between the United States and Spain.

The extent and relative population of Missouri, can be only vaguely calculated, as the outlines and respective area of the counties remain unascertained to any approach to accuracy. The foregoing table will exhibit, however, the general extent, it is presumed, sufficiently correct for ordinary purposes.

The lines of settlement in Missouri run chiefly along or near the water courses, and if the one-tenth part of the entire area is assumed for the surface actually under culture, I am led to believe, will be an ample estimate. This would yield 6287, or in round numbers, 6300 square miles, and with a population a little exceeding 10 to the square mile.

By the census of 1820, the people of Missouri were found to be composed of 55,988 whites; 376 free coloured persons; and 10,222 slaves; and classed thus:

Foreigners not naturalized	-	496

Engaged in Agriculture	-	13,559
do. in Manufactures	-	1,887
do. in Commerce	-	480

In the number employed in manufactures, it is probable are included about 1100 persons employed in the lead mines.

Mitcham, village in Surry, seated on the Wandle, on which are some snuff-mills, and two calico printing manufactures. It is 8 miles SW of London.

Mittau, strong town of Poland, the capital of Courland, remarkable for its large ducal palace. It is seated on the Bolderau, 45 miles E of Goldingen, and 270 NNE of Warsaw. Lon. 23 50 E lat. 56 40 N.

Mobile, river of the United states in the State of Alabama, is formed by the united streams of Tombigbee and Alabama rivers. The extreme north-west sources of Tombigbee are in the state of Mississippi, near the south line of Tennessee, from whence the different branches flow south-east into Alabama, where, uniting, they form the Tombigbee, which flows nearly due south to its junction with the Alabama, at N lat. 31 05. The Tombigbee receives, besides many lesser confluent, the Tuscaloosa, or Black Warrior, a large stream from the north-east. The entire length of the Tombigbee is about 300 miles, by comparative course.

The Alabama is formed by the united streams of the Coosa and Tallapoosa, which both rise in Georgia, and flowing to the south-west, unite at N lat. 32 23, and from thence to the junction with Tombigbee assumes the name of Alabama. The entire length of the Alabama, from the sources of the Coosa to the head of Mobile river, is, by comparative course, about 400 miles. A considerable branch from the north, called the Cahaba, enters the Alabama about 100 miles, by the windings of the stream, below the junction of the Coosa and Tallapoosa. Cahaba, the seat of government for the state of Alabama, is situated at the mouth of the Cahaba river.

The river Mobile is about 40 miles in length, from the head of Mobile bay to the junction of the Tombigbee and Alabama rivers. Within a very short distance of its head, the Mobile divides into two branches, that of Mobile proper to the west, and Tensaw to the east. These never again reunite, but flow separately into Mobile bay, with several inlets from one to the other. The islands enclosed between the main branches and the inlets are, in general, liable to inundation.

The Mobile river admits vessels of 12 feet draught in all its length: the Tom-

bigbee, those of five feet to Fort Stoddard; and Mobile, those of about six feet to Fort Claiborne.

Mobile Bay, opens below the mouth of the Mobile and Tensaw rivers, and gradually widens from four to ten or twelve miles, and, extending 30 miles nearly south, again contracts to about five miles, having Dauphin Island in nearly the middle of its entrance into the gulf of Mexico. The main channel, between Dauphin Island and the Point of Mobile, has a depth of 18 feet. The channel between the main shore and Dauphin Island, known by the name of the Pass au Heron, has only six feet. A bar of 13 feet water crosses Mobile bay three miles below the town of that name.

Mobile Point, is a long, low, sandy and narrow peninsula, which bounds Mobile bay on the south, extending from the bay of Bon Secours, the south-eastern extremity of the former, towards Dauphin Island, towards which it approaches to within three miles. This point has been rendered remarkable, by the erection of a military post on its extreme west extension called Fort Bower.

This fort was attacked, September 15th, 1814, by a British squadron, consisting of two vessels of 28 guns each, and one of 18 guns, with a land force of 200 Indians, and 110 marines. The British were repulsed, with the loss of the *Hermes*, and about 100 men killed and wounded.

After their defeat at, and retreat from New Orleans, the British attacked and took Fort Bower, on the 15th of February, 1815.

Mobile Town, is situated on the west or right shore of Mobile bay, near the mouth of Mobile river, upon a bank elevated 18 or 20 feet above the surface of the water in the bay. Mobile contains about 200 houses and 1000 inhabitants. It is a place of considerable trade, though the entrance to the harbour is inconvenient for vessels drawing more than eight feet water. A long, narrow, and low island lies before the town, and extends about five miles above, round which large vessels are obliged to pass in order to reach the harbour, in which any vessel can enter in safety which can pass the bar, three miles below the island.

Mobile is situated at N lat. 30 44, and W lon. from W C, 10 55, and from Greenwich, 87 55.

Mobile, county of Alabama: bounded by the Gulf of Mexico S, Mississippi W; Baldwin and Monroe counties in Alabama N; and West Florida E. Length 58, mean width 45, area 2600 square miles. It oc-

copies that part of Alabama, south from the 31° 0' N lat. and between the state of Mississippi, and territory of West Florida. surface generally level or moderately hilly. Soil with but very partial exceptions barren, and covered with pine timber. Chief towns Mobile and Blakeley.

Mocha, small island off the coast of Chila. Lat. 38° 30' S, lon. W C 3° 10'.

Mocha, or *Moka*, town of Arabia, in Yemen, seated on a small bay of the Red sea, near the strait of Babelmandel. On each of the points of land, which enclose the road, is a fort ; but they are wretched structures. The town is of a circular form, surrounded by a wall, in which are six gates. It carries on a great trade, especially in coffee ; and the inhabitants are estimated at 18,000, without including the Jews, who inhabit the suburbs. The English, from Hindoostan, at present engross almost exclusively the trade of this place. It stands in a barren plain, 140 miles SSW of Sane, and 630 SSE of Mecca. Lon. 41° 25' E, lat. 13° 10' N.

Mocaulpaur, town of the country of Nepal, capital of a district of the same name. It is situate on the E side of the Napaul, 48 miles SSE of Catmandu, and 130° N of Patna. Lon. 85° 37' E, lat. 27° 35' N.

Molbury, town of Devonshire, with a market on Thursday, and a manufacture of plush ; seated between two hills, 36 miles SSW of Exeter, and 208 WSW of London.

Modena, or *Modense*, a duchy of Italy, 65 miles long and 35 broad, bounded on the W by Parma, N by Mantua, E by the Ferrarese, Bolognese, and Tuscany, and S by the republic of Lucca. It includes the duchies of Mirandola and Reggio. The soil is fertile in corn, wine, and fruits of different kinds. It also feeds a great number of cattle.

Modena, fortified city of Italy, capital of the Modenese, with a magnificent college.

The ducal palace is richly furnished, and contains fine paintings. The inhabitants estimated at 30,000. It is seated between rivers Secchia and Panaro, 34 miles S by E of Mantua, and 60 NNW of Florence. Lon. 11° 12' E, lat. 44° 34' N.

Modica, town of Sicily, in Val di Noto, on the river Accellaro, 10 miles W of Noto.

Modon, strong town of European Turkey, in the Morea, and a bishop's see, with a safe harbour. It is seated on a promontory projecting into the sea of Sapienza, 15 miles W of Coron. Lon. 21° 31' E, lat. 36° 53' N.

Moers. See *Meurs*.

Moeskirch, town of Suabia, in the principality of Furstenburg, 18 miles N of Constance.

Moffat, town of Scotland, in Dumfriesshire, near the river Annan, encompassed on all sides, except the S, by hills of different heights. Its delightful situation and its mineral springs attract much company. It is 20 miles N by E of Dumfries.

Moffat Hills, the highest mountains of the S of Scotland, on the N border of Dumfriesshire. Hartfell, the most elevated, is 23000 feet above the level of the sea. They feed numerous flocks of sheep ; and from them descend, in different directions, the Tweed, Clyde, and Annan, whose sources are but little distant from each to other.

Mogador, town of the kingdom of Morocco, with a harbour for vessels of a middling size. It is surrounded by walls, with batteries, and at high tides is almost encompassed by the sea. The streets are all in straight lines, and contain a great number of handsome houses. The port is formed by a channel, between the mainland and an island above a mile in length. It is 180 miles WNW of Morocco. Lon. 9° 35' W, lat. 31° 28' N.

Mohacs, town in Lower Hungary, in the county of Buraniwar. Here Louis the last king of Hungary, in 1526, was defeated by the Turks under Soliman II. with the loss of 22,000 men, and after the battle suffocated by the fall of his horse in a muddy brook. In 1687, another battle was fought here, between the Christians commanded by prince Charles of Lorraine, and the Turks, who were defeated with the loss of 10,000 men, their cannon and baggage. It is seated at the conflux of the Corasse with the Danube, 23 miles N by E of Essek;

Mohafsey's-store, post office, Lincoln county, North Carolina.

Mohawk, river of New York, the great western branch of the Hudson. The extreme north-western source of the Mohawk is in Lewis county. It thence enters Oneida county, flows south 20 miles to Rome, where it turns to SE about 28 miles by comparative courses, to its first northern confluent West Canada. Here it assumes

nearly an eastern course of 5 miles to its passage through the Katsbergs at the Little falls. It is precipitated at this place over a ledge of rocks. See article *New York*; section, Grand Western Canal. Below the Little Falls, the Mohawk flows by comparative courses 70 miles SE by E to its junction with the Hudson at Waterford. Two miles above Waterford it is again precipitated over the Cahoes rocks by a single pitch of 70 feet. The Mohawk, besides West Canada, receives from the north, East Canada, Chuktananda, and some others of lesser note; and from the south, Oriskany creek, and Schoharie river. Its entire comparative course 123 miles. It passes, the villages or towns of Rome, Utica, Herkimer, Little Falls, Oppenheim, Palatine, Canajoharie, Caughnawago, Amsterdam, and Schenectady. Its banks generally rise by an acclivity of more or less inclination, but in some places as at Schenectady, Herkimer, Utica, and Rome, meanders through extensive alluvial flats. The soil in most places, particularly the flats highly fertile, and well cultivated. It is designed to carry the Great Western Canal along its right shore from opposite Waterford to Rome.

Mohawk Bay, in Fredericksburgh, Upper Canada, bay of Quinte, lies opposite to the Mohawk settlement, and close to the mouth of the river Appanee.

Mohawk Settlement, bay of Quinte, Upper Canada, is west of Richmond, and comprehended between the river Shannon and Bowen's Creek.

Mohawk village, on the Grand River, or Ouse, Upper Canada, is the principal village of the Six Nations. This is the residence of their principal Chief, Captain Joseph Brant. The village is beautifully situated, has a neat church with a steeple, a school house and a council house; and not far from it is a grist and saw-mill.

Mohegan village, on the right bank of the Thames, 5 miles below Norwich. Here reside the remnant of the Mohegans.

Mohiccon, large creek of Ohio, rises in Wayne and Richland counties, flows south about 50 miles, joins White Womans river in Coshocton, near the E border of Knox county.

Mohiccon, township of Wayne county, Ohio. Population in 1820, 632.

Mohila, one of the Comora islands, between the N end of Madagascar and the continent of Africa. It has a good road for ships. Lon. 43 50 E, lat. 12 25 S.

Mohilef, or *Mogiler*, government of the Russian empire, comprising a part of Lithuania, dismembered from Poland in 1772.

Mohilef, or *Mogiler*, town of Lithuania, capital of a Russian government of the same name. By the division of Poland in 1773, it was ceded to Russia, with its territory,

and erected into an archbishopric of the Roman church, with an assistant bishop. In July, 1812, a severe battle was fought in the neighbourhood of this place, between the French under Davoust, and the Russians, under the late prince Bagration. It has a considerable trade, and is situated on the Dnieper, 340 miles ENE of Warsaw, and 364 S of Petersburg. Lon. 30 14 E, lat. 53 52 N.

Mohrin, town of Brandenburg, in the New Mark, 18 NNW of Custrin.

Mohringen, town of Prussia, in the province of Oberland, situate on a lake of the same name, which almost surrounds it. Here is an old castle, formerly a convent, belonging to the knights of the Teutonic order, in consequence of whose wars the town has frequently suffered. It is 56 miles SSW of Königsberg, and 56 SE of Dantzic.

Molih, town and fort of Arabia Petrea, on the coast of the Red sea, 130 miles S of Acaba, and 180 NW of Medina. Lon. 33 50 E, lat. 27 30 N.

Molira River, runs into the bay of Quinte, Upper Canada, near the south-west angle of the township of Thurlow.

Molira, township of Franklin county, New York. Population in 1820, uncertain.

Mojaisk, town of Russia, 63 miles W from Moscow. Between Mojaisk and Ghiatsk, on the 7th day of September, 1821, was fought the battle of Borodino.

Moirans, town of France, in the department of Is-re, on the river Isere, 25 miles SE of Vienne.

Moissac, town of France, in the department of Lot, with a trade in corn and flour; seated on the Tarn, near its conflux with the Caronne, 13 miles NW of Montauban.

Mola di Bari, town of Naples, in Terra di Bari, seated on the gulf of Venice, 17 miles E of Bari.

Mola di Gaeta, town of Naples, in Terra di Lavoro, seated near the sea, 3 miles NE of Gaeta.

Mold, town of Wales, in Flintshire, with a market on Saturday. The assizes are held here. It is 5 miles S of Flint, and 201 NW of London.

Moldau, river of Europe, in Bohemia, it rises in the Winterberg hills near Ravensburg, within less than 20 miles from the Danube at the mouth of the Inn, flowing nearly north about 100 miles, it unites with the Beraun from the SW at lat. 50 N. About 5 miles below the mouth of the Beraun it passes the city of Prague, and joins the Elbe above Melnick, 20 miles below Prague. The Moldau drains more than half of all Bohemia.

Moldau, or *Sereth river*, rises in the Carpathian mountains in the Austrian province of Bukowine, and flowing SE falls into the

Danube, above the mouth of the Pruth. The Moldan gives name to Moldavia.

Moldavia, province of Turkey in Europe, 270 miles long, and from 30 to 120 broad; bounded on the N by Poland, from which it is also divided on the NE by the Dniester, E by New Russia and Bessarabia, SE by Bulgaria, from which last it is parted by the Danube, SW by Walachia, and W by Transylvania. The other principal rivers are the Pruth and Sereth. The W part is mountainous, and there are some uncultivated deserts; but it abounds in good pastures, which feed a great number of horses, oxen, and sheep; it also produces corn, pulse, honey, wax, fruits, with plenty of game and fowls. The sovereign, who is styled hospodar, is tributary to the grand seignior. The inhabitants are Christians of the Greek church. Jassy is the principal town.

Mole, river of Surry, which rises on the borders of Sussex, flows N to Dorking, and passing beneath Box Hill, is said to disappear in its vicinity, and to rise again near Leatherhead. Hence it is supposed to derive its name; but the fact is, that a tract of soft ground, two miles in length, called the Swallows, in very dry seasons absorbs the waste water in caverns on the sides of the banks; but not so as to prevent a constant stream from flowing in an open channel above ground. The Mole, proceeding from Leatherhead to Cobham, enters the Thames, opposite Hampton Court.

Mole, port of St. Domingo. See *Nicholas, St.*

Molfetta, town of Naples, in Terra di Bari, seated on the gulf of Venice, 10 miles W by N of Bari.

Molieres, town of France, in the department of Lot, 11 miles N of Montauban, and 16 S of Cahors.

Molina, strong town of Spain, in New Castile, seated on the river Gallo, in a territory abounding in pastures, 35 miles SE of Sigüenza, and 38 ENE of Madrid. Lon. 1 53 W, lat. 40 50 N.

Molise, territory of Naples, lying between Terra-di-Lavora, Abruzzo Citeriore, Capitanata, and Principato Ulteriore. It is in the form of a triangle, whose sides are 39 miles in length, and is a mountainous country, but fertile in corn, wine, saffron, and silk.

Molise, town of Naples, capital of a territory of the same name, but not populous. It is 30 miles N of Naples. Lon. 14 43 E, lat. 41 36 N.

Monmouth. See *Freehold*.

Monocacy, small but fine river of Pennsylvania, and Maryland. It rises in Adams county of the former state and enters Potomac in Frederick county of the latter. It drains near one half of Adams, and almost the entire surface of Frederick county; comparative length about 50 miles.

Monomotapa, Kingdom on the E coast of Africa, bounded on the N by Monomugi, on the E by the Mosambique, on the S by Sofala and Manica, and on the W by unknown regions. It is watered by several rivers, of which Zambeza is chief. It lies between 23 and 33 E lon. and 14 and 19 S lat.

Monomugi, kingdom of Africa, lying near the equator, between Abyssinia on the N, Zanguebar, on the E, Monomotapa, on the S, and Congo on the W. This country is very little known to the Europeans.

Monongahela, river of the United States, rises in Randolph county, Virginia, interlocking with the sources of the Great Kenhawa, at N lat. 38 30. Its course is nearly S 80 miles, to where it receives the west branch, from Lewis and Harrison counties. Below their junctions the united stream flows SE 30 miles to the South boundary of Pennsylvania, which it passes, and two miles lower receives from the SE, Cheat river, little, if any, inferior in column or length to the Monongahela itself. Cheat river rises in Randolph county, and flows through that and Monongahela county, enters Pennsylvania, and unites with the main stream as before noticed. The sources of the Monongahela, and Cheat are in the western spurs of the Appalachian mountains. Below the mouth of Cheat, the Monongahela flows nearly S 50 miles, to its junction with the Youghiogheny. The latter rises in the Appalachian mountains, in Alleghany county, in Maryland, interlocking with the sources of the North branch of the Potomac, flows north into Pennsylvania, passing through Fayette, Westmoreland, and entering Alleghany county, unites with the Monongahela at M'Keesport, after a comparative course of about 100 miles. Twelve miles below its junction with Youghiogheny, the Monongahela unites with the Alleghany, and

forms the Ohio at the city of Pittsburg. The entire length of the Monongahela river, by comparative courses, is about 170 miles, but following the meanders of the streams, either long in the main or Cheat branch, the length exceeds 200 miles.

The country drained by Monongahela is in some parts mountainous and in all hilly.

For down stream navigation, the Monongahela, at high water, is passable with large boats as high as the mouth of the West Branch, and by lighter vessels much higher. Cheat river is navigable into Randolph county, about 50 miles comparative course above its mouth, and the Youghiogheny to the Ohiopyle falls, in Fayette county, 60 miles above its junction with the Monongahela.

Monongalia, county of Virginia; bounded N by Pennsylvania; E by Preston county Virginia; S by Sandy creek or Randolph county; SW by Monongahela river or Harrison; and W by Tyler. Length 33; mean width 20; area 660 square miles. Surface generally extremely hilly, and in part mountainous. The river alluvion and some of the soil of the hills highly fertile. The Monongahela and Cheat unite in the lower part of the county, and both streams traverse it obliquely. Chief town Morgantown.

It contains 500,000 acres; is divided into nine hundreds, and 47 parishes; and has five market towns. The number of inhabitants in 1811 was 51,931; and it sends two members to parliament. Though barren and mountainous in many parts, it has a greater mixture of fertile vale and plain than several of the Welsh counties. Its riches proceed from its sheep and wool, the hilly tracts being almost entirely sheep walks; and the flocks, like those of Spain, are driven from distant parts to feed on them during the summer. This county also affords mineral treasures, particularly lead; and it abounds with slate and lime; but there is no coal. Its principal rivers are the Severn, Vyrnew, and Tannat. Population in 1801, 47,978; in 1811, 51,931; and in 1821, 59,889.

Montgomery, county of New York; bounded by Schenectady SE; Schoharie S; Otsego SW; Herkimer W; Hamilton N; and Saratoga E. Length and breadth would average about 30 miles each; and area 900 square miles. This is a very richly diversified county. The Mohawk meanders through it, dividing it into two unequal sections, leaving about one third part S from the river. East Canada creek enters the Mohawk from the N, and for a distance of nearly 15 miles, forms the boundary between Montgomery and Herkimer counties. The Schoharie river enters at the SE angle, and flowing nearly N, falls into the Mohawk, opposite Tripes Hill. The NE angle of this county is watered by the Sacondago branch of the Hudson. Except the alluvial plains near the Mohawk, this county is generally hilly, but rising in most instances, particularly S from the Mohawk, by a not very abrupt acclivity, the slopes are arable to the summits. The soil partakes of the variety of the surface, presenting every transition

from the highly fertile banks of the Mohawk, Schoharie, and other streams to eminences, rocky, and of course sterile. Staples, grain, flour, live stock, &c. Chief town, Johnstown.

Montreal, city of Lower Canada, on the eastern side of the island of the same name. Montreal is a place of considerable extent, and great commercial importance. The houses are generally built in a modern style, in brick or stone, roofed with sheet tin, iron or copper, and many finished with taste and elegance. The public buildings are numerous. The seminary of St. Sulpice, dates its origin to the era of the French government over Canada, and is a flourishing institution. The Hotel Dieu, a charitable institution, founded by the French in 1644, for the purpose of relieving indigent sick, is still supported and conducted by a superior and 36 nuns. The Convent of Notre Dame, also a French establishment, conducted by a superior and 60 sisters, for the instruction of females in all the useful and ornamental parts of their education. The Convent of the Grey Sisters, is a general hospital for the reception of invalids and aged poor.

This city is the grand depot for the trade of Canada, and receives the inland freights from the St. Lawrence and Ottawa rivers. Its harbour is safe, with from 13 to 26 feet water. The rapid of St. Mary two miles below, is a very serious impediment to the entrance of vessels, demanding a strong wind to stem it. Rapids again occur about 4 miles above the harbour, which entirely prevents any water communication between the city and La Chine. See *La Chine*.

Moravian Village, Upper Canada, on the river Thames, is in the 4th township from its mouth; it is a regular built village, of one street, with indifferent wooden huts, and a small chapel; inhabited by Indians converted to the Moravian faith, and their pastors. Respecting this village and its inhabitants, an intelligent friend writes thus.

"I crossed the Thames at the Moravian town, 75 miles from Detroit, and spent the night there with two Moravian missionaries from Bethlehem and Nazareth. I think they are governed by very different motives from these which influence mercenary preachers. They tell me they have more hopes of Christianizing, than of civilizing the Indians. One of these men teach the males, the other the females. There are about 160 of both sexes, and all ages at this place. They express no desire to exchange the

native habits of savages, for those of civilized life; nor do they inspire a hope in any place where I travel, that the labours for their civilization and reformation will avail any thing, but to accelerate their destruction." Aug. 22d, 1822.

Morava, or *Moraw*, river of Germany, which has its source on the confines of Bohemia and Silesia. It crosses Moravia, where it waters Olmutz and Hradtsch, and receiving the Teya, from the confines of Lower Hungary, and Upper Austria, separates these two countries as far as the Danube, into which it falls.

Morave, river of Turkey in Europe, which rises in Bulgaria, and running through Servia, by Nissa, falls into the Danube, at Semendrialh.

Moravia, marquisate annexed to Bohemia, by which it is bounded on the W, by that kingdom and Silesia on the N, by Silesia and Hungary on the E, and by Austria on the W. It takes its name from the river Morava, which runs through it; and hence the sect of Christians, called Moravian, take their name, their doctrines having been first taught here. Olmutz was the capital, but now Brunn claims that honour.

Morea, ancient Peloponnesus, a peninsula in the S part of Greece, to which it is joined by the isthmus of Corinth, lying between the gulfs of Lepanto and Engia. It is 180 miles long, and 130 broad, and divided into three large provinces. The air is temperate and the soil fertile, except the middle, where there are many mountains. It is watered by the several rivers, of which the Alpheus, the Vasil Potamo, and the Stromio are the chief. The extent of this fine peninsula is about 13,000 square miles, and inhabited by about 400,000 persons, of which perhaps four-fifths are Greeks, and

the residue Turks, Albanians, Jews, &c. No part of Europe presents a more richly variegated aspect. One scene of river or mountain grandeur succeeds another, under a serene and benignant sky. Though mountainous, its valleys are generally composed of a most productive soil. But this beautiful country is blasted by the despotism of the Turkish government. Between lat. 36 34 and 38 0 N.

Morgantown, village of Clinton county Ohio.

Morgarten, mountain of Switzerland between the cantons of Schweitz and Zug. Remarkable for a splendid victory gained by the Swiss over the Austrians, 1-15, which secured the stable foundation of the Helvetic Union.

Morges, commercial town of Switzerland, in the Canton of Bern, and capital of a bailiwick, seated in a beautiful bay of the lake of Geneva. By its canal merchandise is transported from Geneva to other parts. And it is five miles WSW of Lausanne. Lon. 6 42 E, lat. 46 27 N.

Morhange, town of France, in the department of Moselle and late province of Lorraine, 200 miles E of Paris. Lon. 6 42 E, lat 48 51 N.

Morlachia, mountainous country in Hungarian Dalmatia, the inhabitants of which are called Morlacks, or Morlacchi. They inhabit the pleasant valleys of Koter, along the rivers Kerha, Cetina, Narenta, and among the inland mountains of Dalmatia. They are said by some, to be of Walachian extraction; but others think their origin involved in the darkness of barbarous ages. The Morlacchi are so different from the inhabitants of the sea-coasts in dialect, dress, disposition and customs, that they seem clearly to be of a different original.

Morlaix, considerable seaport of France, in the department of Finisterre, and late province of Bretagne, with a castle and a tide harbour. The church of Notre-Dame is a singular structure, and the hospital very handsome. The inhabitants carry on a considerable trade in linen, hemp, and tobacco. It is seated on a river of the same name, 30 miles NE of Brest. Lon. 3 46 W, lat. 48 33 N.

Morocco, empire of Africa, compre-

hending a considerable part of the ancient Mauritania, lying between 28 and 36 N lat. It is bounded on the W by the Atlantic; on the E by the river Mulvia, which separates it from Algiers; on the N by the Mediterranean; and on the S by mount Atlas. Its greatest length, from NE to SW, is above 590 miles, and where widest, not more than 260 broad. This empire contains the kingdoms of Sus, Tarudan, Morocco Proper, Tasilet, Sugelmessa, Fez, and Mequinez. The air of this country is pretty pure and temperate, especially near mount Atlas. The soil though sandy and dry in some places, is so fertile in others, and the fruits, as well as the pastures, so good, that it would be a delightful country if it was well cultivated. The inhabitants are Mahometans, of a tawny complexion, robust, and very skilful in managing a horse, and wielding a lance: but they are jealous, deceitful, superstitious, and cruel. The population of this extensive region has been variously stated, but cannot exceed, if it amounts to, 10,000,000. Mogador, is the only port in Morocco which maintains any extensive connexions with Europe. It has three capital cities, Morocco, Mequinez, and Fez.

Morocco, one of the capital cities of the kingdom of Morocco, seated in a beautiful valley formed by a chain of mountains on the N, and those of the Atlas on the S and E. It has nothing to recommend it but its great extent, and the royal palace, which takes up so much ground that it resembles a small city. It is enclosed by strong walls, the circumference of which is eight miles: they are flanked by square towers, and surrounded by a wide and deep ditch. The Jews have a market of their own, and live in a separate town, walled in, and shut up every evening at nine, after which no person can enter or depart, till next morning. Morocco is 90 miles E of Mogador, and 400 S of Gibraltar. Lon, 6 45 W, lat. 31 12 N.

Moron, town of Spain, in Andalusia, seated in a pleasant, fertile plain. In its neighbourhood is a mine of precious stones. It is 30 miles SE of Seville. Lon. 5 10 W, lat. 37 10 N.

Morotai, one of the Sandwich Isles, seven miles WNW of Mowee. Yams are its principal produce; but it has little wood. The coast, on the S and W sides, form several bays, which are tolerably sheltered from the trade-winds. Lon 117 14 W, lat. 21 10 N.

Morpeth, borough in Northumberland, with a market on Wednesday. It is an ill built, straggling place, seated on the N bank of the Wentsbeck, and on the

opposite side is the church, and a castle in ruins. It sends two members to parliament, has a free-school, founded by Edward VI. and is 15 miles N of Newcastle, and 287 N by W of London. Lon. 1 28 W, lat. 55 15 N.

Morriches, post village Brookhaven, Suffolk county, New York on the S side of Long Island 72 miles E from New York.

Morris, county of New Jersey; bounded by Essex SE; Somerset S; Hunterdon SW; Sussex NW; and Bergen NE. Length 26; mean width 19; and area, about 500 square miles. The surface of this county is very pleasantly variegated by hill and dale. It is drained by Rock-away, and other confluent of Passaic river, and also by some streams flowing S into Rariton river. The NW part is mountainous, but the features of nature become less rugged, advancing to the Eastward. The Pompton, and Rock-away rivers unite and form the Passaic, on the eastern border of this county, six miles above the celebrated Passaic falls at the village of Patterson. Soil productive in fruits, grain, and pasturage. Chief town, Morristown.

Mosambique, strait or channel of the Indian ocean, between the E coast of Africa and the island of Madagascar.—It is narrowest in the middle, where it is 240 miles over; and in this part, on the continent is a kingdom, island, and city of the same name.

Mosambique, kingdom of Africa, on the E coast, and in that part of the Indian sea which passes between the continent and the island of Madagascar. The capital is of the same name, situate on an island, chief of three islands that form part of the kingdom. The largest, called Mosambique, is not more than three miles in length, and half as much in breadth, and is about two miles from the continent. The other two, called St. George and St. James, lie each side of it, facing the continent. The islands are in general sandy, but in some parts produce citrons, oranges, and other fruits. The soil on the continent is luxuriant and fertile in rice, millet, fruits, pulse, roots, and other esculents; and it feeds vast quantities of cattle, large and small, particularly sheep with large tails. Here are wild beasts of various kinds, as stags, boars, and elephants, which last are so fierce and destructive, that the inhabitants are obliged to kindle large fires round their sown fields, to prevent their being devoured by them. The country is also rich in gold, which is washed down by the rivers in great quantities, and makes a chief part of its commerce. Ivory, ebony, slaves, and cattle, are likewise changed for European goods. The natives stand in awe of the Portuguese, who are the only Europeans admitted into some of their ports, whence they export the commodities already mentioned, also silver, copper, and wax. The city of Mosambique is said to be very handsome, and the buildings well constructed, especially the churches and convents; and the fort, or castle, is about a musket shot from the city. The fort belongs to the Portuguese, who have generally a good garrison here, a well stored magazine, and

a large hospital for sick sailors. Their ships always call here in going to the East Indies; and the harbour is so commodious, that whole fleets may anchor and provide themselves with all necessaries. Lon. 41 8 E, lat. 15 5 S.

Mosbach, town of Germany, in the palatinate of the Rhine, with an elegant castle, seated on the Neckar, 25 miles ENE of Heidelberg. Lon. 9 21 E, lat. 49 28 N.

Mosburg, town of Bavaria, seated at the conflux of the Amber with the Iser, nine miles W of Landshut.

Moscovy. See *Russia*.

Moscow, formerly a duchy, but now a government of Russia; bounded on the N by the government of Tver, E by that of Great Volodimir, S by the governments of Kalugo and Resan, and W by those of Tver and Smolensko. It is a fruitful country, and produces abundance of excellent asparagus.

Moscow, city of Russia, capital of the government of Moscow, and formerly of the whole empire. Previous to the entry of the French, it was the largest city in Europe; the circumference within the rampart that enclosed the suburbs, being 20 miles; but its population did not correspond with its extent. It contained within the ramparts 300,000 souls, and was the most populous city in the empire, notwithstanding the residence of the court was at Petersburg. As Moscow is justly rendered memorable in the annals of history, for one of the most extraordinary events that ever took place, we must not here pass it over in silence. The French having entered Russia in the month of June, 1812, with such an immense army, that they threatened, by their rapid progress, to sweep every thing before them like a torrent; and it was generally expected, that if they once reached this city, which abounded in such vast resources for their army, as well as by affording them comfortable quarters for the winter, their object of the war would have been completed. The Russian army which had retired as the French advanced, at length halted at Mojaïsk, a distance of about 60 miles, and concentrated their forces for the defence of Moscow. Accordingly a most dreadful battle took place on the 7th of September, which continued with unusual obstinacy on both sides; but victory at length decided in favour of the French, and the Russians retreated off the field, leaving Moscow to its fate. The road being thus left open, the French entered this city on the 14th of the same month, with little opposition. But a sad reverse of fortune now took place, which pre-

served the Russian empire from ruin, and paved the way to the downfall of the French military power over Europe. The houses of Moscow being constructed almost entirely of wood, the governor of the town, Rostopchin, formed the desperate resolution of setting the city on fire, which was so completely carried into effect at the time the French had taken possession, that they were foiled in their last resource, and compelled to attempt their retreat, at the moment they thought themselves securely entrenched for the winter. In this posture of their affairs, nothing now remained but to offer terms of peace to the Russians, which were rejected: they next proposed an armistice, which was also refused; and on the 19th of October following, they commenced their calamitous retreat from Moscow. The conflagration destroyed upwards of three parts of the town; and shocking to relate, more than 30,000 sick and wounded soldiers who were in the hospital perished in the flames. Before this calamity Moscow was distributed into the following divisions: 1. The Kremlin, which was in the central and highest part of the city, surrounded by high walls of stone and brick, two miles in circumference. This division contained the ancient palace of the czars, where Peter the Great was born; also the cathedral with seven towers, beside other churches; the patriarchal palace; and the arsenal. 2. The Khitaigorod, which was much larger than the Kremlin: it contained the university, the printing-house, and many other public buildings, with all the tradesmen's shops. The houses were mostly stuccoed or white-washed; and was the only street in Moscow in which the houses stood close to each other. 3. The Bielgorod, or White Town, which ran round the two preceding divisions, took its name from a white wall, by which it was formerly surrounded. 4. Semlainogorod, which environed all the other three quarters; and was so denominated from a circular rampart of earth by which it was encompassed. The last two divisions exhibited a grotesque group of churches, convents, palaces, brick and wooden houses, and mean hovels. 5. The Slobođa, or suburbs, which formed a vast exterior circle round all the parts already described, were invested by a low rampart and ditch. These suburbs contained, beside buildings of all kinds, orchards, gardens, corn-fields, much open pasture, and some small lakes, which gave rise to the Neglina. The Moskwa, from which the city takes its name, flows through it in a winding channel:

but, excepting in spring, is only navigable for rafts. It receives the Yausa in the Semlainogorod, and the Neglina and the western extremity of the Kremlin; but the beds of both these rivulets are nearly dry in summer. Moscow exhibited an astonishing degree of extent and variety, irregularity, and contrast; some parts had the appearance of a sequestered desert; others, of a populous town; some, of a contemptible village; others, of a great capital. The streets, in general, were very long and broad; some of them paved; others, particularly in the suburbs, were formed with trunks of trees, or boarded with planks like the floor of a moon. The places of divine worship, including chapels amounted to above 1500; of these, 484 were public churches, some built of brick, stuccoed or white-washed, but the greater part were of wood, painted red; some had domes of copper, others of tin, gilt or painted green, and many were roofed with wood. They were richly ornamented within; and the picture of the saints were decorated with gold, silver, and precious stones. Some of their bells were of a stupendous size: they hung in belfries detached from the church, were fixed immoveably to the beams, and rung by a rope fixed to the clapper. It has always been esteemed a meritorious act of religions to present a church with bells; and the piety of the donor has been measured by their magnitude. Accordingly, Boris Godunuf, who gave a bell of 336,000 pounds to the cathedral of Moscow, was the most pious sovereign of Russia, till he was surpassed by empress Ann, who presented a bell that weighed 432,000 pounds, and was the largest in the known world. In the cathedral of St. Michael, the sovereigns of Russia were formerly interred; their bodies are deposited in raised sepulchres, mostly of brick, in the shape of a coffin, above the pavement. Each tomb has, at its lower extremity, a small silver plate, upon which is engraved the name of the deceased prince, and the time of his death. Upon great festivals, all these sepulchres are covered with rich palls of gold or silver brocade, studded with pearls and jewels. The cathedral of the Assumption of the Virgin Mary was the most magnificent in the city, and had been long appropriated to the coronation of the Russian sovereigns. The foundling hospital, founded by Catharine II. was an immense pile of building, of a quadrangular shape, and capable of containing 3000 foundlings. Moscow was the centre of the inland commerce of Russia, particularly that river communicates with

the Volga; and also by a canal to the Don, which river communicates with the sea of Asoph. This city is 425 miles SE of Petersburg. Lon. 37 53 E, lat. 55 46 N.

Moselle, department of France, including part of the late province of Lorraine. It takes its name from a river which rises in the Vosges, waters Epinal and Toul, receives the Meurte below Nancy, and passing by Metz, Thionville, and Treves, enters the Rhine at Coblenz. Metz is the capital.

Mosenia, town of Persia, in the province of Chuiistan, 22 miles SW of Suster.

Moskoe. See *Malestroom*.

Mosquito Shore, country of New Spain, on the Atlantic Ocean, containing the eastern part of the provinces of Honduras and Nicaragua. In magnitude it exceeds Portugal; is well watered by navigable rivers and lakes; abounds in fish, game, and provisions of all sorts; furnishes every necessary for raising cattle and stock; and clothed with woods producing timber for every purpose at land or sea. The soil is superior to that of the W India islands; the climate is more salubrious; and the destructive ravages of hurricanes and earthquakes have never been known here. The Mosquito Indians are so situate between morasses and inaccessible mountains, and a coast full of rocks and shoals, that no attempts against them by the Spaniards, whom they mortally hate, could ever succeed. By a convention with Spain, in 1786, the English, in consideration of certain cessions on the coast of Yucatan, agreed to evacuate this country.

Moura, town of Portugal, in Alentejo, with an old castle; seated at the confluence of the rivers Ardita and Gaudiana, 87 miles SE of Lisbon. Lon 5 59 W, lat. 38 0 N.

Mourzook, the capital of Fezzan, in Africa, situated on a small river, and supplied with water from a multitude of springs and wells. Being formerly built of stone, it still retains the appellation of a Christian town; and the medley which it presents to the eye, of the vast ruins of ancient buildings, and the humble cottages of earth, and sand that form the dwellings of its present Arab inhabitants, is singularly grotesque and strange. It is surrounded by a high wall, which not only affords the means of defence, but enables the government to collect, at its three gates, a tax on all goods (provisions excepted) that are brought for the supply of its people. A caravan sets out annually from Mesurata to this place; and hence the Fezzanners themselves despatch, every year, a caravan to Cashna, and another to Bornou. Mourzook is 262 miles S of Mesurata, 650 NW of Bornou, and 710 N by E of Cashna. Lat. 27 20 N, lon. 15 5 E.

Mossy, river of Hindoostan, which crossing the country of Golconda, runs into the Kistna on the confines of the circar of Palnaud.

Moustiers, town of France, in the de-

partment of the Lower Alps and late province of Provence. It is noted for a manufacture of fine porcelain, and for a once famous pilgrimage, called our Lady of Beauvezer, seated between two very lofty and craggy mountains. Moustiers is five miles NE of Riez, and 47 WNW of Nice.

Moutier, or *Monstier*, town of Savoy, capital of Tarentesia, with an archiepiscopal palace. It is seated on the Isere, 62 miles NW of Turin. Lon. 6 23 E, lat. 45 30 N.

Mouzon, ancient town of France, in the department of the Ardennes and late province of Champagne, with a late rich Benedictine abbey. It is seated on the Meuse, eight miles SE of Sedan, and 110 NE of Paris. Lon. 5 10 E, lat. 49 33 N.

Mowee, one of the Sandwich Islands, discovered by Captain Cook, is 162 miles in circumference. A low isthmus divides it into two circular peninsulas, of which the Eastern is double the size of the Western. The mountains in both rise to a very great height, and may be seen at more than the distance of 50 leagues. The N shores afford no soundings, but the country presents an appearance of verdure and fertility. Near the W point of the smaller peninsula is a spacious bay, with a sandy beach shaded with cocoa-nut trees: the country behind has a most romantic appearance, the hills rising in a great variety of peaked forms: and their steep sides, and the deep chasms between them, are covered with trees. The inhabitants are computed at 65,000. Lon. 175 56 W, lat. 20 53 N.

Moxahala, or *Jonathan's creek*, rising in the northern part of Perry county, Ohio, flows east across Muskingum county into Muskingum river, which it enters three miles below Zanesville.

Moxos, the northern province of the United provinces of Buenos Ayres; bounded by the Portuguese territories NE; Peru N and NW; La Paz W; Cochabamba S; and Chiquitos SE. Mulhausen, considerable town of France, in Alsace, formerly the capital of a republic in alliance with the Swiss, and entitled to all the privileges of the Helvetic confederacy. The walls of the town enclose

a circumference of not more than two miles; and its whole territory is confined within a precinct of eight miles. The town contains 6000 inhabitants, who are protestants; and there are 2000 subjects in its adjacent villages. It owes its present flourishing state to its manufactures, which are chiefly of printed linens and cottons. It is well built, adorned with handsome structures and seated in a pleasant fertile country on an island formed by the river Ill. It is 15 miles NW of Basle, and 20 E of Befort. Lon. 7 24 E, lat. 47 48 N.

Mulhiem, town of Germany, in the electorate of Cologne, seated on the Rhine three miles from Cologne. Here the few protestants in Cologne are obliged to go to perform divine worship.

Mull, one of the Hebrides of Scotland, an island of considerable size, being 25 miles in length, and in some places of equal breadth. There are many good natural harbours; but there is only one village, called Tobermorey, where a fishing station has been lately established by the British society. The soil is, for the most part, rocky and barren; it is fertile in corn and grass but has no wood; the hills abound with springs, and are covered with cattle; these, with the fishery, and a considerable quantity of kelp, are the only articles of commerce. The ruins of several ancient castles are seen on this island.

Mull of Cantyre. See *Cantyre*.

Mull of Gallorway, rocky promontory, the most southerly point of Scotland, in the county of Wigton.

Musa, populous town of Arabia, in the province of Yemen. It is fortified and surrounded with walls, 18 miles E of Mocha.

Muskingum, river of the United States, in the state of Ohio. This stream is formed by two branches. Whitewoman's and Tuscarawas rivers. The former rises by a number of sources in Richland, Knox, and Wayne counties, interlocking with the head waters of Sciota and Sandusky, entering Ohio, and Vermillion and Black rivers, flowing into Lake Erie, passing through Coshocton county, join the Tuscarawas river at the town of Coshocton. The entire comparative length of Whitewoman's river, from its mouth to the extreme source of Armstrong's creek in Richland county, is about seventy miles, draining one of the most fertile tracts of land in the United States.

The Tuscarawas river has its sources in Harrison, Columbiana, Stark, Portage, Medina, and Wayne counties, interlocking with those of Rocky river and Cayahoga, flowing into Lake Erie, and Great Beaver entering Ohio. The Tuscarawas river is about ninety miles in length from the town of Coshocton, to its extreme source in Medina county.

Below the junction of Whitewoman's and Tuscarawas rivers, the united waters take the name of Muskingum, which flow-

ing south, eight miles, through Coshocton, receives from the east Hill's creek on the border of Muskingum county, and continuing south a little west, twenty-three miles to Zanesville, receives Licking creek from the west. After being precipitated over a fall of about seven feet, at Zanesville, the Muskingum turns south-east by south, and flowing sixty miles, enters the Ohio river at Marietta. Between Zanesville and its efflux into Ohio, the Muskingum river passes through Muskingum, Morgan, and Washington counties. This river is navigable with large batteaux to the falls below Zanesville; for boats of considerable size to Coshocton; and for small craft nearly to the source of the Tuscarawas. A canal has been projected to unite the latter stream to the head waters of Cuyahoga river, and by this channel unite the Ohio river to Lake Erie. A canal, with locks, is already cut around the falls at Zanesville, opening a navigation into the centre of the state of Ohio.

The country drained by the sources of the Muskingum is generally level, but becomes more hilly approaching the Ohio river. In point of climate this river flows from North lat. 41 07 to North lat. 39 28; The area it drains nearly circular, about 7850 square miles.

Muskingum, populous county of Ohio; bounded on the N by Coshocton; E by Guernsey; S by Morgan, and W by Perry and Licking counties. It is 28 by 27 miles in extent, and contains about 660 square miles. Its principal waters are the Muskingum and Licking rivers; Salt, Jonathan's or Moxahala, and Wakatomika creeks. In numerous places adjacent to and in the bed and valley of the Muskingum river, are extensive and almost inexhaustible beds of stone coal, which the people in the vicinity of Zanesville use as fuel. Surface of the county generally hilly, and soil sterile.

Mysol, island, the most eastern of the Moluccas, of a triangular form, with a bold shore. The villages are built in the water upon posts; and there are forests visited by the birds of paradise, which are caught in great numbers. Lon. 130 3 E, at. 2 0 S.

Mysore, country in the peninsula of Hindoostan, lying between the W and E ridges of the Gauts. It extends from 11 39 to 15 0 N lat. and in the N part from 74 55 to 78 35 W lon but diminishing thence as it approaches the S till it ends in a point. The N side is extremely irregular and indented, and the middle part branches out above a degree beyond that to the E. The country is in general dry, rugged, mountainous, and barren; but there are several rivers and mountain torrents, which by artificial means serve to water rice grounds, gardens, &c. In the forests are many elephants, and tigers are common. Oxen, buffaloes, and goats are numerous, and in the NE part many sheep are bred; but horses and asses are few. The chief products are rice, cotton, pepper, cocoa and betel-nut, sugar cane, butter, and oil. The whole of this country, with some other territories to the N and E, and the provinces of Coimbatore, Malabar, and Canara, were subdued by Hyder Ally, a Mussulman, who usurped the throne of Mysore, in 1759, and made Seringaparam his capital. He was succeeded by Tippoo Sultan, who continued his father's state of warfare. On the termination of a war in 1792, Tippoo agreed to pay thirty lacks of rupees, and to cede one half of his dominions to the English and their allies, the Marhattas, and the nizam of the Deccan. In 1799 a new war taking place, his capital was taken by the English, on the 4th of May, and himself killed in the assault. A partition of his remaining territories took place; and on the 30th of June following, Kistna Rajah was placed by the English on the musnud of his fathers at Mysore, and that town remade the capital of his present country. He being only five years old, Colonel Close was appointed to be resident with the rajah of Mysore; and the northern for-

tresses of Nagara, Chitteldroog, Sera, and Nandidroog, were garrisoned by the English, for which the rajah is to pay seven lacs of star pagodas yearly. The island of Seringapatam was retained by the English for provision of the families of Hyder and Tippoo. The dominions of the rajah of Mysore are now divided into three great districts, Patana to the S, Nagara to the NW, and Chatrakal to the NE, so called from the three places where the chief officers are situate. The Patana district is by far the largest, and of itself a much greater extent of territory than ever before was subject to the Mysore family.

Mysore, fortified city of Hindoostan, capital of the country of the same name. It was ruined by the late two sultans; but since the English restored the ancient family in 1799, and made it the rajah's seat of government, a palace has

been built, and its renovation will follow in course. Mysore is 10 miles S of Seringapatam. Lon. 76 50 E, lat 12 15 N.

Mystic, small river, or rather creek of Massachusetts, falling into Boston harbour. It is navigated with sloops to Medford four miles.

Mystic, post village New London county Connecticut.

Mylène, or *Metelin*, ancient Lesbos, island on the W coast of Asia Minor between the gulfs of Smyrna, and Adramytium. It is 36 mil s long and from two to twelve broad. It is one of the most productive islands in the Turkish empire. Population about 50,000. Between lat. 38 25 and 39 20 N.

Nagpou, city of the Deccan of Hindoostan, capital of that part of Berar which is subject to a chief of the Eastern Mahrattas. It is a city of modern date; but though extensive and populous, is but meanly built; and, excepting a small citadel, is open and defenceless. It is 560 miles W by S of Calcutta. Lon. 79 46 E, lat. 21 8 N.

Nagubanja, town of Hungary celebra-

ted for its gold and silver mine-works which are of great produce. It is a metal town and one of the royal free towns, and is 30 miles NE of Tamar. Lon. 22 54 E, lat. 48 10.

Nahant, peninsula of Massachusetts in the SW part of Essex county, united to the main shore by Lynn Beach. It is a delicious and much frequented summer retreat, from the neighbouring cities, and towns; 14 miles NE from Boston.

Nale, river of the palatinate of the Rhine, which running by Birkenfeld, Oberstein, Kreuzenach, and Bingen, fall into the Rhine.

Nairn, borough and seaport, the county-town of Nairnshire; seated at the entrance of the Frith of Murray, 10 miles E of Inverness, and 104 N of Edinburgh. Lon. 3 51 W, lat. 55 33 N.

Nairnshire, small county of Scotland, bounded on the N by Murray Frith; on the E and S by Murrayshire; and on the W by Inverness-shire. Its greatest length is not above 12 miles, nor its breadth above 10. It is fruitful, and its corn soon ripens, has several woods of firs, and several lakes and mountains, yet is well peopled. Its chief town is Nairn. Population in 1801, 8257; 1811, 8251; and in 1821, 9006.

Naksevan, city of Armenia, capital of a province of the same name, with an archbishop's see. It is seated between the towns of Erivan and Tauris. Lon. 45 30 E, lat. 39 40 N.

Namuri, mountain of Sicily, in the Val di-Demona, between Messina, Taormina, and Melazzo.

Namfia, island of the Archipelago, the ancient *Anaphe*, a little to the E of that of Santorini. It is 16 miles in circumference, but has no harbour, nor springs sufficient to water the fields. The inhabitants are all Greeks and their trade is in onions, wax, and honey. The ruins of the temple of Apollo are yet to be seen, and consist chiefly of marble columns. Lon. 26 10 E, lat. 36 15 N.

Namptwich, town of Cheshire, with a market on Saturday. It is well built, and has a large church, in the form of a cross, with the tower in the middle. Here are salt springs, on the banks of a fresh water stream, from which are made great quantities of white salt, in which article and cheese this town carries on a considerable trade. The principal dairies of Cheshire are in its neighbourhood. It is seated on the Weaver, 26 miles SE of Chester, and 162 NW of London. Lon. 2 25 W, lat. 53 6 N.

Namur, county of the Netherlands, divided by the river Sambre and Maese into three equal parts, bounded on the N by Brabant, on the E and S by the bishopric of Liege, and on the W by Hainault. This

province is pretty fertile; has several forests, marble quarries, and mines of iron, lead, and coal.

Namur, city of the Netherlands, capital of the county of Namur, between two mountains, at the confluence of the Maese and Sambre, 24 miles WSW of Liege, and 32 SE of Brussels. Lon. 4 50 E, lat. 50 29 N.

Nancy, city of France, capital of the department of Meurte, and a bishop's see. It is divided by a canal, into the old and new town. The first, though irregularly built, is rich and populous, and contains the palace of the ancient dukes of Lorraine; and their tombs are in a rich saloon, which adjoins the church of the late Cordeliers. The new town, whose streets are perfectly straight, was already one of the finest in Europe, before the magnificent works with which Stanislaus I, titular king of Poland, and duke of Lorraine, enriched it. The cathedral is a superb structure. It was taken by the Allies in 1814. Nancy is seated in a delightful plain, near the river Meurte, 92 miles NW of Basel, and 175 E of Paris. Lon. 6 10 E, lat. 48 42 N.

Nander, town of Hindoostan, in the province of Dowlatabad, 132 miles NNW of Hydrabad.

Nandidroog, strong fortress of Hindoostan, in Mysore. Since the restoration of the rajah, in 1799, it has been garrisoned by English troops. It is 25 miles N by E of Bangalore, and 64 ESE of Sera.

Nangasaki, city of Japan, in the island of Kuma, with a good harbour, and the only one in the empire in which foreign ships are permitted to anchor.—The inhabitants carry on a great trade with the Chinese and Dutch. The latter are never suffered to come into the city, unless when their ships arrive, and then they deliver up their guns and sails, as pledges of their good behaviour. Lon. 128 46 E, lat. 32 32 N.

Nangira, river. See *Yungar*.

Nangis, town of France, in the department of Seine and Merne, 12 miles W of Provins, and 14 E of Melun.

Nanjemoy, post town and port of entry, on Nanjemoy creek, Charles county, Maryland; 45 miles S from Washington.

Nan-kang, city of China, of the first rank, in the province of Kiang-si, seated on the lake Po-yang, 637 miles S of Peking. Lon. 113 58 E, lat. 29 33 N.

Nanking, city of China, capital of the province of Kiangnan. It is the largest in China, being 17 miles distant from the great river Yang-tse-Chiang, from which canals are cut, so large, that vessels may enter the town. It was formerly the imperial city, whence it is called Nanking, which signifies southern court; but since six grand tribunals have been removed to Peking, it is called Kiang-nan, in all public acts. The

place is greatly fallen from its ancient splendour; for it had a magnificent palace which is quite destroyed, as well as many ancient monuments; and a third part of the city itself is desolate. The streets are narrow, but handsome and well paved, and on each side are shops neatly furnished. The public buildings are mean, except a few temples, the city gates, and a tower of porcelain 200 feet high. They have several manufactures in silk and wool. The number of inhabitants is said to be 1,000,000, without comprehending the garrison of 40,000 men. Here the physicians have their principal academy. The inhabitants were formerly estimated at 2,000,000, the city being above 30 miles in circumference. It is situated on the Kiam, 500 miles SSE of Peking. Lon. 119 25 E, lat. 32 46 N.

Nan-ngan, city of China, of the first rank, in the province of Kiang-si. It stands among plantations of sugar-cane, near the source of the Kan-Kiang, and the foot of the mountain Me-lin, 200 miles NE of Canton, and 9000 SSW of Peking. Lon. 113 38 E, lat. 24 48 N.

Nan-ngan-fou, beautiful and populous city of China in the most southern part of the province of Kiang-si; it is a beautiful, populous and commercial city, and much frequented. It contains in its district, four cities of the third class. It is 200 miles N by E of Canton.

Nansemond, county of Virginia; bounded by Norfolk E; Gates county, North Carolina S; Blackwater river, or Southampton SW; Isle of Wight NW; and Hampton Roads NE. Length 33; mean width 20; and area 660 square miles. Surface generally level, and in part marshy. Drummonds pond, one of the feeders of the Dismal swamp canal, is in the SE angle of this county. Staples, cotton, and tobacco. Chief town, Suffolk.

Nansemond, river of Virginia, rising in the central part of Nansemond county; flowing NNE about 25 miles, opens by a wide bay into James river, and Hampton Roads. It is navigable to Suffolk for vessels of 100 tons.

Nantasket road, the southern entrance into Boston harbour. It affords good anchorage in from five to seven fathoms water.

Nan-tchang-fou, city of China, capital of the province of Kiang-si. It is the residence of a viceroy, and comprehends eight cities in its district.

Nantes, ancient rich and very considerable town of France, in the department of Lower Loire, and late province of Bretagne. The bridges over the Loire, in which are some islands, are almost a league in length. The suburbs are so large that they exceed the city. The inhabitants are computed at 60,000. Since the peace in 1783, Nantes has had a considerable share in the commerce with the United States. Large vessels can come no higher than port Lunan, where they are unloaded into smaller vessels which go up to Nantes, being a distance of 12 miles. In 1796, the theatre here took fire, during a time of performance, and several persons lost their lives. Nantes is 58 miles S by E of Rennes, and 217 SW of Paris. Lon. 1 45 W, lat. 47 13 N.

Nanticoke, river of Maryland, on the eastern side of Chesapeake bay. It rises in the state of Delaware, and runs nearly in a SW course through Dorchester county (Maryland) and enters the Chesapeake on the S side of Philips' point.

Nanticoke, hundred of Sussex county, Delaware, containing 2,843 inhabitants in 1810. It is watered by the Nanticoke river, from which it derives its name, and on the W and S it joins the state of Maryland. Population in 1820, 2335.

Nantmill, East, one of the northern townships of Chester county Pennsylvania, on the head waters of French creek 35 miles NW from Philadelphia. Population 1820, 1873.

Nantmill, West, township of Chester county, Pennsylvania, adjoining the preceding, and the SE angle of Berks, and NE angle of Lancaster county, on the head waters of the east branch of Brandywine. Population 1820, 1443.

Nantua, town of France, in the department of Ain and late province of Bresse, situated at the extremity of a great lake of the same name, 18 miles SE of Bourg. Here Charles the Bold was interred.

Nantucket, island of North America, in Massachusetts. The inhabitants of which have a considerable whale fishing on the coast, and even in Greenland. It lies to the S of Cape Cod, and is a low, sandy, barren island, the inhabitants depend almost entirely on the sea for their subsistence. It contains about 50 square miles, and forms a county, with some small islands. The employment of capital marks the pursuits of the people, \$600,000 are employed in upwards of 30 *Spermaceti* works. It contains also two banks, and two insurance companies.

Nantucket, post town and capital of the island of Nantucket, situated on a basin, the north side of the island, in the lat. of 41 18 N, and lon. of 70 10 W, at the distance of 120 miles SE of Boston. It is a port of entry. It has one fine harbour, completely safe from all winds, being so well land locked. It has only, however, at low water 7½ feet water on its bar.

Nantwich, town in Cheshire, with a market on Saturday. Here are salt springs, from which are made great quantities of white salt; also a manufacture of cotton and shoes. The principal dairies of Cheshire are about this town, and it has a considerable trade in cheese. It is seated on

the Weaver, and by the Chester canal, which here forms a broad basin, 26 miles SE of Chester, and 164 NW of London.

Nan-yang, city of China, of the first rank, in the province of Ho-nan, seated on a small river, and surrounded by mountains, 100 miles S of Ho-nan.

Nan-yong, city of China, of the first rank in the province of Quantong, seated on the Pei-kiang, near its source, 170 miles NNE of Canton.

Napaul, country of Asia, bounded on the S by Bahar, W by Oude and Rohileund, NW by Sirinagur, NE by the mountains of Himmaleh, which separate it from Tibet, and E by Bootan. It is tributary to Tibet; and Catmandu is the capital.

Naples, kingdom comprehending the S part of Italy, bounded on the NW by the Ecclesiastical Sta e, NE by the gulf of Venice, and every where else by the Mediterranean. It is 300 miles in length, by 100 in breadth, and divided into twelve provinces; namely, Terri di Lavarò (the ancient Campania Felix) Principato Citeriore and Ulteriore, Molise, Basilicata, Calabria Citeriore and Ulteriore, Abruzzo Citeriore and Ulteriore, Capitanata, Terra di Bari, and Terra d'Otranto; the last three forming the ancient Apulia, now called Puglia on the E side of the kingdom. After many revolutions, the Normans became masters of this country, in the eleventh century; and the sovereigns were called counts, then dukes, and afterward kings of Puglia. 1282, Peter III. King of Arragon, caused all the Normans in the island of Sicily to be massacred; and this massacre was called the Sicilian Vespers. After this, Puglia was joined to Sicily; and hence the sovereigns took the title of King of the Two Sicilies. It has also been called the kingdom of Naples, from its capital. France and Spain contended for the sovereignty in the sequel, and bloody wars and revolutions were the consequence. The French being defeated by the Spaniards in 1504, Louis XII. formally renounced all pretensions to the crown, and the country was governed by Spanish Viceroys. In 1647 happened the dreadful insurrection of Massaniello, in the city of Naples, by which the Spaniards were nearly expelled.—The people, however, returning to their allegiance, on the assassination of Massaniello, the Spaniards continued in peaceable possession of the kingdom till 1707, when it was conquered by prince Eugene, and ceded to the emperor by the treaty of Rastadt in 1714. It was recovered, however, by the Spaniards in 1734; and third son of the king of Spain became king of Naples and Sicily. The king of Naples joined the coalition which was formed against the French republic; but the rapid and unparalleled successes of

the latter, reduced him first to request an armistice, and on the 25th of October, 1797 to enter into a disgraceful treaty of peace. But after the celebrated battle of the Nile, the enmity of this court to the French, again began to revive; their warlike measures were, however, ill concerted; their forces were completely routed, and the king exiled from his kingdom. By the successes of Suwarrow, the king was restored; but in 1805, on account of his receiving some Russian and English troops into his dominions, the French again took possession of the country; and bestowed the crown on Joseph Bonaparte, on whose head it remained till 1808, when he was made king of Spain, and the kingdom was given to prince Murat, the brother-in-law of Napoleon Bonaparte. The island of Sicily, however, is at present detached from Naples, and retained by king Ferdinand, who is to have an indemnity for Naples, on the continent. The climate is extremely hot, especially in July, August, and September; and is said to be one of the most inconstant and unfavourable to valetudinarians. In some seasons it rains every day for six or seven weeks together; but the most disagreeable part of the climate is the sireoc or SE wind, which is very common in May, and extremely relaxing. In winter there is seldom any ice or snow, except on the mountains. The country abounds with grain, the finest fruits and vegetables, rice, flux, oil, wine, saffron, and manna; and affords alum, vitriol, sulphur, rock chrystal, marble, minerals, and fine wool and silk. Beside the manufactures noticed in the account of the city of Naples, waistcoats, caps, stockings, and gloves are also made of the hair or filaments of a shellfish, which are warmer than those of wool, and of a beautiful glossy green. The principal mountains are the Appennines, which traverse this country from N to S, branching out to the two extremities; and the celebrated volcano, mount Vesuvius. The rivers are numerous, but inconsiderable; the chief are the Garigliano and Volturno. One of the greatest inconveniences to which the kingdom is exposed is earthquakes. The established religion is the Roman catholic, and the clergy and convents, under the old government, possessed two-thirds of the whole kingdom; but protestants and Jews are allowed to settle here. The inhabitants of this country have, at all times borne but an indifferent character among other nations; gluttony is here a predominant vice, while instances of ebriety are comparatively rare. In the female sex, the passion for finery is almost superior to any other; and though chastity is not the characteristic virtue of the country, yet a Neapolitan woman would for the most part,

prefer a present to a lover. That furious jealousy, for which the nation was once so remarkable, is now greatly abated. The breach of the conjugal vow sometimes occasions quarrels and a sassination among people of inferior rank; and in the metropolis, assassinations are often perpetrated from much less cogent motives.

Naples, ancient large, rich, and trading city of Italy, one of the finest in the world, capital of the kingdom of the same name, with a university. It is situated at the bottom of a bay; and is built in the form of a vast amphitheatre, sloping from the hills to the sea. Although the style of architecture is inferior to what prevails at Rome, and it cannot vie with that city in the number of palaces, or in the magnificence of the public buildings, the private houses, in general, are better built, and the streets are broader and better paved. No street in Rome equals in beauty the Strada di Toledo at Naples; nor can any of them be compared with the beautiful streets which lie open to the bay, and here the excessive heat of the sun is often tempered with the sea-breezes and gales wafting the perumes of the Campagna Felice. The houses in general, are five or six stories high, and flat on the top, on which are placed numbers of flower vases, or fruit trees in boxes of earth, producing a very gay and agreeable effect. On the mountain of St. Elmo, in a most pleasant situation, is a convent of Carthusians, on which much expense has been lavished, to render the building, the apartments, and the gardens, equal to the situation. Naples is admirably suited for commerce, and has all the necessaries and luxuries of life in great profusion; and yet trade is but in a languishing condition. The chief articles manufactured here are silk stockings, soap, snuff-boxes of tortoise-shell, or of the lava of Mount Vesuvius; tables, and ornamental furniture, of marble. They are thought to embroider here better than in France; and their macaroni is preferred to that of any part of Italy. They excel also in liquors and confections; particularly in one kind of confection, called diabolonis, of a very hot and stimulating nature, and which is sold at a very high price. The number of inhabitants is computed at 350,000, which is very probable; for though Naples is not one-third of the size of London, yet many of the streets here are more crowded than the Strand; and a great proportion of the poorest sort are obliged to spend the night in them, as well as the day, for want of habitations. There is not a city in the world, per-

haps, with the same number of inhabitants, in which so few contribute to the wealth of the community, by useful and productive labour; the number of priests, monks, fiddlers, lawyers, nobility, footmen, and lazzaronis or vagabonds, is immense; and the last alone are computed at 30,000. The nobility are excessively fond of splendour and show, as appears by the brilliancy of their equipages, the number of their attendants, the richness of their dress, and the grandeur of their titles. The king, it is said, counts 100 persons with the title of prince, and still a greater number with that of duke, among his subjects. Six or seven of these have estates from 10 to 13,000*l.* a year; and a considerable number have possessions to about half that amount; while the annual revenue of many is not above 1000*l.* or 2000*l.* The inferior nobility are much poorer; many counts and marquises not having above 300*l.* or 400*l.* a year, of a paternal estate, many still less, and not a few enjoy the title, without any estate whatever. Although the churches and convents of Naples are not to be compared with those of Rome in point of architecture, they surpass them in rich jewels, and in the quantity of silver and golden crucifixes, vessels, and other ornaments. The cathedral is a grand Gothic edifice; and of all the palaces, that of the king is not only the most magnificent, but in the best style of architecture. The harbour, which is spacious, is protected by a mole. The bay of Naples is one of the finest in the world, being almost of a circular figure, about 30 miles in diameter, shut out from the Mediterranean by the island of Caprea, and three parts of it sheltered by the circuit of woods and mountains. Naples was taken by the French in January 1790, but retaken by the British fleet under Lord Nelson, in June following. In 1806, it was again taken possession of by the French, under Massena, and soon afterwards Joseph Bonaparte was here crowned king of Naples. In 1803, the city suffered much damage by an earthquake. Naples is 110 miles SE of Rome, 104 NE of Palermo, 217 SE of Florence, and 300 S by E of Venice. Lon. 14 20 E, lat. 41 55 N.

Naples, township and post village of Ontario county, New York, 18 miles S from Canandaigua. Population 1820, 1038.

Naploosc, or *Naploosc*. See *Nabulous*.

Napo, river of South America, rising in Quito, and flowing SE falls into the Amazon. Lon. WC 4 50 E, lat. 3 45 S.

Napoli di Malvasia, seaport of Eu-

ropean Turkey, and capital of the island of Malvasia. It has a fine harbour defended by a good citadel; and a long wooden bridge, which joins it to the mainland. It gives name to that excellent wine, called Malmsey; and was the ancient Epidaurus, famed for the temple of Æsculapius. It is seated on a rock, at the entrance of the bay of Napoli de Romania, 38 miles SE of Misitra. Lon. 22 58 E, lat. 36 53 N.

Napoli di Romania, seaport of European Turkey, in the Morea, and an archbishop's see, seated on a peninsula, at the head of a bay of the same name. It is inhabited by 60,000 Greeks, beside people of different nations; and has a large harbour, with a narrow entrance defended by a citadel. This town was taken by the Turks, in 1715. It is 20 miles SSW of Corinth. Lon. 22 44 E, lat. 37 44 N.

Nara, town of Japan, in the island of Nippon, with a magnificent castle, 25 miles NW of Meacow.

Narasingshapura, town of Hindoostan, in Mysore, with two considerable temples. It is well built, and stands in a fertile country, on the Cavery, immediately below the influx of the Kapini, 20 miles ESE of Mysore.

Narberth, town of Wales, in Pembrokeshire, with a market on Wednesday, seated on a hill, 12 miles NE of Pembroke, and 242 W by N of London.

Narbonne, city of France, in the department of Aude. Before the revolution of 1789, it was an archiepiscopal see. In the time of the Romans, it was the capital of that part of Gaul called Gallia Narbonensis; and here emperor Marcus Aurelius was born. Some Roman inscriptions, in different parts of the city, are still visible; and the canal from the river Aude, through the city, to the Mediterranean, was cut by the Romans. Narbonne is famous for its honey, and the cathedral is remarkable for its noble choir. It is five miles from the Mediterranean, and 80 ESE of Toulouse. Lon. 3 0 E, lat. 43 11 N.

Narborough, island of South America, on the coast of Chili, so called because Sir John Narborough refreshed his men here, when sent to the South Sea in the reign of Charles II. Lon. 74 35 W, lat. 45 0 N.

Narcondam, barren rock rising abruptly out of the Indian Ocean, uninhabited, and seemingly destitute of vegetation. It is about 20 leagues E of the Andamans.

Nards, episcopal town of Naples, in Terra d'Otranto. In this little town

there are 8000 inhabitants; it is 20 miles NW of Otranto. Lon. 18 16 E, lat. 40 18 N.

Narenta, town of Turkey in Dalmatia, with a bishop's see, seated on a gulf of the same name, 46 miles NE of Ragusa. Lon. 18 27 E, lat. 43 35 N.

Narnalia, town of the Deccan, in the province of Berar, 72 miles E of Burnampour. Lon. 77 34 E, lat. 21 25 N.

Narni, ancient episcopal town of Italy, in Sabina. Here are the ruins of a marble bridge, built by Augustus, one of whose arches was 150 feet high, and 200 broad; as also of an aqueduct that brought water from a spring at the distance of 15 miles. It contains a great many noble families, and is seated on the Nera, 20 miles SW of Spoleto, and 40 NE of Rome.

Narova, river of the Russian empire, which issues from the lake Poupas, and watering Narva, flows into the gulf of Finland, eight miles below that town. It is noted for two picturesque waterfalls, pompously described by travellers, but far inferior to that of the Rhine, at Schaffhausen. The breadth of the river is about 200 feet, and the perpendicular height of the falls scarcely exceeds 20 feet.

Narragansett, beautiful bay of the United States in Rhode Island. It opens between Point Judith on the W, and Seaconet to the E, and extending from S to N 30 miles to the city of Providence, where it terminates, and receives Pawtucket and some smaller rivers. It varies in width from one to fifteen miles; and is chequered by Rhode Island, Prudence, and Conanicut. One of its minor bays, Mount Hope, receives Taunton river from Massachusetts. The shores are bold, without being very elevated, and the adjacent country picturesque, and well peopled. It was the opinion in 1817, of the United States Navy Commissioners, that this bay afforded the most eligible site for a naval depot NE from the Chesapeake.

Narraguagus, bay of Washington county, Maine, receiving a small river of the same name, from the NW part of the county.

Narraguagus, post town, Washington county, Maine, on the Narraguagus, 37 miles W from Machias. Population 1820, uncertain.

Narrows, *The*, strait that separates Long Island from Staten Island, and unites the Atlantic Ocean with the bay of New York.

Narsingapatan, a town of the peninsula of Hindoostan, in the territory of Bishnagar. It was the residence formerly

of a king, and is situated 400 miles SE of Bombay. Lon. 76 10 E, lat. 15 30 N.

Narva, a strong town of the Russian empire, in Ingria, or the government of Petersburg. The houses are built of brick, stuccoed white; and it has more the appearance of a German than of a Russian town. In the suburbs, called Ivangorod, or John's town, the colossal remains of an ancient fortress, built by Ivan Vassilievitch the Great, impend in a picturesque manner over the steep banks of the Narova. Near Narva is the spot celebrated for the victory which Charles XII. in the 19th year of his age gained over the Russian army in 1700. The town was taken by the czar about five years after, who traversed the streets on horseback with his drawn sword in his hand, restrained his troops from pillage, and placed guards at the doors of the principal houses, and before the churches. The principal exports from Narva are hemp, flax, timber, and corn; the imports, salt, tobacco, wine, salted herrings, spices, tea, sugar, and other grocery wares. It is situated on the Narova, eight miles from its mouth, and 100 W of Petersburg. Lon. 27 52 E, lat. 59 18 N.

Narwah, or *Narwha*, a town of Hindoostan Proper, in the province of Agra, seated a little above the confluence of the Sindu with the Jamna. It is 127 miles S of Agra. Lon. 79 17 E, lat. 25 40 N.

Naseby, village in Northamptonshire, famous for the decisive victory gained by the army of the parliament over that of Charles I. in 1645. It is 12 miles N of Northampton.

Nash, county of North Carolina; bounded by Edgecomb E and SE; Wayne S; Johnson SW; Franklin NW; and Halifax NE. Length 30; mean width 18; and area 540 square miles. Surface moderately hilly, and soil near the streams productive. Staples cotton, and tobacco. Tar river flows through nearly the middle of the county. The court-house, at which there is a post office, is about 40 miles NE by E from Raleigh.

Nashuan, one of the Elizabeth islands, Massachusetts, near the mouth of Buzzard's bay.

Nashua river, rises in Worcester county, Massachusetts, flows NE across the north west angle of Middlesex; enters New Hampshire, and falls into the Merrimack in Hillsborough county.

Nashville, post town, and seat of justice, Davidson county Tennessee, on the left bank of Tennessee river; 200 miles W from Knoxville, 430 NE from Natchez; and 180 NNE from New Orleans by General Jackson's road. Lon. W C 9 40 W, lat. 38 4 N. It is the central point of a very fertile, well cultivated, and populous country. Cumberland river is navigable, except at very low water for steam boats to this town; one or more of these vessels ply between there and New Orleans. It contains beside the ordinary county buildings two printing offices; two banks, an academy for young ladies, and several manufactories. Population about 4000.

Nassau, country of Germany in the circle of the Upper Rhine; bounded on the N by Westphalia, on the E by the county of Solmes, on the S by the territory of Mentz, and on the W by Treves. It is very fertile, and contains mines of iron, copper, and lead. This small territory was formerly known by various names, but now united into a duchy, with an independent sovereign duke. Area about 2200 square miles, and 300,000 inhabitants.

Nassau, town of Germany, in the duchy of the same name, on the river Lahn, 12 miles SE of Creblentz. Lon 7 42 E, lat. 50 18 N. It is held in common, between the prince of Nassau and king of the Netherlands,

Nassau, river of Florida, rising between St. John's and St. Mary's rivers,

and flowing parallel to each, falls into the Atlantic Ocean between Talbot, and Amelia islands, after a comparative course of about 70 miles. Nassau capital of the island of New Providence. Lon. W C 6 50 W, lat. 24 55 N.

Nassau, post town, and township Rensselaer county, New York, 15 miles SE from Albany. Population 1820, 2873.

Nata, or *Santiago de los Caberellos*, city of North America, in Veragua. Lon. W C 3 17 W, lat. 8 22 N.

Natchez, principal town in the state of Mississippi and the seat of justice for Adams county, lies upon the left bank of the Mississippi river, at lat. 31 33 N, and lon. W C 14 30 W. The site is a beautiful and commanding bluff, rising from one to two hundred feet above the Mississippi river; and by its peculiar location is protected from the noisome exhalations of the adjacent low grounds. The edge of the bluff rises into a long narrow ridge, which renders the Mississippi river invisible from the streets of the town. It contains 280 dwelling houses, four places of public worship, one for Roman Catholics, one for Presbyterians, one for Methodists, and one for Baptists; six large warehouses; an elegant court-house, and jail; 25 dry good stores, two steam saw mills, and a steam aqueduct. A state bank, with a capital of 900,000 dollars; having offices in Woodville and Port Gibson. This is the only banking institution in the state, and by its charter the faith of the state is pledged not to grant any other banking charter until 1840.

The sessions of the Supreme court, and of the District court of the United States, are held at present at this place.

During about nine months of the year, from October to the ensuing June, Natchez is a very lively scene of commercial activity. Immense quantities of produce from the regions on Ohio, Mississippi, &c. find here a ready and profitable market. The cotton shipped from this port in ordinary seasons, exceeds 35,000 bales. The entire cotton shipped from the whole state in 1820—21, was estimated at 80,000 bales; and that for 1821—2, supposed will be at least equal to that of the preceding year.

The bills of mortality reported under the superintendence of the board of health, justify the opinion that Natchez is healthy for residents. In sultry summers, the greatest number of deaths are amongst persons engaged on the navigation of the Mississippi river.

The following table exhibits the actual and progressive population of this city.

Natchez is governed by a mayor, alderman, and city council, with the ordinary county justices of the peace, who have in ordinary, civil and criminal jurisdiction concurrent power with the aldermen. It is 322 miles by water, and 156 by land above New Orleans, 1613 below Pittsburg, 846 below St. Louis, and 670 below the mouth of Ohio.

Natchitoches, NW parish of Louisiana; bounded by Texas SW and W; Arkansas territory N; Washita parish E; Rapides SE, and Opelousas S. Length 140; mean width 75; and area 10,500 square miles. Surface generally hilly, particularly between Red and Sabine rivers. Except near the margin of Red river, the soil is generally sterile, and covered with pine timber. Some other, though comparatively small tracts of productive soil skirt the streams. An extensive body of low ground, subject to annual submersion, extends along Red river, and runs through this parish obliquely. The greatest part of the inhabitants are settled on the alluvial banks of Red river. The soil upon the margin of the Sabine is in very few places fit for culture. Beside Red and Sabine, the rivers of Natchitoches are Bodcau, Dacheet, Black river, and Saline. Chief staples, cotton, lumber, and peltry. Chief town, Natchitoches.

Navarin, seaport of European Turkey, 693

on the W coast of the Morea, with a large harbour defended by two forts. In 1770, it was taken by the Russians. It is seated on a hill, 10 miles N by E of Molon, and 17 WNW of Corin. Lon. 21 34 E, lat. 37 2 N.

Navarre, kingdom of Europe, lying between France and Spain, and divided into the Upper and Lower. The Upper belongs to Spain, and is 75 miles long and 60 broad. Though a mountainous country, abounding in game and iron mines, some valleys produce good corn and excellent wine. It is divided into five districts, whose chief towns are Pamplona, Estella, Tudela, Olita, and St. Giesca. Lower Navarre belongs to France, and is now the department of Lower Pyrenees. It is separated from Spanish Navarre by the Pyrenees, and is a mountainous, barren country, 20 miles long and 12 broad. From this country the king of France takes his title of king of Navarre. See *Palais, St.*

Navarre, New, province of New Mexico, bounded on the N by a country unknown; E by New Mexico Proper and New Biscay; S by Culacan, and W by the gulf of California. This country was discovered by the Spaniards in 1552. The natives are robust and warlike, and were with difficulty brought to submission; they make use of bows with poisoned arrows, clubs of red wood, and bucklers. The chief Spanish town is Cinaloa.

Navarreins, town of France, in the department of Lower Pyrenees, seated on the Gave d'Oleron, 26 miles SE of Bayonne.

Navigator's Islands, a cluster of ten islands in the Pacific Ocean, discovered by Bougainville, and explored by Prouse in 1787. They are called by the natives Opoun, Leone, Fanfoue, Maouna, Oyalava, Calinasse, Pola, Shika, Ossamo, and Onero. Opoun, the most southerly and easterly of these islands, lies in lon. 169 7 W, lat. 14 7 S. Maouna, Oyalava, and Pola, may be numbered among the largest and most beautiful islands of the South Pacific Ocean. They combine the advantages of a soil fruitful without culture, and a climate that renders clothing unnecessary. The inhabi-

tants are a strong and lusty race; scarcely a man to be seen among them less than six feet high, and the women are in proportion. See *Maouna*.

Nackow, town of Denmark, in the isle of Laland, with a harbour commodious for trade, and a plentiful fishery here. It is 60 miles SW of Copenhagen. Lon. 11 31 E, lat. 54 52 N.

Naxos, or *Naxia*, considerable island of the Archipelago, 25 miles in length and 88 in circumference. It abounds with orange, olive, lemon, cedar, citron, pomegranate, fig, and mulberry-trees; and though it has no harbour, carries on a considerable trade in barley, wine, oil, cheese, figs, cotton, silk, flax, salt, oxen, sheep, and mules. It is inhabited both by Greeks and Latins, has four archiepiscopal sees, and a great many villages; but the whole island does not contain above 8000 inhabitants, the highest mountain is Zia, which signifies the mountain of Jupiter. This island was anciently famous for a sort of marble called ophitus, from its being spotted like the skin of a serpent, with green and white spots. On the mountains near the coasts of the Mediterranean is found the best emery, whence the neighbouring promontory is by the Italians called Cape Smeriglio. On the S side of the island is a town defended by a castle. About a gunshot from hence is a fine marble tower on a rock, in the middle of a heap of stately ruins of marble and granite, probably the remains of Bacchus's temple. Lon. 26 10 E, lat. 36 41 N.

Naxos, or *Naxia*, capital of the isle of Naxos, with a castle and two archiepiscopal sees, the one Greek and the other Latin. The greatest part of the inhabitants are Greeks. Lon. 25 59 E, lat. 37 8 N.

Nelson's ferry, post office, 50 miles N from Charleston, South Carolina.

Nelson's Fort, a British factory at the mouth of Nelson's river. Lon. W G 15 42 W, lat. 57 12 N

Nelson's river, large river of North America in Cabotia, or British America. According to all our maps it is very difficult to determine either the length or real source of either the Nelson or Severn rivers; both are made to be outlets of lake Winnipic; and consequently the Assiniboin, and Saskatchewan, are the common sources of both the former streams. Taken as a whole, these united waters form the third largest river system of North America, draining an area, of upwards of 1000, by 400 miles, or 400,000 square miles.

Nelsonville, village of Athens county, Ohio, on Hocking river, 14 miles W from Athens.

Nemaha, name of two small rivers of the United States, falling into the Missouri, between the Platte and Kansas rivers.

Nemæa, village of the Morea, famous for the Nemæan games anciently celebrated here.

Nemours, town of France in the department of Seine and Marne and late province of the Isle of France, with an old castle, between two hills. It is seated on the Loing, 10 miles S of Fountainbleau, and 15 SE of Paris. Lon. 2 37 E, lat. 48 16 N.

Nen, the principal river of Northamptonshire, which rises in the W part of the county. It is made navigable at Northampton, leaves the County at Petersborough, and crossing the isle of Ely, forms part of the W boundary of Norfolk, and falls into the Lincolnshire Wash. It likewise communicates by several channels, with the Great Ouse.

Nen, river of Upper Canada, empties itself into lake Ontario, in the township of Pickering; it runs for a considerable distance in the country through Pickering, Markham, &c, crossing the Yonge-street, and apparently rising in the vicinity of one of the branches of Holland's river, with which it will probably, at some future period, be connected by a canal. This river abounds with fish; at its embouche are good intervals for meadow ground, and it is the back communication from the German settlement in Markham to lake Ontario.

Neocastro, fort of Turkey in Europe, in Romania, where the Turks always keep a good garrison. It is seated in the middle of the strait of Constantinople, 12 miles from that city. Lon. 29 4 E, lat. 41 10 N.

Neot's St. town in Huntingdonshire, with a market on Thursday. It is a well built town, has a considerable church, with a fine steeple, and a considerable trade in coal. It is seated on the Ouse, over which is a fine stone bridge, 20 miles WSW of Cambridge, and 56 NNW of London. Lon. 0 30 W, lat. 52 7 N.

Nepanose, Lycoming county Pennsylvania. See *Nippenose*.

Nepaul, long narrow kingdom of northern Hindoostan, bounded on the N by the Himalah mountains; S by Bahar Oude and Delei; and E by Bootan. Capital, see *Napant*.

Nepean Island, island of the South Pacific Ocean, opposite Port Hunter, on the S coast of Norfolk Island, consisting entirely of one mass of sand, held together by the surrounding cliffs, which are a border of hard rocks. The surface was covered with a kind of coarse grass, and upwards of 200 fine pines were growing on it.

Nepean, township in the eastern district, is the eighth township in ascending the Ottawa river, and the first township on the west side of the river Rideau, Upper Canada.

Nerac, town of France in the department of Lot and Garonne, and late province of Guienne. It is situated on the river Baïse, which is navigable here, and is divided by that river into great and little Nerac. In the 16th century, the greatest part of its inhabitants embraced the reformed religion, but were obliged to sur-

sender to Louis XII. in 1631. Nerae is 29 miles SW of Agen, and 360 S by W of Paris. Lon. 0 15 E, lat. 44 2 N.

Nerbudda, river of India, which issues from a lake on the southern confines of the province of Malabar, forms the boundary between Hindoostan Proper and the Deccan, and falls into the gulf of Cambay, below Baroach.

Nericia, a subdivision of Sweden Proper, bounded on the N by Westmania, on the E by Sudermania, on the S by East Gothland, and on the W by West Gothland. Orebo is the capital, and the most considerable place in it.

Nero, island in the East Indies, the second of the Banda Islands, where the Dutch have a fort called Fort Nassau. Here are large serpents, but not venomous, and the mountains are covered with trees, in which are birds of a very singular kind. Lon. 129 45 E, lat. 4 40 N.

Nerchinsk, one of the four provinces of the Russian government of Irkutsk. Its capital, of the same name, is seated on the Nercha, which falls into the Schilka.

Nescopeck, river of Luzerne county, Pennsylvania, which rises in the southern part of the county and flows nearly W into the Susquehannah, opposite the town of Berwick.

Nescopeck mountain, on the north side of Nescopeck creek, is a range nearly of the same height with those of Wyoming, and parallel to them. It forms a regular and almost unbroken ridge, nearly destitute of timber on its summit, it extends from the Susquehannah nearly to the Lehigh.

Nescopeck, township of Luzerne county, Pennsylvania, on the left bank of Susquehannah river, above and below Nescopeck creek. Population 1820, 1034.

Nescopeck, post town of Luzerne county, Pennsylvania, on the left bank of Susquehannah river above the mouth of Nescopeck creek, and opposite Berwick.

Neshaminy, river, of Bucks county, Pennsylvania, rising with the Tolecon and Perkiomen, and flowing SE falls into the Delaware in the SE angle of the county four miles below Bristol.

Neshanock, large creek rising in the central part of Mercer county, Pennsylvania, and flowing SW, falls into Big Beaver, below the village of Newcastle, on the border of Beaver county.

Neshanock, township of Mercer county, Pennsylvania, above the mouth of Neshanock creek. Population 1820, 1823.

ness-shire, 22 miles in length, and for the most part, one in breadth, though sometimes two. It is sheltered on the NW by the high mountains of Urquhart and Malfourvoney, and edged with coppices of birch and oak.

Nershinsk, town of Siberia, capital of a province of the same name, but sometimes called Daouria, in the government of Irkutsk, with a fort. The adjacent country is mountainous, but yields excellent pasture for cattle; and there are some considerable lead and silver mines. It is seated at the conflux of the Nercha with the Shilka. 440 miles E of Irkutsk. Lon. 117 34 E, lat. 51 52 N.

Netchez, river of Texas, rises at lat. 32 N, and lon. W C 17 30 W. It is formed by several branches, the principal of which are the Ayeish, Attoyeaque, Attascocite, Cariso, Nana, and Angeline. It flows a little E of S, and falls into Sabine lake, after a comparative course of about 170 miles. The country drained by the Netchez though generally sterile is yet superior to that watered by the Sabine. This river is often called, though erroneously, Rio Nieves, or Snow River. Its name is derived from a tribe of Indians.

Netherlands, or *Low Countries*, country of Europe, anciently called Gallia Belgica, 261 miles in length, and from 100 to 200 in breadth; bounded on the W and N by the German Ocean, E by Germany, and S by France. In the ninth century, the sons of emperor Lewis the pious, having divided the dominions of their father, who possessed Germany, France, and Italy, a new kingdom was formed, comprehending Germany and France, and a part of the Netherlands. It was called Lothario, but did not long subsist; for it was soon divided into two; and that seated near the Mediterranean was called the kingdom of Burgundy; while the other to the N, had the name of Austrasia. Neither did this last continue long, it being divided into 17 provinces, under different names, exclusive of the territories of Liege and Upper Guelderland; but they still depended on the empire of Germany, and were called Lower Germany. In process of time, the house of Burgundy purchased many of them, and was about to form them, with Burgundy, into a kingdom; but Charles the bold, the last duke of Burgundy, being killed by the Swiss in 1477, his part of the Netherlands devolved on Mary, his only child; by whose marriage with emperor Maximilian, the Netherlands were an acquisition to the house of Aus-

tria. Emperor Charles V. king of Spain, in 1555, abdicated the sovereignty of the Netherlands, and soon after, the Spanish crown, in favour of his son Philip, The tyranny of this cruel bigot, Philip II. who endeavoured to introduce the inquisition into the Low Countries, with the barbarities exercised by the duke of Alva, exasperated the people to such a degree, that they threw off the Spanish yoke, and under the conduct of William I. prince of Orange, formed the famous league of Utrecht, in 1579, which proved the foundation of the Republic of the Seven United Provinces. After a long war (with the interval of a truce of twelve years) Philip IV. expressly acknowledged the independence of these provinces, by the treaty of Westphalia, in 1648. The other ten provinces, namely, Brabant, Antwerp, Malines, Namur, Limburg, Luxemburg, Hainault, Flanders, Artois, and Cambresis, returned under the dominion of Spain, but with very favourable stipulations with respect to their ancient liberties. On the accession of a branch of the house of Bourbon to the Spanish monarchy, it was stipulated, in 1714, that the Spanish Netherlands should return to the German branch of the house of Austria; but some considerable parts were obtained, by conquest or cession, by the French and Dutch. The Dutch had part of Brabant, Limburg, and Flanders: the French had Artois and Cambresis; with part of Hainault, Flanders, and Luxemburg. Austria held the rest; and the the provinces of Antwerp and Malines were included under the name of Austrian Brabant. In 1788, emperor Joseph II. having projected many innovations, and enforcing them with violence, a universal spirit of revolt broke out; an army of 40,000 men rose as if by magic, to support the renunciation of all allegiance, which several of the provinces openly made; a congress was formed from the different states, in whom the supreme government was vested; and by the end of 1789 the Austrians were expelled. The new government, however, was not of long duration; for Leopold II. (the successor of Joseph) was enabled, partly by conciliatory measures, and partly by the mediation of Great Britain, Prussia, and Holland, to recover the entire possession of his authority; the mediating courts having guaranteed the restoration of the ancient Belgic constitution. In 1792 the French over-ran the Austrian Netherlands; they were driven out of the country in 1793; but they returned in 1794, and subdued every part of it; and in 1795 decreed it, with the

territories of Liege and Upper Guelderland, an integral part of the French republic. To this country they gave the name of *Belgium*, and divided it into nine departments; but in 1814, agreeably to the treaty of Paris, they evacuated all that part which formerly belonged to Austria and Holland. The Netherlands, or Belgium, is 170 miles long and 90 broad; bounded on the N by Holland, E by Germany, SW by France, and NW by the German Ocean. The principal rivers are the Scheldt, Meuse, Dyle, Sambre, and Lis; and there are many fine navigable canals. The air is temperate, and the soil extremely fertile; but the mouths of the rivers and harbours are frozen in winter. Brussels is the chief town. See *Holland*, or *Dutch Netherlands*

Netherlands, kingdom of Europe, formed in 1814, and containing 17 provinces, or 18, if the grand duchy of Luxemburg is included. It lies between lat. 49 30, and 53 34 N. and between lon. 2° 30, and 7° E from London. It is bounded NW by the German Sea, SW by France, and E by Germany. The government of the Netherlands is a limited monarchy, with great resemblance to that of England; but the principles of civil liberty much more respected in the latter than in the former. In one very important particular the government of the Netherlands approximates more to that of the United States, than any other in Europe. Each province has its own assembly where municipal concerns are regulated independent in an extensive degree of the general government. With all this specious appearance, however, the people of the Ne-

therlands have but little influence over the acts of the crown. The person of the king is inviolable; and all bills must emanate from his cabinet. The members of the upper house are nominated by the king and hold their offices for life, though their titles and office are not hereditary. The freedom of the press is tolerably secured, and no religious test required for office.

The succession to the crown fixed in the family of Nassau Orange, and title of the monarch "king of the Netherlands; prince of Orange;" and as a member of the Germanic confederacy, "grand duke of Luxemburg."

The kingdom of the Netherlands has six universities, which are Leyden, Utrecht, Groningen, Louvain, Ghent, and Liege. The four former were ancient, the two latter instituted by the present government. There exists also, a naval school at Helvoetsluys, and a military school at Dort.

The annual revenue and expenditure of this kingdom amounts to about 7,000,000 pounds sterling or about 30,000,000 of dollars. The colonies of the Netherlands are extensive and highly important; they consist of 1st, in Asia, Java, Amboyna, Ternate, Banda, Malacca, and Macassar; with factories on the Coremandel coast and in Persia. In Africa, 12 or 13 small forts on the coast of Guinea. In South America, Surinam. In the West Indies, the islands of Curragoa, St. Eustatius, and St. Martin.

Netschkau, town of Upper Saxony, in Voigtland, situated on the Golsch, 12 miles SW of Zwickau.

Nettuno, town of Italy, in Campagna di Roma, near the ruins of the ancient Antium, at the mouth of the Liracina, 24 miles S by E of Rome.

Neva, river of Russia, which issues from the lake Ladoga, and flows to Petersburg, where it divides into several branches, and enters the gulf of Finland at Cronstadt. It is formed by the drain of the vast low country NE from St. Petersburg, and conveys to the gulf of Finland the waters of lakes Ladoga, Onega, and many others. It is only called the Neva between lake Ladoga, and the gulf of Finland.

Nevada, *Sierra de*, chain of mountains in the south of Spain. Wherever the adjective Nevada, is annexed to Spanish mountains, it signifies that they are covered with perpetual snow. The Sierra de Nevada, of Granada rises in one peak, the Muley Hassen, to 11,250 feet, and in another the Veleta, to 10,985 feet above the Ocean level. The Muley Hassau is

the highest mountain in Europe west from Mount Blanc.

Neuburg, fortified town of Bavaria, capital of the principality of the same name. It stands on a hill, on the Danube, and has two gates, but the fortifications are chiefly gone to decay. The castle is a large building, and contains a hall of extraordinary size, embellished with portraits. It is 32 miles NNE of Augsburg, and 60 SW of Amberg. Lon. 11 13 E, lat. 48 43 N.

Neuchateau, town of France in the department of Vosges; seated in a soil fertile in corn and good wine, on the river Meuse, 25 miles SW of Nancy.

Neuchatel, territory of Swisserland, which, with that of Vallengin, forms one principality, between the lake of Neuchatel, and the borders of France; extending 36 miles from N to S, and 18 in its greatest breadth. By the death of the duchess of Nemours, in 1707, the sovereignty of Neuchatel and Vallengin was claimed by Frederick I. of Prussia, as heir to the prince of Orange; and his right was acknowledged by the states of the country.

Neuchatel, town of Swisserland, capital of a principality of the same name. It contains not more than 3,000 souls, and is situated partly on the plain between the lake of Neuchatel and the Jura, and partly on the declivity of that mountain. The chief article of exportation is wine, which is much esteemed, and produced from the vineyards in its vicinity; and there are here manufactures of printed linens and cottons. Among the many public works which have been lately executed here, are the new town-house, and a superb causeway leading towards the valley of St. Imier. Neuchatel is governed by a great and little council; the first is composed of 40 persons; the second consists of 24 members, comprehending the mayor, who is president. It is 25 miles NE of Lausanne, and 25 W of Bern. Lon. 7 0 E, lat. 47 5 N.

Neuchatel, or *Yverdun*, lake of Swisserland, which takes its name from a town of the same name, stretches about 20 miles in Length from the town of Yverdun to that of Neuchatel, in a direction from SW to NE, at which extremity it has a communication with the

lake of Bienne by a narrow outlet, and is 17 miles long, and 5 broad.

Nevern, village in Pembrokehire, near a river of the same name, one mile NE of Newport. There are several monuments of antiquity in this parish, and among the rest a single stone, of a square form, 13 feet high and two broad, with a circular top, charged with a cross, and all the sides are neatly carved with knot work of various patterns.

Nevers, considerable episcopal town of France, in the department of Nièvre, and late province of Nivernois, seated on the Loire, over which it has a handsome bridge. The town is built in the form of an amphitheatre, containing many elegant buildings, among which is the ancient palace, in which John Casimer, king of Poland, expired in 1672. It is 145 miles SE of Paris. Lon. 3 14 E, lat. 46 59 N.

Neufchatel, town of France, in the department of Lower Seine, and late province of Normandy, noted for excellent cheese, commodiously seated on the river Arques, 20 miles SE of Dieppe, and 75 NW of Paris. Lon. 1 30 E, lat. 49 46 N.

New Britain, township of Bucks county, Pennsylvania, containing 1474 inhabitants in 1810, and in 1820, 1082. It is situated on Neshaminy creek, between Hilltown and Doylestown.

New Brownsville, new town in Wayne county, Ohio, on Jerome's fork.

New Brunswick, post town and city in Middlesex county, New Jersey, on the S bank of the river Rariton, 50 miles NE of Trenton, and 36 SW of the city of New York.

By some inadvertance, the original article New Brunswick, in Brook's Gazetteer, was inserted in this edition. This article is very defective, and I wish the reader to consider it cancelled, and this used in its place.

This city, beside the ordinary county buildings, has five places of public worship for Presbyterians, Episcopalians, Methodists, Baptists, and Dutch reformed, each one.

Queen's college, was formed by the Dutch reformed church, and intended for the education of their clergy. It was incorporated in 1770, and since 1810, has been in some respects connected with a Theological school, founded in the same city.

The site of New Brunswick, rises gradually from the bank of Rariton river. The adjacent country is pleasantly diversified and well cultivated. The tide rises some little distance above the town, and steam boats, when not prevented by ice, ply regularly between that place and New York.

Newburg, corporate town in the isle of Oransey, with a market on Tuesday. It is governed by a mayor, and seated on the river Brant, 15 miles SW of Beaumaris, and 257 NW of London. Lon. 4 27 W, lat. 53 10 N.

Newburg, post town and township of Orange county, New York, containing 4627 inhabitants in 1810, and in 1820, 5812. It is situated on the W side of Hudson river, five miles N of West Point, and 95 S of Albany. This is one of the most pleasantly situated towns on the Hudson. The bank rises by a rather bold acclivity, giving a fine view of the river, opposite shore, and adjacent mountains. Any vessel that can pass the bar at Sandy Hook, can reach Newburg. Its trade is active and increasing.

Newburg, populous and wealthy post township in Cuyahoga county, Ohio, immediately S from Cleveland, containing 756 inhabitants in 1820.

Newburn, petty village in Northumberland, on the W side of Newcastle, inhabited by Colliers. Here a part of the army of Charles I under lord Conway, were defeated by the Scotch in 1540.

Newbury, corporate town in Berkshire, with a market on Thursday, its poor are chiefly employed in spinning. Two battles were fought near this town with dubious success, between the forces of Charles I. and the parliament, in 1643, and 1644. Newbury is commodiously seated on the river Kennet, 26 miles S of Oxford, and 56 W of London. Lon. 1 12 W. lat. 51 25 N.

Newbury, post town, the capital of Orange county, Vermont; situated on the W side of Connecticut river, 40 miles N of Dartmouth college, and five NW of Haverhill, in New Hampshire; it contains 1363 inhabitants, in 1810.

Newbury, township of Essex county,

Massachusetts, opposite Salisbury. Population in 1820, 3671.

Newbury, township and post village of York county, Pennsylvania. The township is on the point between Susquehanna river and Conewago creek, and the village five miles NW from York Haven. Population in 1820, 1794.

Newbury, township of Geauga county, Ohio. Population in 1820, 337.

Newbury, NW township of Miami county, Ohio. Population in 1820, 542.

Newbury-port, considerable port of entry and post town, in Essex county, Massachusetts; situated at the mouth of the river Merrimack, in lat. 42 47 N, lon. 70 47 W, 40 miles N from Boston, and 22 SW from Portsmouth, in New Hampshire. The site of Newberry-port is a gentle acclivity giving a pleasing aspect to the place, which is heightened by the regularity of the buildings and streets. It contains two banks, two insurance offices, and six or seven places of public worship. In point of foreign commerce it is the third in the state. In 1815 its shipping amounted to near 25,000 tons.

Newby's cross roads, post office, Culpepper county Virginia.

New Canaan, post town, Fairfield county, Connecticut, about 30 miles WSW from New Haven. Population in 1810, 1600, and in 1820, 1682. It contains an academy.

New Canton, post village, Buckingham county, Virginia; on the right bank of James river, 55 miles by land above Richmond.

New Carlisle, town and capital of Gaspe county, Lower Canada, on Chaleur bay.

Newcastle, county of Delaware; bounded by Delaware river E; Kent county in Delaware S, Kent and Cecil counties in Maryland SW; Chester county in Pennsylvania NW; and Delaware county in Pennsylvania NE. Length 36; mean width 12; and area 432 square miles. The surface of this county is generally decorated with hill and dale, though the northern section is more broken than that of the south. The projected canal to unite the Delaware and Chesapeake bays is to pass across this county. The line of separation between the primitive and the sea sand alluvial formations, enters the NE angle of New Castle near Delaware river, and ranging SW, merges into Maryland between Glasgow and Frenchtown. Brandywine river, and Red, and White Clay creeks, rise in Chester county Pennsylvania, and flow, nearly S, fall over the primitive ledge into Christiana. The latter rises also in Pennsylvania, and crossing the NE angle of Maryland, flows nearly S, between Elk river, and Whiteclay creek, falls also over the ledge, and thence, turns to NE along its outer

verge to Wilmington. This range of falls render the water facility found in New Castle county for the propulsion of machinery, equal to any other of equal extent in the United States. This natural advantage has been extensively improved on the Brandywine in particular. The principal staple of New Castle is flour. Chief town Wilmington. See *Brandywine*.

Newcastle, town in Carmarthenshire, with a market on Friday. It is a poor town, and its once fine castle is now in ruins. It is seated on the Tyry, 17 miles NW of Carmarthen, and 219 WNW of London. Lon. 4 30 W lat. 52 4 N.

Newcastle under Line, borough in Staffordshire, with a market on Monday. It had four churches, now reduced to one; and the castle, whence it took its name, is quite demolished. It has a manufacture of hats, is governed by a mayor, and sends two members to parliament. It is a large place with broad paved streets, and is famous for more stone-ware being made near it than at any place in England. It is on a rivulet, 15 miles from Stafford, and 149 NNW of London. Lon. 2 2 W, lat. 53 12 N.

Newcastle, or *Newcastle upon Tyne*, large borough and seaport in Northumberland, situated between the Picts Wall and the Tyne. The river is so deep, that ships of 600 tons burthen may come up to the town

in ballast, but the colliers wait at Shields for their lading which is brought down the river in lighters, the great collieries which have for centuries supplied London and most of the southern parts of the kingdom with coal. This is the staple trade of, and has been the source of great wealth to Newcastle, the coals carried thence annually are computed to amount to 1,187,000 tons; it also manufactures steel, iron, glass, woollen cloth, earthen ware, white lead, milled lead, &c. to a great extent, and here is a round tower for the manufactory of patent shot; it exports large quantities of lead, salt, salmon, butter, tallow, and is particularly famous for its grindstones, that scarce a vessel goes from thence without some of them. Newcastle was made a borough by William I. and the first charter for digging coal was granted by Henry III. in 1239. It is 34 miles S of Almwick, 94 N of York, and 271 N by W of London. Lon. 127 W, lat. 55 3 N.

Newcastle, post town and the capital of Newcastle county, Delaware, situated on the W bank of Delaware river, six miles S of Wilmington, and 34 SW of Philadelphia. Although one of the oldest towns on the river, being planted by the Swedes in 1637, it has long been on the decline; the hundred containing in 1810, 2438 inhabitants, and in 1820, 2671. It lies in lat. 39 30 N, and lon. 75 18 W.

Newcastle, post town and township, in Lincoln county, Maine, 45 miles NE of Portland, and 12 of Wiscasset, in nearly the same direction. Population in 1820, 1243.

New Forest, forest in Hampshire, situated in that part of the county which is bounded on the E by Southampton Water, and on the S by the English Channel.

Newfoundland, island on the E coast of North America, between 47 and 52° N lat. It was discovered by Sebastian Cabot in 1496; and after many disputes with the French it was ceded to the English in 1713. Its form is triangular; the N point is separated from Labrador by the strait of Belleisle, and from this apex it is 350 miles in length to the base, which is 300 in breadth. It is a mountainous, woody country, and very cold, being covered with snow five months in the year. It seems to have no inhabitants of its own, but in the summer time is visited by the Esquimaux Indians. It has several bays and harbours, and there are about 500 English families who continue here all the year, beside the garrison of St. John, Placentia and other forts. In the fishing season which begins in May and ends in September, it is resorted to by at least 10,000 people, on account of the great fishing-banks to the SE of the island; for here they cure the cod, which is carried not only to England, but to the Mediterranean and W. Indies. In winter the chief employment of the inhabitants is to cut wood; and the smallest kind, used for fuel, is drawn by their large dogs, trained up and harnessed for that purpose. There is great plenty of game, fish and fowl, but very little corn, fruit or cattle. St. John is the principal settlement.

Newfound mills, post-office, Hanover county, Virginia.

New Garden, township in Chester county, Pennsylvania; where there is a post office, 12 miles W by N of Wilmington, Delaware, and 125 from the city of Washington. It contained in 1810, 1,938 inhabitants, and in 1820, 1199.

New Garden, post village, Robinson county, North Carolina.

New Garden, township of Columbia county, Ohio. Population 1820, uncertain.

New Geneva, post village, Fayette county Pennsylvania, on the right bank of Monongahela river, below the mouth of George's creek, 20 miles by land above Brownsville.

New Georgia, group of islands in the Frozen Ocean, discovered in 1819 by Capt Parry. Lon. W C from 20 to 40 W, lat, from 74 to 76 N. See *Polar Regions*.

New Germantown, post village, Hunterdon county, New Jersey, 35 miles N from Trenton.

New Glasgow, post village, Amherst county, Virginia. It is the seat of an academy for young ladies.

New Gloucester, post town in Cumberland county, Maine; 30 miles N by W of Portland, containing 1648 inhabitants, in 1810; and in 1820, 1653.

New Granada, formerly a captain generalship of Spain, in South America, now an integral part of the Republic of Columbia. It is bounded N by the Caribbean Sea; NE by the former captain generalship of Caracas SE by Brazil, S by Peru, and W by the Pacific Ocean; extending from 12 north to 6 degrees of S lat and from 10 E to 2 W lon. from Washington. The features of nature are on a scale commensurate with the expansive area of this country. It contains the highest mountains yet measured on the western continent, and the alluvial plains near the mouth of the Magdalena.

The Andes of Peru, gradually separating into different ridges traverse New Granada from SSW to NNE. A little to the north of the Equator three very distinct mountain chains extend; one following the Pacific coast reaches, and is continued in the Isthmus of Darien; the second or middle range runs nearly N and S separating the basins of Magdalena and Atrato, merges into the Caribbean Sea. The third or eastern chain ranges NNE towards the head of the gulf of Maricao and separates the confluent of the Magdalena and Orinoco. At about 8 N lat. the latter chain again divides; one branch turns N and merges into the Caribbean Sea, at Cape Vela; the other gradually curves to the E, and constitutes the mountains of Caracas.

The rivers of New Granada, are numerous and important. Those flowing into the Pacific Ocean are generally short, and from the great inclination of their planes of descent rapid in their

course. See *Guaiquil* in the *Addenda*. A communication between the Atlantic and Pacific Ocean has been proposed through the St. Juan of the Pacific, and Atrato flowing into the Caribbean Sea. See *Atrato* in the *Addenda*. Between the great northern ridges of the Andes which we have noticed, rises and flows the Magdalena. This is truly the river of New Granada, having its source at 2°, and entering the Caribbean Sea at 11° N. lat. It is formed by two great branches, the Magdalena Proper, and the Cauca. It is rendered in a great degree unnavigable from the rapid descent of its plane.

East from the Andes, in all the length of New Granada, in Cundinamarca, and Quito, spreads an immense plain across which meanders the innumerable branches of the Amazon and Orinoco. The principal confluent of the former in New Granada, are, the Tunguragua, Napo, Ica, Japura, and Negro. Those of the Orinoco, are the Yuirrita, Ua, Vichada, Meta, and Apure. These rivers, though mere branches of the two mighty rivers, Amazon, and Orinoco, flow by comparative course from 300 to 700 miles, and are generally navigable. The country over which they flow is however, yet a wilderness, or extensive waste inhabited only by savages.

The climate of New Granada, partakes of all the diversity of its surface. The elevated table land of the valleys of the Andes has been celebrated for salubrity, whilst the inhabitants of the low alluvial coasts have been found subject to the ordinary malignant diseases incident to such situations in tropical climates.

New Granada has been justly celebrated for its vegetable and mineral wealth. In a country of such variety of elevation within the tropics the range of vegetable life must embrace nearly all the most valuable fruits and plants useful to man. Gold, silver, platinum, iron, and emeralds are enumerated amongst its mineral productions.

In the animal kingdom, the condor, the largest carnivorous bird yet known, is in a great degree peculiar to this country.

Population according to recent estimates 1,875,700. See *Columbia*.

New Grantham, township of Cheshire county, New Hampshire, 36 miles NW from Concord. Population 1810, 364, and in 1820, 1038.

New Guinea, or *Papua*, large and imperfectly known island, lying to the N from New Holland, from which it is separated by Torres' straits.

New Hagerstown, small town in Tuscarawas county, Ohio.

New Hampshire, one of the states of the United States, bounded by the Atlantic Ocean SE; by Massachusetts S; by Vermont W, Lower Canada N; and Maine E.

	Miles.
It touches, and is washed by the Atlantic Ocean	20
It thence has a boundary of Maine of	150
The boundary between New Hampshire, and Lower Canada remains uncertain, but is about	50
Down Connecticut river, in common with Vermont	170
Along north boundary of Massachusetts	80
Having an entire outline of	470

Length from SW to NE, 160 miles. Breadth 90 miles. Area, 8,030 square miles; or 5,139,200 acres.

Extending from lat. 42 41 to 45 11 N.

This state differs more in the relative elevation of its parts than any section of the United States; and of consequence its climate and seasons have a corresponding excess in their extremes. The Atlantic border, is a sandy beach, followed by hills which increase rather rapidly in elevation. The country rises indeed, by so rapid an acclivity, that the tides do not rise in the rivers more than from 12 to 15 miles inland. The hilly region is quickly followed by the mountainous. Between the Connecticut and Merrimac rivers and near the SW angle of this state Grand Monadnoc rises amongst inferior summits to 3254 feet above the ocean level. Farther north, Sunapee is followed by Moosehillock, the latter attaining an elevation of 4636 feet. Between the sources of Connecticut, Androscoggin, and Merrimac, rise however, the highest mountain summits yet measured in the United States. Some of the peaks of the White mountains rise above 6000 feet above the Atlantic Ocean.

Taken as a whole, the natural features of New Hampshire are bold, prominent, and in many places sublime. If we turn our view to the rugged aspect of its scenery, we would be led to expect much less fertility of soil; but in fact few sections of the United States of equal extent have more productive land than is included in New Hampshire. The most important vegetable productions are grass, wheat, rye, Indian corn, oats, &c.

The manufacturing establishments of New Hampshire, are numerous and increasing. More than 30 cotton and woolen manufactures are in operation in that

state, and many of them on a very enlarged scale.

Staples, iron, lumber, pot, and pearl ashes, fish, beef, live stock, pork, and flax-seed.

For civil and political purposes New Hampshire is subdivided into the six following counties.

New Haven, city, seaport, and seat of justice, New Haven county, Connecticut, situated on the east side of a bay formed by the mouth of the Quinipiack river, and about four miles N from Long Island Sound.

The old town was laid out in a large square subdivided into nine lesser squares, each 858 feet each side, separated by 50 feet streets. In the centre are two large squares; SE of which stands Yale college.

The general aspect of New Haven, is peculiarly pleasing. The site is very nearly a plain; and the streets extending at right angles, with the general neatness of the buildings, and intermix-

ture of trees, affords a picture which every traveller must view with interest.

Of all the public edifices of this city, Yale college decidedly claims the first notice. It was founded in 1701. Its officers are now, a president, nine professors and five tutors. It is under the government of a board of trustees, composed of the governor of the state, the lieutenant governor, and six senior assistants; together with the president and 10 clerical fellows. The college buildings, consist of three large and spacious finished, and one unfinished edifice; a chapel and philosophical chamber: a lycaum containing the library and recitation rooms; a laboratory, of brick, and a stone dining hall. Connected with the college is the medical institution, founded in 1813, with four professors, an excellent anatomical museum, and a medical library. The college library amounts to between 7000, and 8000 volumes. The cabinet of minerals was the munificent deposit of Col. George Gibbs, and does honour to the donor, and to the college. Its original cost amounted to above 17,000 dollars.

The whole number of students in 1820, was 412; and according to Mr. Morse the entire number educated in this institution from its foundation was 3,478, of whom in 1820, there were still living 1,884, more than one half.

An Episcopal seminary was established in 1820, under the government of the general convention of the Episcopal church.

Besides the literary edifices, and the ordinary county buildings, New Haven contains; two banks, a custom house, almshouse, three insurance offices, a grammar school, an academy, six printing offices, issuing four weekly newspapers, a religious monthly magazine, and Mr. Silliman's journal of Science and Arts.

The commercial connexions of this city are numerous and important particularly in the coasting trade. The harbour is good though only admitting vessels of 10 or 12 feet draft. Before the erection of a long wharf of nearly a mile, which stretches so far directly across the bay, the harbour was gradually filling up. The amount of shipping owned in the town is about 12,500 tons.

Amongst the burial grounds of New Haven one deserves particular notice. It is on an entirely novel plan, laid out in parallelograms, which are again subdivided into family burying places. It is a field lying N from the town, and being planted with trees, has a very solemn,

and even awful effect when seen either within or without. The monuments are generally of marble. In 1810 New Haven contained 5,772, and in 1820, 7 147.

Area 6851 square miles, and 4,384,640 acres

The natural geography of New Jersey, presents three very marked subdivisions; 1st, sea sand alluvion; 2dly, the hilly or middle section; and 3dly, the mountainous or northern section.

The sea sand alluvion, embraces near one half the state. A line drawn from the mouth of Shrewsbury river to Bordentown, will nearly separate the hilly from the sea sand region. Between this natural limit and the Sussex mountains, the state is delightfully variegated by hill and dale, and well watered. Some of the north-west parts of Hunterdon, Morris, and Bergen counties, are broken into mountain ridges, but the real mountain section of New Jersey is comprised in Sussex county. It must be understood, that in this state, as in Pennsylvania, the intervening distance between the respective mountains is generally an arable valley.

By reference to the annexed table of the counties, it will be seen, that nearly one half the state is occupied by the sea sand alluvion. This latter region, declines gradually from the hills, and before reaching the Atlantic Ocean, spreads into an almost unbroken plain. The soil is nearly divisible by similar limits with the great subdivisions we have noticed. On the sea sand alluvion, it is generally thin and sandy, and in many places marshy. Above the sea sand alluvion where not mountainous, the soil is generally arable and productive, in grain, fruits, and pasturage.

Compared with its latitude, extending two degrees and 23 minutes; no state of the United States, possesses such wide extremes of climate. The level sandy plains of its southern extension approximate to the climate of South Virginia, whilst the seasons in Sussex county, present a severity approaching those of Vermont and New Hampshire. The structure of the state, renders the causes of these meteorological phenomena obvious.

The staples of New Jersey, are grain, flour, live stock, salted provision, iron; and near New York and Philadelphia, an

Indefinite variety of articles to supply the markets of those cities.

Iron ore is plentifully found and extensively wrought, particularly in Morris county. Iron bars, and hollow ware are produced in great quantities, and of excellent quality.

Leather and boots, shoes, and saddles, may be considered as forming a large share of the manufactured staples of this state. Newark is emphatically a city remarkable for the quantity and excellence of its shoes. The estimated value of exports in 1810, was upwards of 7,000,000 of dollars. No fair view, however, can be given of either the exports or imports of this state, as its two great marts are Philadelphia and New York. The amount of shipping, is about 35,000 tons.

Surveys and levels have been taken with so much accuracy, as to ascertain the practicability of executing a navigable canal over New Jersey, and a company has long since been incorporated for that purpose. The points intended to be united, are Trenton on the Delaware, and New Brunswick on the Rariton. The route was traced by following the Assumpink to near its source, and thence by a short cut into Stoney brook, a branch of Millstone river, and down the latter and Rariton to tide water. The very erroneous principle adopted of following the natural channels, has tended to discredit the operations of the New Jersey canal company.

The distance from Brunswick to Trenton is about 26 miles, and the highest intermediate summit level 50 feet, between the Assumpink and Stoney brook. It is supposed, however, that a summit level but little exceeding 40 feet can be obtained, by cutting between the confluence of Assumpink and Shippettankin creeks, and Rowley's mill, near the confluence of Stoney brook and Millstone river.

An adequate supply of water can be drawn by short feeders from Phillip's springs, Trenton creek, Stoney brook, and Millstone river, all of which are more elevated than the route of the canal, some intermediate sand hills excepted. Sufficient depth of water for a sloop navigation exists at the two intended extremities of the intended canal.

Estimated expenses :

Digging 28 miles, at 20,000 dollars per mile	-	-	\$560,000
Lockage, 100 feet, probably less, at 1,250 dollars per foot	-	-	125,000
Feeders, purchase of land, and water rights	-	-	115,000
			<u>\$800,000*</u>

Upon the importance of the New Jersey canal but one opinion can exist, but as respects the expenses, it may be doubted whether less than one million of dollars could suffice to effect such an object.

If such an inland communication did exist, it is probable, however, that if the intended transmission of coal from the Lehigh and Delaware rivers succeeds, and there is no rational doubt of such success, that such a coal trade alone would, besides the incidental expenses of repairs and superintendence, produce a revenue of more than the interest of \$1,000,000.

For political and other purposes, New Jersey is subdivided into 13 counties. The following table exhibits the relative population with the respective area.

New Lancaster. See *Lancaster*, Fairfield county, Ohio.

New Lebanon, post town, in Camden township, Columbia county, New York, on the road from Pittsfield to Albany, 24 miles from the latter place. This town is remarkable for a tepid spring which has become a watering place of much resort. The water except its temperature 75° of Fahrenheit, differs in no other respect from pure mountain water ; it is tasteless and inodorous, and used for all common purposes of cooking and washing.

The Shakers own 3000 acres of land in

this township, and have a very flourishing settlement near Lebanon village. The scenery around Lebanon is peculiarly pleasing, and even sublime.

New Lebanon, post village of Camden county, North Carolina.

New Lexington, town in Richland county, Ohio ; on the west bank of Mohican creek, 10 miles from Bellville.

New Lexington, inconsiderable town of Knox county, Ohio, thirteen miles E from Mount Vernon.

New Lexington, village of Jefferson county, Indiana, 17 miles W from Madison. Salt wells have been dug here to the great depth of 700 feet. It contains about 40 houses, 200 inhabitants, and one newspaper printing office.

Newlin, township of Chester county, Pennsylvania, on the west branch of Brandywine creek six miles SSW from Downingtown. Population in 1820, 914.

New Lisbon, township of Otsego county, New York ; 10 miles SW from Cooper's town. Population in 1820, 2221.

New Lisbon, flourishing post town and seat of Justice, Columbiana county, Ohio ; 35 miles S from Warren in Trumbull county ; 56 NE from Pittsburg, and 160 NE from Columbus. It now contains an elegant suit of county buildings, a bank, two brick meeting houses, nine or ten mercantile stores. In 1820 the number of inhabitants were 746. In the vicinity are a furnace, four merchant, and four saw mills, a paper mill, an extensive woollen factory, a fulling mill, carding machine, and glass factory.

New London, post town, Hillsborough county New Hampshire, 30 miles NW from Concord. Population in 1810, 692 ; and in 1820, 924.

New London, SE county of Connecticut, bounded by Rhode Island E ; by Long Island sound S ; by Middlesex county in Connecticut W ; Hartford and Tolland NW ; and Windham N. Length 30 ; mean width 20 ; and area 600 square miles. Connecticut river forms part of its west boundary ; but beside this stream New London county is in a remarkable manner indented with bays and rivers. Quinebaug and Shetucket unite in this county and form the Thames, which at Chelsea landing below Norwich receives the Yantic, and forms a very fine and spacious entrance for vessels. Between the Connecticut and Thames beside many of minor importance the Niantic bay opens to Waterford. Between the Thames and Pacatuck, the coast is indented by Pequonock, Mistick, Quianoboc, Stonington, and Wickatequack. Pacatuck bounds the county and state to the E. The western, or rather the northwestern part of New London is

mountainous, and except some marshes near the sea-coast, the general surface is hilly, but presents a very pleasing aspect. The soil is productive in fruits, grain, and pasturage. Staples, grain, flour, live stock, lumber, fish, &c. Chief town New London.

New London, city, seaport, and alternately with Norwich, seat of justice for New London county Connecticut ; is situated on the west side of the Thames, three miles above its mouth, 14 miles below Norwich, and 42 SE from Hartford, lon. W C 4 0 48 E, lat. 41 0 25 N. Beside the ordinary county buildings it contains two banks, a marine insurance office, two newspaper printing offices, and five or six places of public worship. The shipping in 1818, amounted to near 16000 tons. Having a depth of five fathoms water, the harbour is the best between New York, and Newport ; and is very seldom obstructed by ice. It is defended by forts Trumbull and Griswold, the former on the New London, and latter at Groton on the opposite side of the river. The narrowness of the entrance renders its blockade easy, which was effected during last war. On a point on the west side of the harbour is a light house.

New Mexico, province of New Spain, or Mexico in the Internal provinces. This is the most northern of the Spanish settlements in the interior of North America; its length, from south to north, about 500 miles breadth about 200 miles. Area 44,000 square miles. Population 40,000. Bounded S by New Biscay or Durango, E by Texas, and on all other sides by regions little known, inhabited by native Indians. New Mexico, is an ancient Spanish conquest, as early as 1559, under the Viceroy Velasco el Primero, Durango was a military post. Towards the end of the 16th century, the then Viceroy, count de Monterey, sent Juan de Onate, to New Mexico; this general drove away the Indians and peopled the banks of Rio del Norte. Consequently the establishment of that nation, in New Mexico have existed more than two hundred years.

The two provinces of New Biscay, and New Mexico, are separated by a desert. This desert crosses the Rio Grande between the Pass del Norte and Albuquerque. The desert of the Muerto, is upwards of 100 miles wide and destitute of water. "The whole of this country," says Humboldt, "is in general of an alarming state of aridity, for the mountains Delos Mansos, situated to the east of the road from Durango, to Santa Fe, do not give rise to a single brook. Notwithstanding the mildness of the climate, and the pro-

gress of industry, a great part of this country as well as Old California, and several districts of New Biscay, and the Intendency, of Guadalupe, will never admit of any considerable population." This desert lies in a NE and NW direction, and extends from the Pacific Ocean to within 200 miles SW of St Louis in Missouri. It is covered in Autumn with muriate of soda, common salt, and is every where extremely cold for the climate; see the article *Rio Grande*.

The inhabitants of New Mexico, are exposed to the hostile Indians, and live chiefly in towns. They are like those of New Biscay, a bold and daring race of men, continually on horseback. The arid sterility of their soil, and the almost illimitable extent of their savannas, compel them to a pastoral life.

New Mexico, is however with all its defects a delightful residence. The purity of the air and the rich scenery of the fertile banks of the rivers, have a fine effect. European grain and fruits grow luxuriantly where the soil is fertile. The dryness of the seasons is favourable to the grape, which is peculiarly delicious in that country. Perhaps in the advance of civilization the borders of the North American desert may from its exemption from rain, become remarkable for its rich wines.

Newman, corporate town in Gloucestershire, with a market on Friday. It is seated on the Severn, eight miles SW of Gloucester, and 112 WNW of London. Lon. 2° 23' W, lat. 51° 46' N.

New Orleans, capital, and chief town of the state of Louisiana, stands upon the left bank of the Mississippi river, at N lat. 30° and W lon. W C 12 5.

It is composed of the city properly so called, and several Faubourgs, (suburbs,) the principal of which are, St. Mary's, Annunciation, and La Course, above the city; Marigny's and Boniers, below; and Tremé, and St. John's in the rear of the city, towards Bayou St. John's.

The city itself is laid out with the streets intersecting each other at right angles.

The Fauxbourgs, though in general also regular, deviate in some places. Like all other places along the banks of the Mississippi, the ground upon which New Orleans stands falls, by a gentle declivity, from the margin of the river, until depressed into a swamp, or overgrown flat, on the rear of the town. The city, and its Fauxbourgs, except those of the Tremé and St. John's, stand upon the solid border of land between the river and swamp, the medium width of which, is about 400 yards. The extreme length of New Orleans along the Mississippi is nearly three miles. The rivers running opposite in the form of an S. It contains a State-house, Prison, Market-house, Hospital, Principal, or Town-house. A Cathedral, or the Church of St. John's, Ursuline Convent, an Episcopalian, and a Calvinistic church, two Theatres, a Court-house, three Insurance offices, four Banks authorized by the state, a branch of that of the United States, a Custom house, Navy Yard, Arsenal, Barracks, and one Fort, that of St. Charles, situated between the city proper and Fauxbourg Marigny.

New Orleans is situated 105 miles above the mouth of the Mississippi, 322 by water, and 156 by land, below Natchez; 1169 below St. Louis; 991 below the mouth of Ohio, and 1933 below the city of Pittsburg.

It is ruled by a mayor and city council, elected by the freeholders.

This city is admirably situated for a commercial depot, having equal facility of intercourse, foreign and domestic. Its markets are excellent, particularly for garden vegetables, and for fruits, both tropical, and from the numerous settlements on the various confluent of the Mississippi. The houses, and population are both rapidly on the increase, as may be seen by the following comparative view of its census in 1810 and 1820. At the former period, the city and parish contained 24,552, of whom, above 17,000 were found in the city. In 1820, the number of inhabitants stood thus:

New Orleans was laid out in the spring of 1717, and named in honour of the Duke

of Orleans, then Regent of France, during the minority of Louis the XIV. It remained in the hands of the French until 1769, when together with all Louisiana it was taken possession of by the Spanish general, O'Reilly. It was again given up by Spain to France in 1803, and on the 20th of December of that year delivered to the United States, by the French colonel Prefect, Laussatt.

In the month of November, 1814 a British fleet and army appeared off Cat Island, and on the 16th of November, the United States flotilla of gun boats were captured in the Pass, between the Malheureux islands and Florida shore. On the morning of the 23rd December, part of the British army reached the bank of the Mississippi, at General Villaret's plantation, eight miles below New Orleans. On the evening of the same day, General Jackson attacked them in their encampment, when a sharp but indecisive engagement took place; both armies claiming the victory. On the ensuing morning, the United States army took position on Rodriguez's canal, three miles below the city, and that of the British formed its lines one mile still lower down. Partial engagements intervened, on the 28th day of December, and on the 1st of January 1815. On Sunday morning, January 8th General Packeham quit his lines and attacked the United States army in its entrenchments. The former were defeated with great slaughter, but with very trifling loss on the part of the latter. The British lost about 2000 men, the United States had only five killed, and seven wounded.

On the night of the 18th the British army commenced its retreat, and a few days afterwards evacuated all Louisiana.

Newport, post town, and alternately with Providence, capital of Rhode Island, five miles from the Atlantic Ocean, and on a small but very commodious bay formed by a projection of Rhode Island proper, and Connecticut Island. Lon. W from Greenwich, 71 17; and E from Washington, 5 43, lat. 41 29 N.

The harbour is one of the best on all the Atlantic coast of the United States, opens before the town into a noble circular basin, easy of access, land-locked on all sides, and commanded by the adjacent heights. Goat Island, a small spot of ground at its outer entrance, contains Fort Wolcott and a United States' navy hospital. The harbour is also defended by two other forts—Fort Green, and Fort Adams.

Though much declined from its former comparative importance, Newport is still a flourishing town. The site rises by an elegant acclivity from the harbour, and again declines gradually in the rear, giving the aspect of a delightful swell to the whole place.

Newport contains a state-house, market-house, theatre, public library, alms-house, five banks, two insurance companies, eleven places of public worship, four Baptists, two Congregationalists, one Episcopalian, one Friends, one Moravian, one Methodist, and one Jewish Synagogue.

In 1819, the amount of shipping owned in this town, was near 11,090 tons.

The population of the town, and that part of its vicinity included in the township, as it stood in 1810, and in 1820, are exhibited in the annexed table.

New river, for supplying London with water. This river has its rise at Amwell, near Ware, in Herts, and was formed by the great Sir Hugh Middleton, who was obliged, in order to avoid the eminences and valleys in the way, to make it run a course of about 39 miles, and to carry it over two valleys, in long wooden troughs lined with lead; that at Bushill, being 660 feet in length, and 30 in height; under which is an arch, capacious enough to admit the largest wagon loaded with hay or straw. In short, over and under this river, which sometimes rises thus high, and at others is conveyed under ground, runs several considerable currents of land waters, and both above and below it a great number of brooks, rills, and water-courses have their passage.

New South Wales, name given to the E coast of New Holland. It was first explored by captain Cook, in 1770; and a design was formed in consequence of his recommendation, to settle a colony of convicts at Botany Bay. Captain Philip being appointed governor of the intended settlement, sailed from Portsmouth, in May 1787, with a detachment of marines, and 778 convicts, of which 220 were women. He arrived at Botany Bay in January, 1788; but finding this bay very ineligible for a colony, he fixed upon Port Jackson, about 13 miles further to the N; and here a settlement was begun, to which he gave the name of Sidney Cove. With respect to the country, a vast chain of lofty mountains, about 60 miles inland, runs nearly in a N and S direction further than the eye can reach. The general face of the country is diversified with gentle risings and small winding valleys, covered, for the most part, with large spreading trees, which afford a succession of leaves

in all seasons; and a variety of flowering shrubs, almost all new to a European, but of little fragrance, abound in those places which are free from trees. The climate appears not to be disagreeable; the heat is never excessive in summer, nor the cold intolerable in winter; storms of thunder and lightning are frequent. The quadrupeds are principally of the opossum kind, of which the most remarkable is the kangaroo. The native dogs are extremely fierce, and cannot be brought to the same degree of familiarity as those we are acquainted with. There are also weasels and ant-eaters; with that singular animal the duck-billed platypus, in which the jaws of a quadruped are elongated into the complete bill of a bird. There are many beautiful birds of various kinds; among which the principal is a black swan, its wings edged with white, its bill tinged with red; and the ostrich or cassowary, which frequently reaches the height of seven feet or more. Several kinds of serpents, large spiders, and scolopendras, have also been met with; and three or four species of ants, particularly green ants, which build their nests upon trees in a very singular manner. There are likewise many curious fishes; though the finny tribe seem not to be so plentiful here as they generally are in higher latitudes. Some sharks have been seen in Port Jackson, and in the rivers and salt creeks there are alligators. The natives of New South Wales are represented as perhaps, the most miserable and savage race of men existing. They go entirely naked; and, though pleased at first, with some ornaments that were given them, they soon threw them away as useless. It does not appear, however, that they are insensible of the benefits of clothing, or of some of the conveniences of which their new neighbours are possessed. Some of them, whom the colonists partly clothed, seemed to be pleased with the comfortable warmth they derived from it; and they all expressed a desire for iron tools. The colour of the natives is rather a deep chocolate than a full black; but the filth with which their skin is covered, prevents its true colour from appearing. Notwithstanding their disregard for European finery, they are fond of *adorning* their bodies with scars, so that some of them make a very hideous figure. Sometimes the skin is raised several inches from the flesh, and appears as if filled with wind; and all these seem to be reckoned marks of honour. Some of them perforate the cartilage of the nose, and thrust a bone through it, as a kind

of ornament. Their hair is generally clotted with a red gum; and they paint themselves with various colours; they will also sometimes ornament themselves with beads and shells, but make no use of the beautiful feathers of their birds. Most of the men want one of the fore-teeth in the upper jaw, which appears to be a badge of honour among them; and it is common for the women to cut off two joints of the little finger. The New Hollanders appear extremely deficient in the useful arts. Of the cultivation of the ground they have no notion; nor can they be prevailed upon to eat our bread or dressed meat. Hence they depend entirely for subsistence on the fruits and roots they can gather, and the animals and fish they catch.

The British colony in 1818, amounted to about 25,000 inhabitants.

This great state extends over 46,000 square miles, or 29,440,000 acres.

Length from Staten Island, south point, to N lat. 45° 34'. Breadth from south west angle of Massachusetts, to the western boundary 340 miles Lat. 40 30 to 45° N.

This state extending over four and a half degrees of latitude, and intersected by several mountain ridges, presents a great diversity of soil and climate. Though the western parts are less broken than those of the east and north, yet, the whole state with very partial exceptions, is either hilly or mountainous.

The Hudson river flows from a mountainous region, and is precipitated into a deep valley, at or near its junction with the Mohawk. The Hudson valley is one of the most remarkable phenomena in the hydrography of the United States. From the junction of the Hudson, and Mohawk to Sandy Hook, is a long narrow bay rather than a river of 150 miles in length. In this distance, two chains of mountains are passed. The banks are for the most part abrupt, rising to two or three hundred feet; in many places precipitous, as the Basaltic rocks along the right bank above the city of New York, and in many other places above and below the High lands.

The pass known by the term High lands, is indeed a very remarkable feature in the geography of the state. Enormous walls of perpendicular rock rises on both banks, to the appalling elevation of more than 1000 feet. Broken into great variety of form, rude, and deep valleys, intervening between the gigantic prominences, and the whole covered by a thick forest, affords one of the most impressive landscapes, to be found in North America. Here the great primitive ranges passes the Hudson, and here the Ocean tides find the only passage over this boundary into the interior, which exists in the United States.

The High lands, are in fact the elongation of the same range which passes through Pennsylvania, by a very humble ridge dividing Lancaster and Chester counties, in part; the north-west part of Chester from Berks; the north-west part of Montgomery from Berks; and Bucks from Lehigh; and crossing Delaware below Easton, passes through New Jersey, dividing Sussex county from the other parts of the state, enters New York, forming the north-western parts of Rockland,

and the south-eastern parts of Orange counties, crossing the Hudson above West point, at the noted place we have reviewed. This chain continues into Connecticut, Massachusetts, and Vermont, forming in Connecticut the rugged hills of Litchfield, in Massachusetts, the alpine, but fertile county of Berkshire; and in Vermont the elevated chain which gives name to that state.

What is known in Virginia, Maryland, and Pennsylvania by the name of Blue Ridge, or South Mountain, which crosses the Potomac below the mouth of the Shenandoah, the Susquehannah below Harrisburg, and the Delaware below the extreme south point of Wayne county, at what is called the Water Gap, and following the course of the Delaware river, forms the north-western border of New Jersey, enters New York, at the mouth of the Nevisink river, or at the north-west angle of New Jersey. The Shawangunk is the termination of this range, west of the Hudson.

The Kittatinny range, is one of the most remarkable of all those which constitute the Allegany or Appalachian system. The Kittatinny, though of so much importance, has not been hitherto correctly drawn upon any of our maps. It is the same range, which by several local names crosses Virginia and Maryland, from the sources of Tennessee and Great Kenhawa, crosses the Potomac below Hancock's town, enters Pennsylvania, crosses the Susquehannah five miles above Harrisburg, runs north-east, and finally enters New York, in the north-west part of Sullivan county. The Catsbergs is a part and the most elevated and prominent of the Kittatinny range.

An observation upon the very singular bend in the course of our mountains, ought to be made in this place, as this change of direction takes place in New York.

If we glance upon the map before us, we find the range which forms the High lands, after passing the Hudson, change its north east to a north course, in Dutchess county, and winding through Massachusetts and Vermont, enters Lower Canada.

The Shawangunk, is most probably continued in the ridges found in the central parts of Dutchess and Columbia counties.

The Kittatinny forming the north-west limits of Sullivan and Ulster counties, in New York, preserves the north-east direction into Greene county, where the range turns rather abruptly to the north and north-west, attains its greatest elevation in the town of Wyndham. Thence it ranges along the south-west part of Schoharrie, the south-east of Otsego, along the southern parts of Herkimer and Montgomery, crosses the Mohawk by the Little Falls, ranges through Herkimer, where it is

known by the local name of the Sacandago mountain. It thence ranges between the Oswegatche and Black rivers, crosses the St. Lawrence by the Thousand Islands.

It has been from ignorance of, or inattention to this fact, of their true organization, which has introduced so much confusion in the delineation of our mountains. All the minor chains, east of the Hudson, pursue a course very nearly north and south. It has been from erroneously projecting the mountains of New Hampshire, in a north east direction, which has placed mountains between Maine and Lower Canada, where none exist. I am inclined to consider the mountains of New Hampshire, extended in a direction very nearly north from where they leave that state, to be identified with the precipices of Quebec, Montmorency, and the Chaudiere.

I have introduced these remarks in this place, in order to explain the strong features of New York, and the connexion between its natural Geography and that of the adjacent places. We now proceed with the local physiognomy of that state.

We have examined the principal mountains which chequer the face of New York, and we have shown that the greater part of its surface is uneven. The only level tracts are, the eastern margin of Long Island, a narrow strip along the south side of Lake Ontario, and a few confined alluvial bottoms along some of the smaller rivers and creeks. The most marshy part of New York, lies in the angle between Lake Champlain and the St. Lawrence river.

It must be obvious that the climate phenomena of New York, must be very strongly marked.

See *Long Island*, and for detailed description, the respective counties.

In a general view of New York, after its natural Geography is surveyed, the next most prominent object it presents, is its two great canals. The following descriptions of that uniting Hudson river with lake Erie, was transmitted to the editor of this Gazetteer by Governor Clinton, and Benjamin Wright, Esq. Though they involve some little repetition, I am induced to give them insertion from the authenticity of their contents, and from the primary importance of the object.

No. I.—Gives a view in the narrative form of the canal, as it stood in June, 1822.

No. II.—Presents a topographical description of the canal, as if completed; and

No. III.—Contains a more detailed description, combined with a comprehensive perspective of the route, and the improve-

ments, superintended by the completion of the canal.

No. I.—The whole distance from New York to Buffalo, by the route of the Canal, is at least 500 miles. After leaving the steam boat at Albany, I took the stage for Little Falls, where I arrived in season to take a canal packet for Utica. I employed half an hour's leisure in looking at the locks and comparing the new with the old Canal at the Little Falls. What a discrepancy! Weston, who was so much extolled as an English engineer, sinks into insignificance when compared with the native engineers now in the full tide of successful experiment. From what I can see, and have heard of his operations, I imagine that he was quite a subordinate engineer—of little experience—less celebrity—and that his object was more to acquire money than fame. With this view he adopted a system of procrastination, enveloped his proceedings with the cloak of mystery, and infected all that were within the reach of his influence with chimerical and unfounded notions of the difficulties, which surround the walks of the civil engineer. From below the Little Falls to within seven miles of Utica, there are 12 locks of the most solid materials, and of the most admirable workmanship. I embarked on board of an elegant packet boat, called the Magnet, of six tons, and in six hours arrived at Utica—the distance by land is upwards, and by the canal less, than 22 miles—and by the river 28. Our way was through a charming, well settled, fertile country, and a considerable distance through the German Flatts, which contain several thousand acres of excellent land, composed of the alluvia of the West Canada Creek and the Mohawk river. Nearly opposite to the beautiful village of Herkimer, the Erie Canal follows for a short distance the track of the old canal, and in one place an old and a new lock approach closely to each other. This affords an excellent opportunity for contrast, and the result is so greatly in favour of the latter, that it is perfectly idle to attempt a comparison. The property lying at this place, ready for conveyance to market, is composed of thousands of barrels of flour, pork, potash, and whiskey—and staves, lumber, glass, wheat, &c. to the value of a quarter of a million of dollars, and a great deal of it unhooused.

The next morning we took boat at Utica for Montezuma, and at 10 o'clock A. M. the next day we reached the place of destination 95 miles. We immediately embarked on board of a small

boat—entered the Seneca River by a lock—passed into one of its inlets, called the Clyde River, formed from the confluence of the Canandaigua outlet and Mud Creek at Lyons, and navigated it until we arrived at Clyde—distant 15 miles by this route from Montezuma, and 12 miles by the canal when completed. The Cayuga marshes lie between these places, and present a formidable obstacle to the progress of the canal—last season 2000 men were employed in forcing this work through them, one half of whom took sick, and many died, but in a few weeks this difficult undertaking will be accomplished. At Clyde we entered the Canal by a temporary wooden lock, and took passage in the canal boat. At Lyons, nine miles, we changed to the Myron Holley, a boat of 40 tons, drawing eight inches water, and replete with elegant accommodations. We lodged that night at Palmyra, and the next morning we arrived at Heartwell's Basin in Pittsford, (eight miles from Rochester,) where the present navigation of the canal terminates. I have thus travelled 174 miles by boat—

159 on the canal,
15 on the river Clyde,

In the course of the season the canal will be navigable from Rochester to Schenectady—that is to say, 59 miles east of Utica, and 20 miles between the Genesee and Seneca rivers, making an uninterrupted navigation of 238 miles. There will then remain to be finished about 122 miles, to wit, 28 from Schenectady to Hudson River, and 94 from Genesee River to Buffalo; and of this a great portion is already done. In the vicinity of Albany, great excavations are carrying on at the Cohoes; the foundation of the locks are laying at two different points; the aqueducts across the Mohawk are in a state of preparation, and excavations are proceeding in the heart of Schenectady. From Rochester to Lock Port, 63 miles, there are no intervening locks, and here as well as between Montezuma and the first lock east of Utica, there is an uninterrupted level of near 70 miles, making only in two distances near 140 miles without the incumbrances of locks; a fact without a parallel in the annals of the world.—There would be no difficulty in finishing the canal to Lock Port this season, but at this place it passes a mural precipice of 60 feet, and 260 feet above the level of Lake Ontario, which is about 15 miles to the north. Lock Port is a prosperous village of nearly 100 buildings, which

has sprung up with mushroom rapidity, but whose flourishing existence will be as enduring as that of the canal. Here are a double set of locks, five for ascending and five for descending boats, of 12 feet lift each, and from the heights of the village you look down to the foot of the canal, on a great natural basin capable of containing a vast number of boats, and affording the most secure as well as the most spacious accommodations. When the forests which obstruct the view of Lake Ontario and Lake Erie are cut down, you will have from this altitude the most picturesque and sublime prospects which the world can afford. To the north you will see the canal winding its way to the waters of the east, lost in the distance, and crowded with boats bearing the wealth of the western world; 100 feet below this height, and on an average two miles north of the canal, you see the celebrated Ridge Road, covered with habitations, and its borders lined with fruit trees, green with vegetation and teeming with abundance. Farther still you behold the Lake Ontario, a great inland sea, stretching itself to the north and the east; and to the west you will behold the immense basin of Lake Erie, and hear the roaring of the cataract: and to whatever point of the compass you direct your view, you will perceive the most fertile regions in the world. The embankment at Irondequat is a mile long, greatly elevated, and a part of the way is composed of a narrow neck, which appears as if it were arranged by nature for the express purpose of maintaining the level of the canal. From it you will enjoy a prospect when passing in the boats on the canal only to be exceeded by that of Lock Port. From Lock Port to Buffalo, via the canal, is about 30 miles; for one-third of this distance Tonawanta Creek, will occupy the place of the canal; and to Genesee River, a distance of 94 miles, its principal supply will be derived from Lake Erie, which will be let in at Buffalo, and after a passage of about 12 miles, will enter Tonawanta Creek, near its mouth, the waters of which will be forced back by a dam. To maintain a sufficient descent for this feeder, several miles of very deep cutting will be required from Lock Port, which will consume much money and much time, as a considerable part of it will be through calcareous rocks.

The completion of the canal east from Lock Port as far as the Genesee River, will be useless until this great aperture for the waters of the lake to feed the lower level is made. The canal will

have, with a view to the attainment of this important object, a descent of an inch a mile from Buffalo to Genesee river, which it is calculated will produce a current of half a mile an hour—the distance being 94 miles, it will take on his hypothesis, seven days before the waters of Lake Erie can mingle with the Genesee river. You will readily perceive that much will be lost on this long voyage by evaporation, leakage, and wastage in general. There are no intermediate streams upon which great reliance can be placed; but, thank heaven, there are no intervening locks to produce consumption of water and to create constant demands for supply. Many small streams which gush from the foot of the Mountain Ridge can be put in requisition. The Genesee river can be used for a western as well as an eastern feeder. Sandy Creek and Eighteen Mile Creek can be pressed into the service of the canal—the best artificial reservoirs and basins can be made and filled in seasons of abundance so as to meet seasons of scarcity. And what is of more importance, Tonawanta Creek, above the place where the canal enters it, can be forced into the channel of Oak Orchard Creek, which will serve the double purpose of facilitating the transit of the waters of Lake Erie, and of affording a copious supply at a point where it will be wanted. It is impossible to form an estimate of the quantity or of the value of the commodities ascending and descending the canal—perhaps two or three millions of dollars before the termination of the season; and 400 boats will be certainly employed, if not already, before that time. Some boats or scows convey 400 barrels at a time, and the revenue on the first of June amounted to \$20,000. One man owns 40 boats, another 16; and I saw on my voyage 16 barges which had come from Ogdensburg, via Oswego and Montezuma, for the purpose of carrying freight on the canal.

The progress of a loaded boat carrying from 20 to 40 tons, with two horses, will be at the rate of 30 miles a day—while that of a wagon, with from four to six horses, and from two to four tons, will not average more than 20 miles a day. The tolls paid at the locks will not exceed the tolls required at turnpike gates; and the ordinary expense of a boat with its equipments and horses will not exceed that of a land conveyance. And the difference of expense in the carriage of commodities will be obvious from the following statement. The transportation of a hundred weight of commodities from Utica to Montezuma,

can be had for five cents, by the canal—while the transportation of the same quantity by land from Utica to Albany, the same distance, at least 96 miles, will cost 75 cents. A ton of goods can now be transported from New York to Geneva, or to the head of the Seneca Lake, for 20 dollars. Before the establishment of the canal, it cost 50 dollars. The wear and tear, or, in other words, the insurance against damage by land conveyance from Albany to Buffalo is 5 per cent.—by the canal almost literally nothing. By a proper arrangement at the locks, by which one vessel will ascend a lock and the other descend immediately after, before the lock is emptied, it will not take more than six minutes for a passage of a vessel through a lock; of course 240 can pass through in 24 hours. As the canal will be navigable for eight months and a half in a year, supposing 50 or 40 tons conveyed in each boat, the aggregate of production in the course of a season may approximate two millions of tons, which will produce a revenue equal to ten millions of dollars—a sum exceeding credibility and almost transcending reasonable calculations.

The animating influence and vivifying spirit of this great work is felt in all directions. One hundred houses are now building at Rochester. New villages are springing up on the turnpike, on the canal, and at intermediate points. Buffalo, like a phoenix has risen from its ashes with renovated beauty and increased prosperity. When I cast my eyes over this delightful village, and saw its pharos, its spires, its public buildings, its piers stretching out into the lake, and braving the fury of the billows, a crowd of sea vessels on the watery expanse, and an inland sea extending beyond the reach of view, and bearing on its bosom the accumulated and accumulating riches of the western world. I must confess that I felt an enthusiasm which I rarely indulge. The energies of freedom and intelligence enlisted on the side of great public improvements, furnish a spectacle on which, to borrow the expression of a heathen philosopher, "The gods may look down with admiration."

P. S. Since writing the above, the following interesting facts have been published in a paper at Utica

"Very little transportation was done upon the canal this season before the 20th of April, owing to the deep penetration of the frost last winter, which rendered it unsafe to let in the water before the banks had perfectly settled. On the section east of this, which is navi-

gale 22 miles, there have been repeated interruption to the navigation for a week or ten days at a time, since April, and one of four or five days on what is called the *middle section*, west of this village. These interruptions have been caused by the embankments giving away where they were high, or at places where the canal passed through the beds of quicksand. Difficulties of this kind must be expected to occur until the earth has fully settled.

"Toll has been collected on 160 miles of canal, viz: from Little Falls to Montezuma, 118 miles; at which place there is an interruption of six miles, the boats pass up Clyde river, and re-enter the canal at Blockhouse; from which place, to Hartwell's basin, there is 42 miles uninterrupted navigation. Allowing the toll on the Northern Canal to have increased since last year the same ratio it has on this, and the amount of toll on both canals, up to the first day of July, will not vary from \$25,000. During which time, there has been at this place, 712 arrivals, 24 of which were rafts, with the following articles, viz;—71,037 barrels of flour,—519 bbls. provisions—5,000 bbls. salt—3,508 bbls. ashes—190 bbls. oil—232 bbls. beer—34,050 bushels wheat—38,610 do. water lime—404 do. rye—2,458 do. corn—2,663 do. oats—29 do. grass seed—10 tons bar soap—10 tons meal—275 tons gypsum—14 tons mill-stones and clay—905,827 feet boards—37,206 cubic feet timber—604,000 shingles—19,250 staves and heading—32,700 brick—3,777 boxes glass—61,090 lb. hams.—114,671 lb. lard—6,706 lb. wool—24,960 lb. butter—98,782 galls. whiskey. Cleared during same time, 2,018 tons merchandize—43 tons household goods, &c.

"There has been 307 boats registered at the collector's office, the aggregate tonnage being 7,675 tons.

No. II.—This canal extends from lake Erie at the mouth of Buffalo creek, to the Hudson at Albany, a distance of 360 miles. It is 40 feet wide on the surface of the water, 28 feet at bottom, and four feet deep; commencing at Buffalo creek near its mouth, it passes along near the shore of the lake and Niagara river to Black Rock, a distance of two miles, where it comes close to the shore of the river, and passing along that shore for 10 miles; it then intersects the Tonawanda creek a short distance above its confluence with the Niagara river. In this distance it has a descent of six inches, or half an inch to the mile. To raise the creek to the level of the canal, a dam four feet six inches high is thrown across the creek a little distance below the point of junction with the canal. The chan-

nel of the creek is then used as the canal, and a towing path constructed along its bank for 12 miles, (the creek in its natural state having but one foot fall in that distance.) From this point a cut across what is called the Mountain Ridge, north easterly of seven miles and a half is made; and one part 30 feet deep, and including three miles of Rock:—In this deep cut a descent of one inch to the mile is given to the canal to the brow of the mountain (so called) joining the great basin of Lake Ontario, and which is the range of highlands, called the Lewistown or Queenston Heights, on the Niagara river. Here it descends 60 feet by means of five combined and double locks of 12 feet each; after descending it passes on easterly, with a descent of half an inch to the mile for 63 miles to the Genesee river, over which it passes by a stone aqueduct of 600 feet in length, consisting of nine arches of 50 feet span each, and two of 40 feet each to convey water to mills; the arches being a segment of a circle of 11 feet rise; after passing the Genesee and continuing easterly about two miles, descent by a lock of seven feet forty one-hundredths; then a level of 70 chains, and another lock of same descent—then a pound of 15 chains and another lock of the same descent—then a pound of 18 chains and another lock of the same descent—then a pound of 37 chains and another lock of the same descent—a level or pound then commences, which extends eight and a half miles, to one mile E of Pittsford—then a lock of eight feet descent; thence over the high embankments about the Irondequoit, and the same level continued for 14 miles to the west part of the town of Palmyra—then a lock of 10 feet descent—thence level half a mile, then a lock descent 10 feet—then easterly over Mud creek, and passing the town or village of Palmyra a level of 12 miles—then a descent of 24 feet by three locks separated so as to form pounds of 200 yards between each, thence a level of six miles to Mud creek, over which it passes by a stone aqueduct of three arches of 30 feet each, and then descends by a lock of 10 feet—then level one mile and a half to the village of Lyons, passing the same, and having a descent by a lock of six feet; thence level four miles and a half and a lock of seven feet descent—thence level four miles to the village of Clyde, a lock of five feet descent—thence level five miles to the western edge of the Great Cayuga Marshes, and then a lock of nine feet descent to the level of the surface of Seneca river—this level continues six and a half miles, passing through the Seneca river on its natural level to the E side thereof—here a lock of seven feet rise to the village of Montezuma—thence level one mile and a half to a lock of nine feet rise

—thence level four miles, and crossing the Owasco outlet by an aqueduct of four arches of 20 feet each, to a lock of nine feet rise—thence level $11\frac{1}{2}$ miles to a lock of 11 feet rise (at Jordan) which is connected with an aqueduct of three arches of 20 feet each—the Jordan summit extends 12 miles and the canal then descends by a lock of 11 feet and which is connected with an aqueduct of two arches of 30 feet each—thence a level seven miles and a lock of six feet descent which brings you to the Salina Level [here a branch of one mile and a half connects the canal with the salt works on the Onandaga lake] which crosses the Onandaga creek by an aqueduct of four arches of 30 feet each—thence level one mile and a half to a lock of six feet rise—thence level one mile to two locks of 10 feet rise each with a small pound between—thence level 69 miles, passing through the town of Manlius in Onandaga county—the towns of Sullivan and Lennox in Madison county, the towns of Verona, Rome, Whites-town and Utica in Oneida county, and through the greater part of the town of Frankfort in Herkimer county to a lock of eight feet descent nine miles E of Utica—then a level one mile to a lock of eight feet descent—thence level half a mile to a lock of eight feet descent—thence level two and a half miles to a lock of eight feet descent—thence level a quarter of a mile to a lock of eight feet descent—thence level one mile and a half to a lock at German Flats, nine feet descent into the old canal (constructed by the Western Inland Lock Navigation Company in 1793,) and following the old canal half a mile, and then leaving it and continuing the same level for three miles to a lock of eight feet descent—thence level three miles and a half to the head of the Little falls (town of German Flats) thence descending the declivity at Little Falls by five locks of eight feet descent each, and placed so as to form pounds between, of sufficient length for boats to pass each other—thence level five miles to a lock of eight feet descent—thence level four miles to a lock of eight feet descent—thence level three miles and a quarter to a lock of eight feet descent—thence level four miles and three quarters to a lock of seven feet descent, near Esquago creek, town of Canajoharie—thence three miles and a quarter (to Canajoharie village) a lock of six feet descent—thence level 12 miles to a lock of seven feet descent—thence level to the west bank of Schoharie creek four miles and a half, then a lock of six feet descent—thence across the creek in a pond formed by a dam (a grand lock on E Bank) thence level three quarters of a mile to a lock of four feet descent—thence level three miles to a lock of eight feet descent—thence level four miles and

a quarter to two locks of eight feet descent—thence level four miles to a lock of eight feet descent—thence level three miles to a lock of eight feet descent—thence a farther distance of three miles to a lock of eight feet descent—thence level half a mile to a lock of eight feet descent—thence level three miles to Schenectady, and continuing the same level four miles below the last mentioned place to an aqueduct 850 feet long and 21 feet above low water of the river, and immediately after crossing the river it descends 12 feet by three locks of seven feet each, with short pounds between—thence level two miles to a lock of seven feet descent—thence a level of one mile and a half to a lock of seven feet descent—thence level three miles and a half to a lock of seven feet descent—thence level eight miles, and passing the Mohawk by an aqueduct 1150 feet long and 16 feet above the river to four locks descent 32 feet with short pounds between—thence level one mile and a quarter (say a quarter of a mile below Cohoes falls) to two locks descent 18 feet—thence a quarter of a mile level and three locks descent 26 feet—thence level half a mile and seven locks with short pounds between descent 56 feet—here a feeder or branch of the Northern canal connects with the Western canal, which soon descends 22 feet by two locks—thence level seven miles to a lock of 11 feet descent—thence one mile and a half level to a point nearly east of the State arsenal in the north part of the city of Albany—here a lock of 11 feet descent connects the canal with the Hudson river. Opposite the city of Troy a branch connects with the Hudson by two locks of 11 feet descent each—also at Little Falls on the Mohawk, a large aqueduct over the Mohawk with three arches, one 70 feet chord, and two of 50 each to connect the old and new canal, and to operate as a feeder, this is a most permanent, solid and durable work which can be conceived, and built of the best materials, and the best workmanship.

No. III.—Those magnificent plans of internal improvement which have been projected, and are now rapidly executing by the State of New York, whose extensive physical resources they have contributed to develope, are destined to form the commencement of a new era in the history of this country—an era which will be distinguished as the period when the genius and enterprise of a free and powerful people are directed to splendid works of public utility, the effects of which will be felt to remotest posterity. For grandeur of design, celerity of execution, importance, and extent, the canals of New York, will admit of a comparison with the most celebrated artificial works of the old world. Independent of the immense advantages which

New York will derive from them, in the new and energetic impulse which will be given to her agriculture, manufactures and commerce, and as a constantly increasing source of revenue, they have a still stronger claim to our admiration from the important effects which they are calculated to have upon our internal policy as a nation. The political benefits, which they are destined to confer, begin already to exhibit themselves and afford conclusive evidence that the Union, cemented by such bonds, will be indissoluble. Viewed in this light the subject becomes peculiarly interesting and a brief description of the Erie canal, embracing its prominent outlines, by establishing the fact that there are no obstacles which industry and enterprise cannot overcome, may have an influence in exciting to similar undertakings.

This canal extends from Buffalo at the north-eastern extremity of lake Erie to the Hudson at Albany a distance of 360 miles. Its dimensions are 40 feet on the surface of the water, 28 feet at bottom, and four feet deep. Boats of 50 tons can navigate its waters. The expense was extenuated at five millions of dollars, and will not much exceed that amount. At Buffalo a safe and commodious harbour has already been constructed at an expense of about 15,000 dollars. [This place is hereafter destined to become the great commercial metropolis or mart of exchange of all that extensive tract of fertile country which is here washed by our northern inland seas, and their numerous tributaries. These advantages of location are duly appreciated, and in anticipation of its future importance it has already received the appellation of the 'New York of the lakes,' At the distance of two miles from Buffalo, and on the Niagara River is situated the village of Black Rock, through which the Canal passes and where it is contemplated to construct a still more spacious and extensive harbour, corresponding with the magnificence of the work with which it is intended to be connected.] Leaving Buffalo, the Canal runs along the shore of the Niagara river for 12 miles when it intersects the Tonawanta creek, across which a dam is thrown and a towing path constructed along its bank and the creek is there used as the canal for a distance of 12 miles. There it diverges and pursues a north-easterly course for seven miles and a half across the mountain ridge, as it is called, [a chain of highland which originates in Upper Canada, and running easterly parallel with lake Ontario, form in their course the Niagara, Genesee and Oswego Falls, and terminates in Oswego county.] The passage of the canal through this ridge presented one of the most serious obstacles on the whole route and one which

from the geographical formation of the country was unavoidable. The expense of this seven miles and a half, (which will average a depth of from 20 to 30 feet and includes three miles of rock) was originally estimated at \$500,000, but will no doubt require an expenditure of nearly double the amount. At this point the Canal is about 12 miles south of lake Ontario, [and here it passes through the village of Lockport, which, its name implies, has risen under its auspices, and though a year only has elapsed, now contains 180 buildings and 560 inhabitants, such are the important effects of the Canal in promoting settlement upon its borders.] The Canal here has a descent of 60 feet by means of five combined and double locks of 12 feet each, to what is termed the Genesee level, which from the favourable declivity of the country to the north, is extended easterly a distance of 65 miles without the incumbrance of a lock; passing through in its course the fertile and populous counties of Niagara, Genesee, and Monroe, and crossing the Genesee river at Rochester by a stone aqueduct 600 feet long, consisting of nine arches of 50 feet span each, and two of forty feet each, to convey water to mills,—the arches being a segment of a circle of eleven feet rise. From Buffalo to Rochester, a distance of 94 miles the Canal is supplied principally with water from the great reservoir lake Erie, and to facilitate the passage of the water and secure a constant supply a descent of half an inch to the mile is given to the Canal throughout that distance. And as the supply for the extended lower level, must be much greater than the lockage alone would require, a waste basin is constructed above the locks at the Mountain ridge over which the surplus can discharge itself and in its passage to the level below, to be applied to hydraulic purposes. Near Rochester the Canal approaches within four miles of the lake. [This place affords a striking instance of the astonishing increase of population and the rapid progress of improvement in the western parts of this state. It first began to assume consequence at the conclusion of the late war, since which time it has advanced with astonishing rapidity and now contains a population of 3500 souls. Situated in the heart of an extensive tract of rich and fertile country which already contains a dense and industrious population—enjoying from its position on lake Ontario and on the Canal a choice of markets for its products, with the capacity afforded by the Genesee of increasing its hydraulic machinery to an indefinite extent, added to the facility for the transportation of the raw material of manufacture produced by the Canal. Nature and art appear to have combined to contribute to its prosperity

and Rochester possessed of these advantages is unquestionably destined to become one of the greatest inland manufacturing and commercial sites in the United States.] On the E side of the river a lateral canal, or navigable feeder connects the Canal with the Genesee, at a point above which there is 40 miles of good navigation through an extremely fertile and populous district. The extended level of 65 miles terminates about two miles E of Rochester, when the Canal descends 37 feet by five locks in about two miles and continues that level eight miles and a half (passing through the village of Pittsford) when it again descends eight feet by one lock. It then crosses the heavy embankments in the valley of Irondequoit, which consists of several stupendous mounds of earth, the principal about 10 chains long and 70 feet high and under which there is a semicircular stone culvert of 24 feet chord and 250 feet long for the passage of the Irondequoit creek, and continuing the same level about 14 miles reaches the valley of Mud creek a tributary of the Canadaigua outlet—It thence follows down the valley of the creek and outlet, descending with the country and in its route crossing Mud creek by a stone aqueduct of three arches of 30 feet each and passing the flourishing villages of Palmyra and Lyons in Ontario county and through the village of Clyde and the Cayuga marshes in Seneca county, to the Seneca river. This embraces a distance of about 39 miles and a descent of 81 feet by nine locks which brings the Canal to the level of the Seneca river, through which it passes and over which a towing path bridge three fourths of a mile long has been constructed. By means of the Seneca river a communication is opened with Seneca and Cayuga lakes which stretch off at right angles to the Canal, about 40 miles into the interior and embrace a district of country which will compare for productiveness with any in the United States. On the E side of the river, there is a lock of seven feet rise to the village of Montezuma, when the Canal continues its course through Cayuga county a distance of 17 miles to Jordan in Onondago county, crossing in its course the Owasco outlet by an aqueduct of four arches of 20 feet each, and attaining by four locks an elevation of 36 feet above, the Seneca river, to the summit at Jordan—connected with the lock at Jordan, there is an aqueduct over the Skeneateles outlet of three arches of 20 feet each. The length of the Jordan summit is 12 miles, when the canal again ascends by a lock of 11 feet (and which is connected with an aqueduct of two arches of 30 feet each) and in a further distance of seven miles by another lock of six feet, to the Salina level and crosses the Ononda-

go creek, by an aqueduct of four arches of 30 feet each. Here a branch of one mile and a half extends to the salt works on the Onondago lake with which it is contemplated to open a communication by means of locks, and thus connect the canal with lake Ontario, through the Seneca and Oswego rivers. In a further distance of two miles and a half a rise of 26 feet by three locks elevates the canal to the Rome summit, an extended level of 69 miles and which passes through the important agricultural counties of Onondaga, Madison, Oneida, (through the villages of Rome and Utica,) and extends nine miles E of Utica into the town of Frankfort, in Herkimer county. At Rome 15 miles NW of Utica, the canal crosses the ridge which divides the waters which flow into lake Ontario, from those which empty themselves into the Hudson. From Rome westerly, as will be seen by an inspection of the map, the general declivity of the country is to the north and of course extremely favourable for the location of a canal. The only difficulty therefore which presented itself was the selection of such a level as would enable the canal to cross the dividing ridge and gain the valley of the Mohawk. At the distance of nine miles E of Utica, the canal commences descending the valley of the Mohawk. In the distance of about 13 miles it has a descent of 57 feet by seven locks to the head of the declivity at the Little Falls which it descends by five locks of eight feet each with short intervening pounds and in the distance of about twenty miles and a quarter a still further descent of 37 feet by five locks with intervening levels of from three and a half to five miles to Canajoharie in Montgomery county. This level extends 12 miles where it has a descent in four miles and a half of 13 feet by two locks to the Schoharie creek which is crossed by a dam and the creek introduced as a feeder. From this point to within three miles of Schenectady, a distance of about eighteen miles and a half the canal has a descent of 52 feet by six locks of eight, and one of four feet with intervening pounds of from a half to four miles and a half. Four miles E of Schenectady the canal crosses the Mohawk by an aqueduct 850 feet long and 21 feet above low water of the river. This aqueduct consists of stone abutments and piers supporting a wooden trunk. There are several others of a similar construction, but of a minor character at different points along the line where the distance between the bottom of the canal and the surface of the water in the stream crossed, was not sufficient to admit of the turning of an arch; but they are considered as temporary structures and were preferred from a wish to diminish the immediate expendi-

ture as far as practicable, and when they decay will be supplanted by permanent trunks of cast iron. Immediately after crossing the river the canal has a descent of 21 feet by three locks of seven feet each, and in about seven miles has a still further descent of 21 feet by three locks with intervening pounds of from one mile and a half to three miles and a half. It pursues the last level eight miles and crosses the Mohawk from the N to the S side by an aqueduct 1150 feet long and 16 feet above the river, when it ascends 32 feet by four locks of eight feet each with short intervening pounds. It now rapidly descends the declivity of the Cohoes Falls, having in about two miles a descent of 100 feet by 12 locks with short intervening pounds. Here a branch from the northern Canal intersects the Western Canal which soon descends 22 feet by two locks and then has a level of seven miles, when it again descends 11 feet by one lock, and in about one mile and a half by another lock of the same descent which connects it with the Hudson at Albany and opposite to the city of Troy a branch connects it with the Hudson by two locks of 11 feet each.

This statement exhibits a descent from the Rome summit to the Hudson, a distance of about 100 miles, of 417 feet by 52 locks. In the construction of the canal, through the valley of the Mohawk, numerous difficulties, exclusive of the great descent, and a judicious arrangement of the lockage presented themselves—and points of hills, elevated far above the level of the canal, frequently projecting into the river, and requiring the canal to be made for many miles in the bed of the stream. Consequently, great additional expense was necessarily incurred, in guarding it from the injuries to which it was liable, from the floods of the river. This was particularly the case in the vicinity of the Little Falls, and at the Cohoes, where also heavy excavations of rock were encountered. The expense of this section, was originally estimated at 2,200,000 dollars.

The dimensions of the locks are 90 feet, between the gates, and 15 feet in the clear; they are all constructed of the most solid and permanent mason work; the front of the walls, consisting of regular courses of at least a foot thick, united by the best hydraulic cement, and with the chamber of the lock, handsomely faced.

The Champlain canal is 22 miles long from Whitehall at the head of lake Champlain, to Fort Edward on the Hudson.

The valley of the Hudson rises by a more gradual acclivity than does that of the Mohawk. From the level of low tide in the Hudson river to a point on that stream one mile and a quarter above Waterford, the bed of the river ri-

ses about 35 feet, to render which passable, five locks are designed. Ascending eight miles and three quarters higher to a point between the mouth of Anthony's kill and Hosack river, another rise of nearly 53 feet takes place, in which distance the construction of seven locks are contemplated.

These 12 locks and 88 feet attain a summit, upon which the canal will be carried 18 miles on one level to the falls, at fort Miller. Here a rise of 16 feet is overcome by two locks. A dam above these locks and falls again produces a slack water of 16 miles to another fall at fort Edward. By four locks, and 36 feet ascent, the elevation of 140 feet, on the summit level between lake Champlain and Hudson's river, is attained. Along this summit level, the canal is cut 12 miles, to Cape Anne upon Wood creek branch of Pawlet river, flowing into lake Champlain.

At Cape Anne, the slope commences towards lake Champlain, and by a rapid depression of 26½ feet, and three locks, reaches another level 12 miles in length, reaching Whitehall at the mouth of Pawlet river. At the latter place three more locks descend 26 feet into lake Champlain.

The Champlain canal is nearly completed; it is indeed already navigable, but, contrary to the opinion of the commissioners in their report of January 31st 1818,* it is now found necessary to introduce a feeder from the Hudson, above Glen's falls, and as this source will be above the summit level, every section of the canal will be amply supplied.

By a resolution of the board of commissioners in 1813, the Erie canal was extended to 40 feet width at the surface, 28 at the bottom, and four deep of water. The locks were to be made 14 feet wide and 90 long in the clear. By a subsequent order of the board similar dimensions were given to the canal and locks, between Albany and lake Champlain.†

It is now confidently calculated that a complete inland navigation in the entire of both canals will be effected before the close of 1823.

In some instances, from the nature of the document, round numbers have been necessarily used, but, we believe, not to any extent which can very seriously affect the general correctness of the statement. The importance of the subject has rendered some amplification necessary.

New York, city and county of New York, situated on Manhattan island, between Hudson river, East river, New York bay, and Haerlem river. Lat. 40 42 N, and lon. 74° W from London, and 3 0 E from Washington, 143 miles below Albany, 90 NE from Philadelphia, and 210 SW from Boston.

The city and county of New York are commensurate, and occupy the whole of Manhattan island, which is about 12 miles long, and averages one and a half wide, with an area of 18 square miles

The city of New York, is composed of the city proper and Greenwich. The compactly built part commences at the battery, or point of confluence between the Hudson and East rivers, and gradually becoming more scattered, the buildings extend be-

tween three and four miles up each river. The streets in the lower, or ancient part are generally irregular; but the more modern streets are generally straight, and intersecting each other at right angles. The boast of New York, and perhaps the United States is Broadway, extending eighty feet wide, upwards of three miles. No style of building can be noticed as characteristic of New York. The private buildings vary, from the old, heavy Dutch mode, to the utmost refinement, and convenience of modern taste.

The city Hall claims the first notice amongst the public edifices of this city. It is 216 feet by 105; and 65 feet high. The front and ends are constructed of white marble, as are the columns in the inside and front. The expense of the entire structure upwards of \$500,000. It is occupied by the courts of law, and the city council. The governor of the state for the time being, has also, a room of audience in the second story. This room is decorated with portraits of distinguished Americans.

The New York, general Hospital, comprises a hospital for sick and disabled persons; as also a lunatic, and lying in Hospital. A medical library, containing between three and four thousand volumes is attached to this institution. The alms-house is situated on East river, above Carlaers Hook. It is a spacious but plain edifice, three stories high, 320 by 50 feet. It comprises a work-house, penitentiary &c. and cost about \$120,000. The state prison, is on the Hudson, in Greenwich.

In the rear of the city hall stands the institution, a long range of brick buildings containing the Museum, Lyceum of Natural History; halls of the Philosophical, and Historical Societies; the Deaf and Dumb Asylum; and the American Academy of the Fine Arts. The Historical Society has also a room for its truly valuable library, of upwards of 5000 volumes. The Museum is in the end room fronting Broadway.

Columbia college, King's college before the revolution, was founded in 1754; it has a president, five professors, and at present, 1822, about 150 students.

The college of Physicians and Surgeons, was founded in 1807; and in 1814, the Faculty of Medicine, was detached from Columbia college, and annexed to it. Thus united, the college of Physicians and Surgeons has become one of the most respectable foundations in the United States, with seven professors. The Elgin Botanic garden has been attached also to this institution.

The Theological Seminary formed in 1805, in this city, by the general Synod of the Associate Reformed church, has been removed to Princeton, and connected with

the Theological Seminary at the latter place.

New York possesses a theatre, custom-house, eight or nine market-houses, 11 banks, and 11 insurance companies. A society library containing upwards of 15,000 volumes. The number of daily, semi-weekly, and weekly newspapers, literary journals, magazines &c are very considerable. The places of public worship amount to near 60. Many of the churches are spacious and elegant structures.

In its exterior New York has the most imposing appearance of any city in the United States. The view from the Battery of the harbour, Staten Island, and the adjacent shores of Long Island and New Jersey has been very justly admired by almost every visitant. The harbour, or more correctly harbours of New York, are sufficiently extensive to admit the most numerous assemblage of shipping, and of sufficient depth to admit vessels of nearly the largest class. Being open to the tides it is only in very severe winters rendered inaccessible by ice. The principal mercantile harbour is that of East river; but the whole shore around from Corlaers Hook to Greenwich is generally accommodated with docks, for vessels of various descriptions. Beside packers, numerous team, and steam boats, ply across the respective ferries from New York, to Long Island, Staten Island and New Jersey. Regular lines of steam packets, run from that city to New Brunswick, the various towns on the Hudson, as high as Albany, and to Providence in Rhode Island.

It is in fact a city combining perhaps as many natural advantages as any other on the Globe. Its position is admirably adapted to connect the foreign commerce and inland trade of the United States. The two great canals uniting the basin of the Hudson to that of St. Lawrence, by two very important points of contact, will add incalculably to the already vast advantages of this great emporium. It is an astonishing fact that New York is now the second city in the world in point of shipping, tonnage, possessing more than one half as much as the city of London. In 1816, it amounted to near 300,000 tons. The annual custom-house receipts of this city amount to about one fourth part of the entire revenue of the United States. The revenue of the city itself, amounts to near \$500,000 annually.

New York, small post town of Champlain county, Ohio.

New Zealand, two large islands, in the South Pacific Ocean, divided from each other by a strait of about 12 miles wide. They are each about 600 miles long, and with a mean width of 100. Lon. from 181 to 194, lat. 34 to 38 S. The Aborigines are Savages. The British government has formed one or two settlements, in which attempts are making to introduce the arts of civilized life among the natives.

Neyland, town in Suffolk, with a market on Friday, and a manufacture of says, and bays. It is seated on the Stour, over which is a bridge, 16 miles SW of Ipswich, and 57 NE of London. Lon. 1 5 E, lat. 52 1 N.

Neytracht, town of Upper Hungary, capital of a county of the same name, with a bishop's see. It is seated on the Neytra, 40 miles NE of Presburg. Lon. 17 49 E, lat. 48 28 N.

Nezpique, river of Louisiana, the west branch of the Mermentau. It rises about 40 miles NW from the town of St. Landré, in Opelousas, flows S and joins the Plaquemine Brulé, to form the Mermentau.

Ngan-King-fou, the capital of the western part of the province of Kiang-nan in

China; its situation is delightful. All the country belonging to it is level, pleasant, and fertile. It has under its jurisdiction only six cities of the third class. Lon. 116 4 $\frac{1}{2}$ E, lat. 30 55 N.

Ngan-lo-fou, rich and populous city of China, in the province of Hou-quang, containing in its district, two cities of the second, and five of the third class. It is 425 miles W by S of Nanking.

Niagara, river of North America, between lakes Erie and Ontario. It is, strictly speaking, a strait uniting the two lakes.

It commences by a rapid, two miles NN W from the town of Buffalo. The rapid terminates at or a little below Black Rock, and assuming a placid current, with a width from half to one and a half mile wide, the river flows from Black Rock to the head of Grand Isle, seven miles, with a course nearly NW. Here it divides into two large branches, which, encircling Grand Isle, again re-unite three miles above the falls. Now upwards of a mile wide, and gradually contracting in breadth, and increasing in velocity, the whole mass approaches the great ledge, which forms the tremendous cataract of Niagara.

This ledge is itself a part of the vast floetz strata, which stretches along the southern shores of lake Ontario, crosses Niagara river, and reaches to an unknown distance into Canada.

Below Grand Isle, the river turns to a course of nearly west, which it continues to the falls, where it abruptly curves to N E, which it continues about a mile, from whence it assumes a northern direction, which with some partial bends it continues to lake Ontario. See the succeeding article, *Niagara Falls*.

Niagara Falls, is a cataract in Niagara river, formed by the intersection with that stream of the great ledge, noticed in the article Niagara river.

The following table exhibits the entire length of Niagara river, and the respective fall from Erie to Ontario.

	<i>Miles. Fall.</i>

Standing on either side of Niagara river above the Falls, the aspect of the adjacent country is that of a general level. Nothing announces an approach to the cataract, except the spray and cloud of vapour, which rises from the surge below.

The water is precipitated over an immense mass of limestone rock, which forms the bed of the river. The width of the river in a straight line, at the falls, is three-fourths of a mile. But as its principal force is exerted in the centre, the brow of the precipice has been worn in the shape of a horse-shoe, and its whole winding width is not less than a mile and a half. This distance is divided by a small woody island, called Goat island, near the American side, which divides the cataract into two. The elevation of this island above the surface of the stream is not very great, but it presents towards the north-west, a bold perpendicular front of bare solid rock, the whole height of the cataract. The width of the fall between Goat Island and the American side is about one-fifth of the whole, and that of the island itself another fifth; although the quantity of water on the British side is probably ten times as great as on the other. A bridge now connects the New York shore to Goat Island.

The Table Rock is a part of the Canada bank, which is on the margin of the great sheet of falling water. It furnishes altogether the most interesting view of the falls. The eye, looking up the river, beholds it tumbling with wild magnificence over the ledges of rock, which, seen from this place, seem close together, and appear to constitute a single broken cataract. The immense mass of waters, greatly increased in its rapidity by this descent, and perhaps still more by the contraction of the river, rolls with an apparently instantaneous motion to the brow of the precipice, and shoots over it into the abyss below. The depth of the precipice, the roar of the cataract, the mass of the waters, and, above all, the inconceivable exertion of power, overwhelm the mind with emotions of sublimity and grandeur; and fill it with new and clearer views of the weakness and littleness of man.

From the surface of the stream beneath, on the Canada side, there arises a thick and constant cloud of vapour, which mounts above the precipice to the height of more than 100 feet. In clear weather, three primary rainbows are frequently visible at once in various parts of this cloud. These, when the sun is near the horizon, appear complete semicircles, and are often of singular lustre and beauty. Beneath the fall lies a thick mass of foam, which, for a great extent, covers the surface of the water. The banks of the river below are on both sides perpendicular, of solid rock, and of the same height with those above the fall. They continue of this height seven miles to Queenstown. Here the cataract is supposed to have commenced after the deluge, and from this place to have worn its way backward to its present spot. No

one who examines the ground will doubt for a moment that this has been the case; and those who have lived for 20 years on the bank all attest this retrograde motion. These falls are in lat. 43 05 N.

Niagara, county of New York; bounded by Niagara river W; lake Ontario N; Genesee county E; and Tonawanta or Erie S. Length 33; mean width 20; and area 660 square miles. Surface generally hilly, though some tracts of level, and even marshy land skirt lake Ontario and Tonawanta river. The ridge, which forms the cataract of Niagara, occupies the middle part of this county from west to east. Soil productive in grain and pasturage. The Erie canal passes through its SE angle. Chief town, Lewistown. In the census of 1820, what is now Erie, was included in Niagara county, consequently the annexed table embraces both, or an area of 1610 square miles.

Nicobar Islands, several islands at the entrance of the gulf of Bengal. They are almost entirely uncultivated; but the cocoa nut, the meliori or lerrum (a kind of bread-fruit) and other tropical fruits, grow spontaneously to the greatest perfection. The largest of these islands is about 40 miles long, 15 broad, and the inhabitants are said to be a harmless sort of people, low in stature, but very well made, and surprisingly active and strong. They are naturally good humoured and gay, and are very fond of sitting at table with Europeans, and eat most enormously. There subsists among them a perfect equality. A few aged people, have a little more respect paid them, but there is no appearance of authority over one another. These islands extend northward, from the N point of Sumatra. The largest of them, which gives name to the rest, is 40 miles in length, and 15 in breadth. Its S extremity in lon. 94 23 E, lat. 8 0 N.

Nicojack, remarkable cave, or cavern of the Lookout mountain in the Cherokee country, out of which flows an immense stream of water. It is about one mile and a half from Tennessee river, and near where the boundaries of Georgia and Alabama reach that stream.

Nicolayef, city of Russia, in the government of Catherine'slav, founded by Catharine II. on the S side of the Ingul, at its conflux with the Bog. The public buildings and a number of private houses are constructed of a white calca-

reous stone, but the rest of the houses are of wood. This place being of easier access by water for vessels than Cherson, it is now the capital of the naval establishment of the Black Sea. The admiralty, with a long line of magazines, workshops, wet and dry docks, and every necessary department for shipping, are placed along the bank of the Ingul. It is 30 miles NNE of Oczakow, and 45 NW of Cherson. Lon. 30 46 E, lat. 46 58 N.

Nicolas, St. one of the largest of the Cape de Verd Islands, between St. Lucia and St. Jago. It is 75 miles in length; and the land is stony, mountainous, and barren. Lon. 14 10 W, lat. 16 32 N.

Nicolet, river of Lower Canada, rises in Buckingham county, by two sources, which flow NW between Becancour and St. Francis rivers, unite about 60 miles, unite and fall into the lower end of Lake St. Peter, 10 miles above Three Rivers.

Nicolo, St. the most considerable and most populous town of the isle of Tremeti, in the gulf of Venice. It has a harbour, defended by a fortress, in which is an abbey and a church. Lon. 15 37 E, lat. 42 10 N.

Nicomedia, town of Turkey in Asia, in Natolia, now called Ischmich, or Schmit. It was formerly a large place, as appears by the fine ruins; and now contains 30,000 inhabitants, who consist of Greeks, Armenians, and Turks. It is still a place of consequence, and carries on a trade in silk, cotton, glass and earthen ware. It is the see of a Greek archbishop, and is 50 miles SW of Constantinople. Lon. 29 30 E, lat. 40 30 N.

Nicophli, town of European Turkey, in Bulgaria, famous for a battle fought between the Turks and the Christians in 1396, when emperor Sigismund was defeated, and had 20,000 men killed. It is seated on the Danube, at the influx of the Osma, 60 miles SSW of Buchorest, and 150 NNW of Adrianople. Lon. 25 43 E, lat. 44 16 N.

Nicophli, ancient town of Armenia, built by Pompey the Great, in memory of a victory gained over Mithridates. It is seated on the Cerauna, 165 miles SW of Erzerum. Lon. 37 55 E, lat. 38 15 N.

Nicosia, strong town, capital of the island of Cyprus, and the residence of a Turkish bashaw, delightfully seated between the mountain Olympus and a chain of other mountains. It was formerly well fortified by the Venetians, but now the

works are in ruins. It is three miles in circumference; and there are plantations of olives, almonds, lemons, oranges, mulberries, and cyprus-trees, interspersed among the houses, which give the town a delightful appearance. The church of St. Sophia is an old Gothic structure, which the Turks have turned into a mosque, and destroyed the ornaments. It is 100 miles W of Tripoli, and 160 SW of Aleppo. Lon. 54 45 E, lat. 34 54 N.

Neufort, seaport of Austrian Flanders, seated on the German Ocean, at the mouth of the Yperlee. It has been taken and retaken in various wars, the last time by the French in 1794. It is nine miles SW of Ostend, and 16 NE of Dunkirk. Lon. 2 45 E lat. 51 7 N.

Niger, large river of Africa, formerly very little known. In order to ascertain the rise, course, and termination of the Niger, Mr. Parke was sent out by the African association, in 1795. The course of the river which was formerly supposed to be from E to W, but has been determined by Mr. Parke to flow N through the country of Mandingo, and then take an easterly course through the kingdoms of Bambara, Tombuctoo, Trecur, and Ghana, to Wangara, where it divides into several branches. The Moors and Arabs call it Neel il Abeed, or River of Slaves, and N el Kibeer, or Great River. In the rainy season it swells above its banks, and floods the adjacent lands. Since the expeditions of Mr. Parke several subsequent ones have been fitted out by the British government to explore this stream, and to determine its course and point of discharge. All those expeditions have proved unfortunate and abortive, as the to main object of research. It is, however, a subject of no reasonable doubt, but that it flows into the Atlantic Ocean. Its connexion with the Nile is rejected by the best geographers.

Nigrittia. See *Aegroland*.

Nikoping, town of Denmark, capital of the island of Falster, or Hulster, in the Baltic, with a strong fort, 55 miles SW of Copenhagen. Lon. 12 7 E, lat. 54 59 N.

Nikoping, town of Sweden in Sudermania, 60 miles SW of Stockholm. Lon. 16 40 E, lat. 58 40 N.

Nile, great river of Africa, which, according to Mr. Bruce, rises in Abyssinia, near the village of Geesh, in lon. 36 55 E, lat. 10 59 N. It runs first through the lake D mbea, then makes a circuit towards its source, which it leaves 25 miles to the E, and enters into Nubia, through which country it makes a circuitous course, and forms some considerable cataracts. It then flows almost directly S through Egypt, till it arrives at Cairo; and a little below that city it divides into two great branches, which, with the Mediterranean sea form the island called Delta. The ancients reckoned eleven mouths of the Nile, of which seven were considerable; but now there are only two that are navigable at all times; and those are at Rosetta and Damietta. In the middle of this river, between Old Cairo and Gizeh, is seated the island of Rodda, which is almost as long as Old Cairo, and 500 paces in breadth in the middle; and the front of the Mekias takes up all the breadth of the southern part. This is the work of the Saracens, and derives its name from its use, for it signifies measure. In reality they observe there every day, by means of a graduated column, the increase or decrease of the waters of the Nile. This river overflows regularly every year, from the 15th of June to the 17th of September, when it begins to decrease. The fertility of Egypt depends upon the overflowing of the Nile; and they reckon it will be a bad year when it is less than 14 cubits or above 18; but 16 cubits is the proper height. During the inundation, the little towns, standing upon eminences, look like so many islands, and they go from one to the other by boats. In Cairo there is a canal called Khalis, which is opened when the water is high enough; thence it is conveyed into reservoirs and cisterns, and is afterwards distributed into the fields and gardens, as occasion requires. This inundation of the Nile is caused by the periodical rains which fall every year between the tropics, and more particularly in Abyssinia, which is full of high mountains.

Nile, SW township of Sciota county, Ohio. Population 1820, 524.

Nimeguen, city of Holland, capital of Gelderland, with a citadel, an ancient pa-

lace, and several forts. It is also the capital of a country of its name, or of the island of Betuwe, the ancient Batavia. It is seated on the Waal, 35 miles SE of Utrecht, and 70 NE of Antwerp. Lon. 5 45 E, lat. 51 55 N.

Nogarcot, town of Hindoostan, Proper, noted for a celebrated pagoda. It lies in

the province of Napoul, and is 50 miles NE of Catmandu. Lon. 85 12 E, lat. 28 40 N.

Nogayans, name of a Tartar nation which occupy the deserts on the northern side of the Euxine and the Caspian Sea, and on the northern side of Mount Caucasus; besides several settlements to the W and NW of the Euxine; in such a manner that they occupy the lower part of Volga, the rivers Terek, Kouma, and Kouban, the environs of the Palus Mæotis, the borders of the Tanais in the peninsula of the Crimea, and the banks of the Borysthenes and the Dniester, to the other side of the Danube.

Nogent-sur-Seine, town of France, in the department of Aude, and late province of Champagne, seated on the Seine, 25 miles NW of Troyes. Lon. 3 40 E, lat. 48 30 N.

Nogent-le-Rotrou, pretty populous town of France, in the department of Eure and Loire, and late province of Brauce, seated on the Huisne, 35 miles NE of Mans. Lon. 0 50 E, lat. 48 26 N.

Noir, Cape, promontory of South America, at the S extremity of Terra del Fuego. Lon. 73 3 W, lat. 54 32 S.

Noirmotier, island of France, near the mouth of the river Loire. It is 17 miles in length, and eight in breadth, full of bogs, and yet there are good pastures. The English attacked it without success in 1795. The principal town is of the same name. Lon. 2 10 W, lat. 47 0 N.

Nola, ancient town of Naples, in Terra di Lavora, with a bishop's see, 10 miles NE of Naples. Lon. 14 28 E, lat. 40 56 N.

Nolachucky, river of Tennessee, and North Carolina, rises in the northern part of Buncombe county of the latter, and flowing W, enters Carter county in the former, and crossing Carter, Washington, and Greene joins the French Broad, 40 miles above its junction with the Holston at Knoxville.

Noli, town of Italy, in the territory of Genoa, with a bishop's see, and a good harbour. It is five miles NE of Fmal and 30 SW of Genoa. Lon. 8 41 E, lat. 44 18 N.

Nombra-de-Dios, town of Terra Firma, in the province of Darien, a little E of Porto Bello, to which its once flourishing trade is now transferred. Lon. 78 35 W, lat. 9 40 N.

Nomeny, town of France, in the department of Meurthe, and late province of Lorrain, seated on the Selle, 15 miles N of Nanci. Lon. 6 15 E, lat. 48 56 N.

Non, Cape, promontory of Africa, op-

posite the Canary Islands. It was long considered by the Portuguese, in their attempts to explore Africa, as an impassable boundary, denoted by its name. But they doubled it at last, in 1412. Lon. 10 30 W, lat. 28 30 N.

Nona, small but strong town of Hungarian Dalmatia, with a bishop's see. It is seated near the sea, seven miles N by W of Zara. Lon. 16 10 E, lat. 44 35 N.

Nontron, town of France, in the department of Dordogne, and late province of Perigord, 21 miles N of Perigueux, and 30 SSW of Limoges. Lon. 0 33 E, lat. 45 32 N.

Noofour, town of Hindoostan Proper, in the province of Guzerat, 55 miles E of Surat, and 142 W of Burhampour. Lon. 73 50 E, lat. 21 11 N.

Noorden, considerable town of Westphalia, 12 miles N of Embden, Lon. 7 5 E, lat. 53 38 N.

Nootka. See *King George's Sound*.

Noquet's, bay of Michigan territory, on its SW coast. It sets inland, 45 miles.

Norberg, town of Sweden, in Westmanland, 34 miles N of Stroemsholm. In its vicinity are the best iron mines in the province. Lon. 16 12 E, lat. 62 2 N.

Norcia, town of Italy, in the duchy of Spoleto, seated among the mountains, on the river Fredara, 20 miles SE of Spoleto.

Nord, department of France, so named from being the most northern in situation. It includes the late French provinces of Hainault, Flanders, and Chambresis. Douay is the capital.

Nordburg, town of Denmark, at the N extremity of the isle of Alsen, with a castle, nine miles NNW of Sunderburg.

Norden, seaport of Westphalia, in East Friesland, and a considerable place of trade, with a good harbour. It is four miles from the German Ocean, and 1½ N of Emden. Lon. 7 13 E, lat. 53 32 N.

Nordgau. See *Bavaria, Palatinate of*.

Nordhausen, town of Upper Saxony, in Thuringia, with seven Lutheran churches, and a well-built orphan-house. It has a considerable trade in corn, brandy, and rape, and linseed oil, with manufactures of marble and alabaster. It is seated on the Zorge, 35 miles NNE of Erfurt. Lon. 10 56 E, lat. 51 30 N.

Nordheim, town of Lower Saxony, in the duchy of Brunswick, situate on the Rhume, at its conflux with the Leina 10 miles N of Gottingen.

Nordkoping, seaport of Sweden, ca-

pital of East Gothland. It is 10 miles in circumference, but the houses are scattered, and the inhabitants do not exceed 12,000. The river Motala flows through the town, forms a series of cataracts, and is divided into four principal streams, which encircle several rocky islands, covered with buildings; but at the extremity of the town it is navigable for large vessels. Here are manufactures of woollen cloth, paper, and fire arms; some sugar-houses, and a brass foundry. corn is exported hence in great quantities; and a salmon fishery gives employment and riches to many of the inhabitants. It is 110 miles SW of Stockholm. Lon. 15 50 E, lat. 58 35 N.

Nordland, one of the five grand divisions of Sweden, bounded on the N by Lapland, E by the gulf of Bothnia, S by Sweden Proper, and W by the same and Norway. It contains six provinces.

Nordlingen, town of Suabia, fortified in the ancient manner. Here the league of the five western circles of the empire was concluded in 1702. In 1796, it was taken by the French. It is a commercial place, seated on the Eger, 38 miles NNW of Augsburg. Lon. 10 34 E, lat. 48 50 N.

Nordmaling, town of Sweden, in Angermania, near a bay of the gulf of Bothnia, 24 miles SW of Uma, and 70 NE of Hermosand.

Nordstrand, island of Denmark, on the W coast of S Jutland, 12 miles long and five broad. It has a town called Hams 28 miles W of Sleswick. Lon. 9 0 E, lat. 54 40 N.

Norfolk, county of England, 77 miles long and 45 broad; bounded on the N and E by the German Ocean, SE and S by Suffolk, and W by Cambridgeshire and Lincolnshire. It contains 1,694,409 acres; is divided into 32 hundreds, and 660 parishes; has one city and 32 market towns; and sends 12 members to parliament. Population in 1801, 273,371; in 1811, 291,999; and in 1821, 341,368. The products vary according to the soil and situation. The lighter arable lands produce barley in great plenty; wheat is cultivated in the strongest soils; and turnips are grown here in great quantities: much buck-wheat is also grown in the light soils, and used for feeding swine and poultry. The fenny parts yield great quantities of butter; which is sent to London under the name of Cambridge butter. The sheep are a hardy small breed, much valued for their mutton. Turkeys are reared here to a larger size than elsewhere; rabbits are extremely numerous on the sandy heaths; and there is abundance of game especially of pheasants. The manufactures of Norfolk are worsted, woollen, and silks. Its principal rivers are the

Great Ouse, Nen, Little Ouse, Waveney, Yare, and Bure. Norwich is the capital.

Norfolk Island, island in the Pacific Ocean, lying E of New South Wales, and settled by a colony of convicts, subordinate to that government. It was discovered in 1774, by captain Cook, who found it uninhabited, except by birds. It is very hilly, but some of the valleys are tolerably large. Mount Pitt, the only remarkable hill 12,000 feet high. The whole island is covered by a thick forest, but has not much underwood; and the principal timber tree is the pine, which is very useful in building, and seems to be durable. The soil, when cleared, may be rendered very productive. The spring is perceptible in August; but the trees are in a constant succession of flowering and fruiting the year round. In summer the heat is excessive; and from February to August may be called the rainy season; and the winter, from April to July, is very pleasant. The island is supplied with many streams of good water, which abound with very fine eels. The cliffs round the coast are 240 feet high, quite perpendicular; and anchorage is safe all round the island, on taking the lee side; but there is no harbour. The settlement was made by a detachment from Port Jackson, 1788, in Sydney bay, on the S side of the island. Lon. 168 12 E, lat. 29 4 S.

Norfolk, county of Massachusetts, bounded by Rhode Island SW; Worcester in Massachusetts W; Middlesex NW and N; and Suffolk county, Boston harbour, and Hull bay, NE. Length 30, mean width 13, and area about 400 square miles. Surface uneven rather than hilly. Soil productive in grain; fruits, and pasturage. Chief town, Dedham.

Norfolk, post town, borough, and port of entry, Norfolk county, Virginia, on the right bank of Elizabeth river, immediately below the junction of its two branches, and eight miles above Hampton roads. Lon. from the Royal Observatory at Greenwich, 76 23 W, and from W C, 0 37 E.

It is the most commercial town of Virginia; and in 1815, the tonnage exceeded 34,700, and stood next to Charleston of any of the United States, south from Baltimore. It is defended by several forts, the most important of which is on Craney island, near the mouth of Elizabeth river, about five miles below the town. The United states Commissioners, who were ap-

pointed in 1818 to survey the lower part of the Chesapeake bay, reported, that Hampton Roads, though extensive, were capable of adequate defence. so as to prevent the entrance of an enemy's fleet.

Norfolk is connected with the commerce of North Carolina by the Dismal Swamp canal. This inland communication opens from Elizabeth river, nine miles above Norfolk, and extends through the Dismal Swamp, into Albemarle sound. By means of this canal the produce of an extensive section of North Carolina finds a market at Norfolk.

This town contains a theatre, two state banks, a branch of the bank of the United States, a marine hospital, orphan asylum, an academy, Lancasterian school, Athenæum, and six or seven places of public worship. The site is level, and so low in some places as to be marshy; but the streets are commodious, being well paved.

Norfolk County, Upper Canada, is bounded on the N and E by the county of Lincoln and the river Thames; on the S by lake Erie, until it meets the Orwell river; thence by a line running N 16 degrees W, until it intersects the river Thames, and thence up the said river, until it meets the NW boundary of the county of York. It sends, in conjunction with the fourth riding of the county of Lincoln, one representative to the provincial parliament.

Norland, one of the five general divisions of Sweden, comprehending the provinces

of Gestrikeland, Helsingland, Medelpadia, Hiemmland, Herjedalia, Ongermania, and West Bothnia.

Norman, Mais, Upper Canada, in the township of Newark, empties its waters into Lake Ontario, about the centre of the township W of Niagara Fort, called the Four Mile Pond.

Normandy, late province of France, bounded on the W by the Atlantic, N by the English channel, E by Picardy and the Isle of France, and S by Perche, Maine, and Bretagne. The Normans, a people of Denmark and Norway, having entered France under Rollo, Charles the Simple ceded this country to them in 912, which from that time, was called Normandy. Rollo was the first duke, and held it as a fief of the crown of France, and several of his successors after him, till William, the seventh duke, conquered England, in 1066, from which time it became a province of England, till it was lost in the reign of king John, and re-united to the crown of France. The English, however, still keep possession of the islands on the coast, of which Jersey and Guernsey are the principal. It is one of the most fertile provinces in France, and abounds in all things except wine, but that defect is supplied by cider and perry. It contains iron, copper, and a great number of rivers and harbours. This province now forms the departments of Calvados, Eure, Manche, Orne, and Lower Seine.

Norridgewock, post town and township, Somerset county, Maine, lying on the S side of Kennebec river, 35 miles NW of Augusta, with 880 inhabitants in 1810; and in 1820, 1454.

Norridgewock, town and seat of justice, Somerset county, Maine, in the foregoing township, 35 miles W by N from Hallowell.

Norristown, capital of Montgomery county, Pennsylvania, situated on the NE side of the Schuylkill river, 17 miles above Philadelphia. It contains, the county buildings, a bank, and an academy. Population in 1820, 827.

Norriston, township of Montgomery county, Pennsylvania, around the borough of Norristown. Population, in 1820, 1098.

Nortelga, or *Nor Telge*, maritime town of Sweden, in the province of Upland, near which is a forge for making fire arms. It was much injured by the Russians in 1719, who ravaged the town. It is 50 miles NE of Stockholm. Lon. 10 32 E, lat 50 44 N.

North, township of Harrison county, Ohio, in which is situated the village or town of New Ramley. Population in 1820, 1118.

North Adams post village of Berkshire county, Massachusetts.

North America, post village of Dutchess

county, New York, 25 miles E from Rhinebeck.

North, or *Nord*, department of France, which comprehends the late French Provinces of Hainault, Flanders, and the Cambrésis.

North Cape, most northern promontory of Europe, on the coast of Norway. Lon 25 57 E, lat. 71 20 N.

North Coast, department of France. See *Cotes du Nord*.

North Ferry, small town at the N side of the Frith of Forth, at the Queen's ferry passage. It formerly had a chapel endowed by Robert I.

Northallerton, borough in the N riding of Yorkshire, with a market on Wednesday. It sends two members to parliament, and is seated on a small brook, which, a mile below, runs into the river Wisk. It is a well built trading place, 30 miles NNW of York, and 223 N by W of London. Lon. 1 20 W, lat. 54 23 N.

Northampton, borough and the capital of Northamptonshire, governed by a mayor, with a market on Saturday. It is seated on the Nen, which is navigable to Lynn, and was formerly surrounded by a wall, and had a castle. It was almost entirely destroyed by fire in 1675, but was soon rebuilt. It has four churches, a spacious market-place, a good free-school, and a county infirmary and jail. The principal manufacture is boots and shoes, of which many are made for exportation. In the meadows below the town, a battle was fought in 1460, between Henry VI. and the Yorkists, in which the former was defeated and made prisoner. Two miles to the S is an ancient structure, called Queen's Cross, erected by Edward I. in memory of his queen Eleanor. This town is 30 miles SE of Coventry, and 66 NW of London. Lon. 1 11 W; lat. 52 11 N.

Northampton, county of England, 60 miles long and 22 where broadest; bounded on the S by Buckinghamshire and Oxfordshire, W by the latter county and Warwickshire, NW by Leicestershire and Rutlandshire, N by Lincolnshire, and E by the counties of Cambridge, Huntingdon, and Bedford. It contains 617,000 acres; is divided into 20 hundreds, and 336 parishes; has one city and 11 market towns; and sends nine members to parliament. In the north-east part, near Peterborough, commences a fenny tract, extending to the Lincolnshire Wash. With this single exception, Northamptonshire is said to contain less waste ground, and more seats of the nobility and gentry, than any other county. Its greatest defect is a scarcity of fuel, which is but scantily supplied by its woods; and though coal is brought by the river Nen, it is at a very dear rate. This county, however,

possesses some considerable remains of its old forests, particularly those of Rockingham on the NW, and of Salcey and Whittlebury on the S. Its products are, in general, the same with those of other farming counties; but it is peculiarly celebrated for grazing land. Horned cattle, and other animals, are fed to extraordinary size; and many horses of the large black breed are reared. Woad for the dyers is cultivated here; but the county is not distinguished for manufactures. The principal rivers are the Nen and Welland; beside which it is partly watered by the Ouse, Leam, Chorwell, and Avon. Population in 1801, 131,757; in 1811, 241,353; and in 1821, 163,433.

Northampton, town of York county, New Brunswick.

Northampton, township of Rockingham county, New Hampshire, on the Atlantic Ocean, seven miles SW from Portsmouth. Population in 1820, 764.

Northampton, post town and seat of justice, Hampshire county, Massachusetts, on the right bank of Connecticut river, in a delightful country, 18 miles above Springfield, and 42 above Hartford. The aspect of the adjacent country is not only pleasant, but highly romantic. The neighbouring mountains, particularly Mount Holyoke, afford some of the finest landscapes in New England. It contains the county buildings, one bank, one insurance office, a weekly news-paper, and several manufactories. Population in 1810, in the township 2631; and in 1820, 2854.

Northampton, township of Montgomery county, New York, containing 1474 inhabitants in 1810; and in 1820, 1291. About 60 miles NW of Albany.

Northampton, township of Bucks county, Pennsylvania, containing 1176 inhabitants in 1810; and in 1820, 1411. It is situated on the SW of Neshaminy creek, eight miles SE from Doylestown.

Northampton, township of Burlington county, New Jersey, seven miles SE from Burlington. Population in 1810, 4171; and in 1820, 4833, including Mount Holly.

Northampton, or *Allentown*, post town and seat of justice, Lehigh county, Pennsylvania, on the point above the confluence, between Lehigh river and Little Lehigh creek above their junction, six miles SSW from Bethlehem, 18 miles SW from Easton, and 55 NNW from Philadelphia. It is situated in a well cultivated and fertile settlement. The site is elevated and pleasant. It contains, beside the county buildings, a bank, printing office, several dry good stores, and a number of merchant mills. The principle staple, flour. An elegant wooden bridge, resting on stone arches, has been erected over the Lehigh, on the road to Easton and Bethlehem. A

substantial bridge also crosses Little Lehigh, on the Philadelphia road. The Lehigh is here turned at nearly right angles by the South Mountain.

Northampton, county of Pennsylvania, bounded by the Delaware river, or Sussex county, in New Jersey, E; Bucks county SE; Lehigh and Schuylkill counties, SW; Luzerne county NW; and Pike county, N; length 37; mean width, 30; and area 1,000 square miles.

This is one of the most diversified counties, not alone of Pennsylvania, but of the United States. It is traversed from NE to SW by the Kittatinny mountains, or, as it is locally called in the country, Blue Ridge. This chain divides it into two very unequal sections. That SE from the Kittatinny lies in the form of a triangle, the base along the mountains, and perpendicular on Lehigh county, and contains within a trifle of 400 square miles. It contains also the townships of Lower Saucon, Williams, Bethlehem, Forks, borough of Easton, Hanover, Nazareth, upper and lower, Allen, Lehigh, Moore, Bushkill, Plainfield, and upper and lower Mount Bethel; with an aggregate population of 22,030. This part of Northampton county, with the exception of the townships of lower Saucon and Williams, lies between the Kittatinny and South Mountain. The surface, though generally hilly, is as generally arable. The very remarkable slate and lime-stone formation which extends so distinctively from the Delaware to the Susquehanna, in the Kittatinny valley, is peculiarly striking in the lower part of Northampton. The lime stone tracts skirts the south mountain, and the argillaceous slate the Kittatinny, each extending from its respective base about half way across the valley. Though both are highly productive, in grain, fruits, and pasturage, the limestone soil is rather stronger than that of the slate, and the features of nature less bold on the former than on the latter formation.

The townships of lower Saucon and Williams are separated from the other parts of the county by Lehigh, and traversed by a ridge passing by Bethlehem, and interrupted by the Delaware, two miles below Easton. From many of the highest eminences of this range, the highly cultivated section we have been reviewing spreads before the eye like a vast garden, terminated by the distant Kittatinny mountains.

That part of Northampton north-west from the Kittatinny mountains, extends over 810 square miles, and is remarkably broken into mountain ridges. Of these the Kittatinny is the only one which

passes through the county in a direct line. Those in the north-west are scattered, disunited, and lie rather in groups than extend to collateral ridges. All, however, have a general north east and south-west arrangement, and leave intervening valleys of more or less width and fertility. As in other parts of Pennsylvania, the Northampton ridges receive local names in different places. The principal ones are, beside the South Mountain, or Lehigh hills, and Kittatinny, the Pokono, or second Mountain, Broad Mountain, Mauch Chunk mountain, and some others. The soil in the valleys above Kittatinny, even where arable, is much inferior to that of the lower sections already noticed. The general character of the latter is warm and productive. Above the Kittatinny the soil is principally composed of gravel and clay, and still farther above the Pokono, partakes so much of the clay as to become very cold and unproductive. The timber, hemlock, and small pines. The rude character of this part of Northampton is seen by reference to its comparative population. Though embracing above 800 square miles, the aggregate number of inhabitants is only 9735, or within a trifling fraction of 10 to the square mile, whilst, as we have seen, the south-east section contains a condensed population of near 57 to the square mile.

The rivers of Northampton, are the Lehigh and Delaware. Creeks below Kittatinny, and advancing south-west from the Delaware Water Gap, are Cosby's, Richmond, Martin's, Muddy creek, Bushkill, Menocacy, Calesoque, and Hockendocque; the three latter falling into the Lehigh, the residue into the Delaware.

Above the Kittatinny, the Delaware receives, immediately above the Water Gap, Broadhead's creek, partly from Pike and partly from Northampton. The mountain section of this county is, however, more particularly drained by the confluents of the Lehigh; these are, from the left, Tobyhanna, Dreck, Muddy, Big creek, and Aquanshicola; from the right, Quacake, Nesquehoning, Mahoning, and Lizard creeks.

Delaware washes the eastern border of Northampton, following its windings about 25, but in a direct line 20 miles; its course generally nearly north and south. Though obstructed with some shoals below that place, the Delaware is navigable for large boats to Easton, and for smaller vessels, and with more difficulty to above that borough beyond the limits of Pennsylvania.

The Lehigh is emphatically the river of Northampton, having most of the source

ces, and the greatest part of its course, in that county. This stream demands particular notice, as it has now become the channel of transportation for the immense masses of anthracite coal found in the Mauchchunk mountain. The Lehigh, in fact, rises in Wayne, Pike, and Luzerne counties; but its various confluents unite near Stoddartsville, on the north-west border of Northampton, and again augmented by many mountain creeks, flows by comparative courses 25 miles to the mouth of Wright's mill creek. It thence turns to nearly south, and by a very serpentine course, but in a direct line of about 20 miles, passes Mauchchunk, and reaches Lehigh. Here it inflects to south-east, and continues in that direction 25 miles to Allentown, or town of Northampton. At Allentown the Lehigh is again turned to the South Mountain at nearly right angles, and assuming a north-east course down the foot of the mountain, flows past Bethlehem, and reaches the Delaware at Easton, 25 miles below Allentown. The entire comparative course of this stream is 85 miles. From near its extreme course to Trout creek, it separates Pike and Luzerne counties. From Trout creek to Rock Eddy falls it separates Northumberland from Luzerne. Below Rock Eddy falls to its passage through the Blue or Kittatinny mountain, its course is within Northampton county. Between its passage through the mountain and the mouth of the Hockendocque creek, its course forms the limit between Northampton and Lehigh counties. Below Hockendocque to Bethlehem, it flows through Lehigh, and below Bethlehem to Easton through Northampton.

The Lehigh is truly a mountain torrent, and meanders through a series of natural scenes, not excelled, if equalled in the United States. The following table will exhibit its descent from Stoddartsville to Easton.

Stoddartsville to the mouth of the Nesquehoning creek about two miles above Lausanne, and three miles above the village of Mauchchunk,	<i>Fall in feet.</i>

From Easton, to tide water in Delaware river at Trenton, according to the latest information, that stream falls about 100 feet. The Lehigh at Stoddartsville is, therefore, elevated 1310 feet, and at Mauchchunk, within a trifle of 460 feet,

above the level of the Atlantic Ocean. According to the manuscript notes of Isaac A. Chapman, Esq. the average height of Kittatinny mountains, in Northampton, is 1186 feet above the Lehigh, and Delaware rivers, at its base, consequently, 1491 feet above the Atlantic level. Mr. Chapman estimates the height of Pokono mountain above its base, at 850 feet; which, when compared with the foregoing elements, yield 1305 feet, for the elevation of that ridge, above the ocean.

Mauchchunk mountain, at the coal-mine, is 1006 feet above the Lehigh at Mauchchunk village. We have seen, that the village stands 460 feet above the Atlantic level; therefore the justly celebrated coal mine is 1466 feet above the surface of the Atlantic. I may, however, remark, that some of the peaks of Mauchchunk mountain, between the mine and the village, must rise several hundred feet higher than the coal mine, and higher than the general elevation of the Kittatinny, as I have myself stood on two eminences of the Mauchchunk, and saw distinctly, the South mountain over the intervening Kittatinny.

We may safely assume, the general elevation of the cultivated part of Northampton, in the Kittatinny valley, from 250 to 350 feet; and for that section above the Kittatinny, a general elevation of from 500 to 600 feet. Mr. Chapman observes, that there is a difference in the seasons and vegetation of two weeks between the respective sections. The difference of elevation and exposure, exhibits the cause of this rapid change of temperature.

We will close this rather lengthy view of Northampton with a notice of its principal roads and towns.

A main turnpike road leaves Philadelphia, passes through Philadelphia, Montgomery, Bucks, and part of Lehigh counties; enters Northampton in the township of Lower Saucon, and crosses the Lehigh at Bethlehem. Here it branches into two routes. One turns NW up the Lehigh, and passing by Kreiderville, through the Lehigh Water Gap, by Lehigh, Mauchchunk, and Lausanne, continues on to the banks of the Susquehanna, at Nesquehoning. From Bethlehem, the other, or northern branch, proceeds towards Easton, but breaks into numerous country roads, one of which leads on to Nazareth, and to the Delaware Wind Gap. The lower Philadelphia road reaches Easton, between the foregoing and Delaware river. Above Easton, a main road extends a little W of N, to the Wind Gap. Here it branches into two routes.

one continuing NW, to Wilkesbarre, and the other N, into Pike county. From Easton, another road leads up the Delaware to the Water Gap. Beside these, numerous cross roads chequer the lower part of Northampton county, and render communication easy and convenient.

Northampton contains the borough of Easton: and the villages of Bethlehem, Hellerstown, Stroudsburg, Burlington, Mauchchunk, and Lehigh. See these articles under their respective heads, either in the Text, or Addenda. Staples of Northampton county, grain, flour, cyder, whiskey, salted provision, live stock, lumber, and mineral coal.

Northumberland, county of England, which received its name from being situated N of the Humber. In the Saxon Heptarchy it was a part of the Kingdom of the Northumbrians, which contained also the counties of York, Lancaster, Durham, Cumberland, and Westmoreland. It forms the N

extremity of England, and is bounded on the E by the German Ocean, and on the S by the bishopric of Durham, on the SW and W by Cumberland, and on the NW and N by Scotland, from which it is separated by the Tweed. It extends 70 miles from N to S, and 50 from E to W. It lies in the diocese of Durham; contains 12 market-towns, and 460 parishes; and sends eight members to parliament. Population 1801, 157,101; in 1811, 172,161; and in 1821, 198,965. The air of this county is not so cold as might be imagined from the lat. in which it lies; for its situation between two seas, in the narrowest part of England, gives it the advantage of having the cold moderated by the vapours of each; and, for this reason, the snow seldom lies long in this county, except on the tops of high hills. The air is very healthful, and the people who generally live to a great age, are seldom afflicted with sickness. The soil is various, the eastern part, which is fruitful, having very good wheat, and most sorts of corn, and has rich meadows on the banks of the rivers; but the western part is generally barren, it being mostly heathy and mountainous. The SE part abounds with pit coal, of which 658,858 chaldrons are computed to be annually shipped from thence to London. There are also large quantities of lead and timber. The principal rivers are the Tyne, the Tweed, and the Cocket. Alnwick is the county town, but the largest is Newcastle.

Northumberland, NE county of Lower Canada, on the left side of St Lawrence river, extending from Hampshire indefinitely towards Labrador.

Northumberland, county of Upper Canada, W from Prince Edward and Hastings counties; and extending from lake Ontario to Rice lake.

Northumberland, post village, and township, of Saratoga county, New York, on the right side of Hudson river, 15 miles NE from Ballston Spa. Population 1810, 2041; and in 1820, 1279. Wilton was cut off from Northumberland since 1810.

Northumberland, county of Pennsylvania; bounded by Schuylkill, SE; Dauphin, S; Susquehanna river, or Union, W; Lycoming N; and Columbia NE. Length 35; mean width 13; and area 455 square miles. This is one of the mountain counties of Pennsylvania, and very much diversified in surface. Having so much river, it possesses, notwithstanding its general mountainous aspect, a large proportion of good, and considerable first-rate soil. Washed by the main Susquehanna, 20 miles below and by the W branch, 20 miles above Sunbury and Northumberland, produces a range of river soil of 40

miles in length. To this may be added 10 miles of the E branch, between Sunbury and Danville; the whole, including both banks of the latter section, yielding a river line of 60 miles. This alluvial range contains the mass of the population. Contrary to the ordinary course of the Appalachian ridges, the mountains of Northumberland extend nearly east and west. The principal ridges are, advancing from south to north, Line Mountain, Little Mahanoy, Mahanoy, and Shamokin, below the junction of the two great branches of Susquehanna: above their confluence, Montours Mountain, and the Limestone Ridge.

Beside the two fine rivers we have noticed, Northumberland is drained by some large creeks, the principal of which, are, Mahanango, Mahanoy, and Shamokin, entering Susquehanna, below Sunbury; and Chilisquaque, Limestone, and Warrior creeks, above Northumberland. Some of those creeks meander through narrow valleys, with much good soil.

The staple productions of Northumberland, are grain, flour, salted provisions, lumber, whi-key, and many other articles.

Its principal towns are, Sunbury, Northumberland, Milton, and Watsonburg.

Sunbury, a post town, borough and seat of Justice, stands on the left bank of Susquehanna river, immediately below the main fork, and above the mouth of Shamokin creek.

Northumberland, post town, stands on the point above, the junction of the two main branches of Susquehanna, and opposite to Sunbury.

Milton, post town and borough, is situated on the west branch of Susquehanna, 12 miles above Northumberland.

There are some other villages in the county, but undeserving particular notice. The two following tables exhibit the aggregate, and relative population of this county.

Norton, SE township of Medina county, Ohio. Population in 1820, 344.

Norton, or *Clipping Norton*, corporate town in Oxfordshire, with a market on Wednesday. Roman coins have been frequently found here. It is 12 miles SW of Banbury, and 74 NW of London. Lon. 1 17 W lat. 51 55 N.

Norton Sound, inlet of the sea, on the W coast of North America, discovered by Captain Cook in his last voyage. There is no good harbour in all the sound, nor even a tolerable station for ships. Lon. 162 47 W, lat. 64 55 N.

Norwalk, post town in Fairfield county, Connecticut, situated on Long Island Sound, 12 miles SW of Fairfield, and 50 NE of the city of New York. It contained 2983 inhabitants in 1810; and in 1820, 3004. It contains a news-paper printing office, an academy, and three churches.

Norwalk, post town and seat of justice, Huron county, Ohio, 14 miles from Lake Erie, and 100 NE from Columbus. Lon. W C 5 33 E, lat. 41 16 N. Population in 1820, 579.

Norway, kingdom in the N of Europe, the most westerly part of the ancient Scandinavia. It is bounded on the W and N by the Northern Ocean; E by Swedish Lapland and Sweden; and S by the Cate-gat; extending from the Naze in lat. 57 30, to the North Cape in lat. 71 10. Its

breadth, which is very unequal, is from 40 to 280 miles. It is naturally formed into two divisions, namely, Northern, and Southern, or proper Norway, separated from each other by the small Swedish province of Herndahl. It is divided into the governments of Aggerhuys, Christiana, or Christiansand, Berghen, Drontheim, and Finmark. The whole embracing an area of 161,000 square miles; and with an aggregate population of 930,000.

By the iniquitous and infamous treaty of Kiel, January 1814, Norway, against the free opinion of its people, was transferred from Denmark to Sweden. Denmark receiving in return, Swedish Pomerania, and the island of Rugen. From its rocky soil, and northern position, Norway is not populous in proportion to its extent. The inhabitants like the Swiss mountaineers, are exceedingly attached to their country. In Norway, they have a particular code, called the Norway Law, compiled by Grieffelfeld, at the command of Christian V. the great legislator of this country. By this law, the palladium of Norway, the peasants are free, except in some aristocratic estates near Frederickstadt; and the benefits of this code were visible in the great difference in their appearance, between the free peasants in Norway and the enslaved vassals of Denmark, though both were living under the same government. The inviolability of their laws, and the integrity of the kingdom were stipulated in the treaty of Kiel. The Norwegian peasants possess much spirit and fire in their manner; are frank, open, and undaunted, yet not insolent; never fawning, yet paying proper respect. Their principal mode of salute is by offering their hand; and when they are given or paid any trifle, the peasants, instead of returning thanks by words, or by a bow, shake hands with great frankness and cordiality. The same causes which affect the population of Norway, operate likewise on the state of tillage; for, although in some places vegetation is so quick, that the corn is sown and cut in six or seven weeks, yet the country does not produce sufficient corn for its own consumption. It is, however, exceedingly rich in pasture, and consequently produces much cattle. The horses are small, but strong, very active, and hardy. The fisheries, particularly on the W coast, find employment and wealth for the natives, and supplied the finest sailors for the Danish fleet. The principal fish are salmon, cod, ling, and whiting; their livers also yield train-oil; and the smallest are given as winter fodder to the cattle.—The extensive forests of oak and pine produce timber, spars, beams, and planks, beside charcoal, turpentine, bark, fuel, and even

manure; and the birch (the bark of which is used as a covering for the roofs of houses) not only supplies fuel, but also a kind of wine. The general exports are tallow, butter, salt, dried fish, timber, planks, horses, horned cattle, silver, cobalt, alum, Prussian blue, copper and iron. It abounds in lakes and rivers; the former so large that they appear like inlets of the sea; but the rivers are in general of a short course, except the Glommen. The mountains are numerous, and generally clothed with pines and firs; the grand Scandinavian chain, which runs from S to N, dividing this kingdom from Sweden, is known by distinct appellations; the chief are the ridges of Langfial, Dofrafial, Kolen, and Severnoi. The wild animals are the bear, lynx, wolf, fox, and hare; but the most singular creature is the lemming, or Norwegian mouse, of a reddish colour, and about five inches long. These animals proceed in vast numbers from the ridge of Kolen to the sea, devouring every product of the soil in their course, and at last seem to devour each other.

The inhabitants carry on a considerable trade with foreign nations. Their exports are copper, wrought and unwrought; iron cast into cannon, stoves, and pots, or forged into bars; masts, timber, deal-boards, planks, marble, mill-stones, herring, codling, flounders, cow-hides, goat-skins, seal-skins, the furs of bears, &c. down, feathers, butter, tallow, train-oil, tar, juniper and other sorts of berries and nuts. They have inexhaustible quarries of excellent marble, black, white, blue, grey and variegated. Gold has likewise been found in a small quantity, and a considerable silver mine is at present wrought at Koningsberg at the risk of his Danish majesty. These were visited by Mr. Coxe, who says that they formerly produced 70,000*l.*; but they now produce only 50,000*l.* The mines of cobalt and the preparation of Prussian blue is much more productive. It abounds in lakes and rivers; the former so large, that they appear like inlets of the sea.

Norwich, ancient and populous city, the capital of Norfolk, with a market on Wednesday, Friday, and Saturday. It is surrounded by a wall, now much decayed, and seated on the Yare, which runs through it, and is navigable to Yarmouth without locks. Though, as it has been said, it is a populous city, yet there is void enough in it for another colony; and, from the intermixture of its houses with trees, it is called a city in an orchard. Its manufactures are generally sent to London, though considerable quantities are exported from Yarmouth to Holland, Germany, Sweden, and Norway, &c. By a late calculation

from the number of looms at work in the city only, it appeared there were no less than 120,000 people employed in their manufactures of wool, silk, &c. in and about the town, including those employed in spinning the yarn used for such goods as are all made in this city. There is a stocking manufactory also here, which has been computed at 60,000*l.* a year. It is 43 miles N of Ipswich, and 109 NE of London. Lon 1 20 E, lat. 52 40 N. Population in 1811, 37,256.

Norwich, township of Upper Canada, in Oxford county, on the river Thames.

Norwich, post town and township, Windsor county, Vermont, opposite Hanover, on Connecticut river, 21 miles above Windsor. It is the seat of a military academy. Population 2000.

Norwich, township of Hampshire county, Massachusetts, 15 miles W from Northampton. Population in 1820, 849.

Norwich, city of New London county, Connecticut.

Norwich, township of Chenango county, New York, containing 2550 inhabitants in 1810; and in 1820, 3257. It lies about 100 miles W of Albany.

Norwich, township of Franklin county, Ohio, on Sciota river, eight miles above Columbus. Population in 1820 257.

Nossen, town of Germany, in the circle of Upper Saxony, situated on the Muldau, 18 miles W of Dresden. Lon. 13 0 E, lat. 51 2 N.

Notchengong, town of the Deccan in the province of Berar, 75 miles SSW of Ellichpore. Lon. 79 17 E, lat 20 32 N.

Notteburg, town of Russia, in the government of Petersburg, seated on an island in the lake Ladoga, at the place where the river Neva proceeds from this lake. It has a good citadel, and was capital of Ingria, before Petersburg was built. It is 25 miles E of Petersburg. Lon. 31 9 E, lat. 59 56 N.

Noto, ancient, large and handsome town of Sicily, and capital of Val-di-Noto. It was ruined by an earthquake in 1693, but another town was built at some distance from it, called Noto Nuovo. It is 22 miles SW of Syracuse. Lon. 15 19 E, lat. 36 50 N.

Notre Dame des Anges, signiory, Quebec county, Lower Canada, opposite Quebec.

Nottaway, river, rises in Prince Edward, Nottaway, and Lunenburg, counties Virginia, and flowing nearly E, between Dinwiddie, and Brunswick, and Greenville into Sussex; there turns to SE through Sussex and Southampton, joins Blackwater just within the limits of North Carolina. Entire comparative course 720 miles. Below the junction of the Nottaway and Black-

water, the united streams flows S about 16 miles, and uniting with the Meherin, forms the Chowan river.

Nottaway, county of Virginia; bounded by Dinwiddie SE; Brunswick S; Lunenburg SW; Prince Edward NW; and Amelia NE. Length 22; mean width 12; and area, 264 square miles. It is washed in all the SW borders by the Nottaway, and about half the county drained by the creeks of that river. Its NE moiety is drained by Flat creek, Deep creek, Winticomock, and others flowing into Appomattox river.

Nottingham, East and West, the two SW and contiguous townships of Chester county, Pennsylvania, containing together, 2051 inhabitants in 1810; and in 1820, 1950. They are situated on the E side of Octotara creek, and join the state of Maryland.

Nottingham, county town of Nottinghamshire, with a market on Wednesday and Saturday. It is situated on a rocky eminence, crowned by its castle; a magnificent modern structure, belonging to the duke of Newcastle, and built on the site of an ancient fortress, celebrated in English history. It is a populous and handsome town, distinguished by its spacious market-place,

and noted for its excellent ale. It is one of the principal seats of the stocking manufacture, particularly of the finer kinds, as those of silk and cotton, and has also a manufacture of coarse cartzen ware. It has three parish churches, and several meetings for the dissenters. It is remarkable for its vaults, or cellars, cut into the rock; and in the neighbourhood are many coal pits, which afford plenty of fuel, at little expense. Nottingham is governed by a mayor, sends two members to parliament, and is seated on a river which communicates with the Trent, one mile to the S. Novogorod, city of Russia, capital of a government of the same name, and formerly called Great Novogorod, to distinguish it from other towns of the same appellation. It was for a long time, governed by its own dukes; and was in fact, a republic, under the jurisdiction of a nominal sovereign. Its territory extended to the N as far as the frontiers of Livonia and Finland; composing great part of the province of Archangel, and a large district beyond the NW limits of Siberia. It was the great mart of trade between Russia and the hauseratic cities, and made the most rapid advances in opulence, and population. Its power

was so great, and its situation so impregnable, as to give rise to a proverb, Who can resist the gods and great Novogorod? But in the 15th century, this independent republic was obliged to submit to Ivan Basilowitz I. grand duke of Russia. It continued, nevertheless, the largest and most commercial city in Russia, and contained at least 400,000 souls. It was first desolated, in a manner, by the cruelties of Ivan Basilowitz II; but its splendour was not totally eclipsed until Peter the great built Petersburg, to which he transferred all the commerce of the Baltic that had before centered here. It now contains scarcely 7000 souls; and a vast number of churches and convents stand melancholy monuments of its former magnificence. The town stretches on both sides of the Volkoff, a river of considerable depth and rapidity, which separates it into two divisions; namely, the Trading Part and the quarter of St. Sophia; in the latter is a cathedral of the same name, in which several princes of the ducal family of Russia are interred. Novogorod is situate near the N end of the lake Ilmen, 125 miles SSE of Petersburg. Lon. 31 45 E, lat. 58 25 N.

Novogorod, Niznei, city of Russia, capital of a government of the same name, and an archbishop's see. Nuneaton, town in Warwickshire, with a market on Saturday, and a manufacture of woollen cloth. It was formerly noted for its nunnery, and is seated on the river Anker, eight miles N by E of Coventry, and 99 NNW of London. Lon. 1 25 W, lat. 52 36 N.

Nuneham, village, five miles E by S of Oxford; remarkable for its Spinning Feast, an annual festival, instituted by lord and lady Harcourt, for the encouragement of virtue and industry.

Nunty, village in Somersetshire, two miles SW of Frome, with a fair in November. It is remarkable for an old castle taken by the parliament's forces in 1645, the shell of which is still entire, and a fine piece of antiquity.

Nuremberg, or *Nürnberg*, free imperial city of Germany, capital of the circle of Franconia, with a university. It is six miles in circumference, surrounded by high walls, flanked with 365 towers; and the river Pegnitz, over which are 12 stone bridges, runs through the middle, and divides it into two parts. The government is aristocratical; and the townsmen are divided into eight quarters, each of which has a captain. The burgesses are very industrious, and the best workmen in arts; their maps and prints are in high esteem, as well as their musical and mathematical instruments; nor are they less curious in clock work, and in the several manufactures of iron, steel, ivory, wood, and alabaster. The best toys are made here, which are commonly known in England by the name of Dutch toys. Here is a famous academy for painting, an anatomical theatre, and a public library. The ancient and superb castle or palace, which the inhabitants bought of the burgaves, is still standing at the extremity of the city; and the arsenal is one of the best in Germany. The houses are built of free-stone, and are four or five stories high. No Jews are suffered to lodge a single night here; nor can they enter the city at all without paying a certain tax. *Nuremberg*, in process of time, has obtained a considerable territory, 100 miles in circumference, in which are two large forests. It is 55 miles NW of Ratishon,

62 N of Augsburg, and 250 W by N of Vienna. Lon. 11 12 E, lat. 49 27 N.

Oaxaca, intendency of Mexico, bounded by the Atlantic Ocean S; the intendency of Puebla W and NW; Vera Cruz N and NE; and Guatemala E. Length from E to W 240; mean width 180; and area about 34,000 square miles. Between lat. 15 40, and 18° N.

This intendency is one of the most delightful countries on this part of the globe. The beauty and salubrity of the climate, the fertility of the soil, and the richness and variety of its productions, all combine to minister to the prosperity of its inhabitants; therefore, this province has accordingly from the remotest periods, been the centre of an advanced civilization. In Puebla, Mexico, and Valladolid, the substrata are composed of basaltes, amygdaloid, and porphyry; but in the Mixtecan and Zapotecan ranges of Oaxaca, granite and kneiss are the prevailing rocks. The mountain summits of Oaxaca have not been scientifically determined, but from the circumstance, that from some of the peaks, the Gulf of Mexico and Pacific Ocean are visible, the elevation must exceed 7000 feet.

The surface of this region though mountainous, may be considered in general as an inclined plane, sloping from

7000 feet to the level of the Pacific Ocean. Some very remarkable Aztec ruins are found in Oaxaca. See *Pyramids, American*.

The list of vegetable productions of Oaxaca, are commensurate with nearly all plants cultivated by civilized man in the temperate zones, and tropical regions. Its principal rivers are, the Chimalapa, falling into the Gulf of Tehuantepec, and the Chicometepepec entering the Pacific Ocean, in the SW part of the intendancy.

Its most productive mines are, those of Villalta, Zolaga, Yxtepechi, and Tomostla.

The cities of Oaxaca, are Oaxaca, San Antonio de los Cues, and Tehuantepec.

The family of Hernando Cortez, are styled Marquises of the valley of Oaxaca. Their property is composed of the four villas del Marquesado, and 49 villages, which contain 18,000 inhabitants.

Oaxaca, city of Mexico, and capital of the intendancy, by the same name stands on one of the confluent of the Chicometepepec rivers, 240 miles SSE from the city of Mexico. Lon. Oeland, island of Sweden, in the Baltic, separated from the coast of Gothland, by a strait 12 miles broad in the narrowest part. It is 80 miles long, but not more than nine broad. The N part has fine forests, quarries of excellent freestone; but the S part is more level; and very fertile. Both parts abound in alum mines. Borkholm is the chief town, seated on the strait, 22 miles ENE of Calmar. Lon. 16 50 E, lat. 56 48 N.

Oelfelt, town of Lower Saxony, in the duchy of Magdeburg, on the Aller, 25 miles E of Brunswick. Lon. 11 20 E, lat. 52 27 N.

Oels, town of Silesia, capital of a principality of the same name.

Oels, principality of Silesia, forming part of the government of Breslau.

Oelsnitz, town of Upper Saxony in the territory of Voigtland, seated on the Elster. Lon. 12 10 E, lat. 50 19 N.

Oesel, island of the Baltic, on the coast of Livonia, at the entrance of the Gulf of Riga. It is 74 miles long and 50 broad and defended by two forts. It formerly belonged to Denmark, but now to Russia. Its capital is Arensburg.

Oeting, town of Upper Bavaria. It is divided into the Upper and Lower Town, and is seated on the Inn, eight miles NW of Burkhhausen. Lon. 12 44 E, lat. 48 14 N.

Oeting, or *Oetingen*, town of Suabia, capital of a county of the same name. It is seated on the river Wurnitz, 12 miles NNW of Donawert, and 35 WNW of Ingolstadt. Lon. 10 40 E, lat. 48 58 N.

Offa's Dike, entrenchment cast up by Offa, a Saxon king, to defend England against the incursions of the Welsh. It runs through Herefordshire, Shropshire, Montgomeryshire, Denbighshire, and Flintshire.

Offanto, river of the kingdom of Naples, which rises in the Appennines; passes by Conza and Monte Verde; separates Capitanza from Basilicata and Terra-di-Bari; and falls into the gulf of Venice, near Barletta. It is the ancient Aufidius.

Offenbach, town of Germany, in the circle of Franconia, on the Maine, five miles E of Francfort. Lon. 8 45 E, lat. 49 54 N.

Offenburg, town of Suabia, on the Kintzig, 12 miles SE of Strasburg, and 28 S of Baden. Lon. 8 1 E, lat. 48 31 N.

Offida, town of Italy, in the marquisate of Ancona, 26 miles S of Loreto. Lon. 13 46 E, lat. 42 53 N.

Offutt's, post office, Hampshire county, Virginia.

Ogden, township of Genesee county, New York. Population 1820, 1435.

Ogdensburg, post town, and seat of justice, St. Lawrence county, New York, on St. Lawrence river, on the point below the mouth of Oswegatche. The site of this

town is high, bold, and pleasing; and the mouth of the Oswegatche affords an excellent harbour. It is the lowest point of ship navigation, on St. Lawrence from lake Ontario. The Gallop rapids commence about five miles below. It is the seat of some mills, and manufactures; and stands opposite to Prescott, in Upper Canada, 65 miles by land NE from Sackett's Harbour, and about 120 miles above Montreal. Population about 300.

Ogeechee, river of Georgia, rising in Greene county, and flowing SE, between the confluent of the Alatomaha, and Savannah rivers, falls into the Atlantic Ocean by Ossabow Sound, 20 miles S from Savannah. It passes by Georgetown in Warren, and Louisville in Jefferson county.

Oginski canal, between the governments of Bielsk, and Minsk, in Russian Poland. It commences in the Iasiolda, which falls into the Prypiez, and thence into the Dnieper, and terminates near Slonim, in the Schara, a branch of the Niemen. It was made navigable in 1784, and completed in 1802. By this canal, and by the Dnieper, and Niemen, a water communication is open between the Baltic and Black seas.

Oglethorpe, county, Georgia; bounded by Washington E; Greene S; Clark W; Madison NW; and Broad river, or Elbert NE. Length 22; mean width 20; and area 440 square miles. It lies between Oconee and Broad river and is drained by their confluent's. The surface moderately lully, and soil productive. Staples, cotton, grain, &c. Chief town, Lexington.

----------------------	-----

Area 40,000 = 25,600,000 acres. N latitude 38 29 41 59.

The longest line in the State of Ohio, north-east and south-west, is 300 miles. Its width between Pensacola and Indiana 227 miles.

Though not marked by any of those bold and sublime features which are peculiar only to mountainous countries, Ohio presents some very remarkable traits, which call forth the utmost attention of the statist and philosopher.

For the general features of Ohio. See article Mississippi basin, section Ohio river.

When it is known that the vale in

which the Ohio flows is from 300 to 400 feet below the common level of the adjacent country, and when it is also known, that an immense table land extends through the state in nearly a north-east, and south-west direction, the origin of the phenomena, which serve to form its physiognomy, is easily traced. The rugged appearance of the Ohio banks in all their extent give an idea of unevenness to the state, which an examination of its interior must correct.

Like all other sections of the United States, Ohio cannot be designated by any general character; and similar to every newly settled part of our country, from the attention of early emigrants being naturally turned towards the best soil, the river alluvion and rich prairie margins have contributed to give too high colouring to descriptions of its lands.

As far as a general view can be adopted, the following may exhibit the great outlines of the state.

Fifty or sixty miles from the Ohio river hilly, and in part very rugged; formed by abrasion of water.

The region in the rear of the hilly is not level, though not rising into hills of any considerable elevation; it is rolling land, and presents features in exact accordance with what must rise from the theory we have adopted. The country becoming more level approaching the interior land; until finally smoothing into the elevated plain from which the rivers flow into Lake Erie, or into Ohio river.

The third variety is that of the plains, or table land. This natural section contains very various species of soil, from rich river alluvion and prairie to sterile oak barrens and marshes: the latter to considerable extent.

Another remarkable natural section of Ohio lies along Lake Erie. The slope of the country rises gradually from Ohio river towards the sources of Muskingum, and Cuyahoga. On the latter, a sudden and much more inclined depression falls towards the lake. This dividing line, for ridge it cannot be called, does not conform to the bearings of Erie. At the north-east angle of the state its apex is within three miles, whilst towards the sources of Maumee, it has receded above 100 miles from the lake.

A series of falls interrupts every river of Ohio, flowing into Erie. Those which flow into Ohio river, except Muskingum, though all are rapid in their descent, none have falls. The small cataract at Muskingum, at Zanesville, is the last water-fall in any stream of magnitude worthy notice, on the north-western slope of the Ohio basin. It may not be irrele-

vant to remark, that on all the vast extent west from Zanesville to the sources of the Plate and Kansas rivers, and north-west to the sources of Yellow Stone and Missouri rivers, no cataract worthy notice has been discovered. Below the Great Kenhawa, on the south-eastern slope, their occurrence is equally rare. The rapids of Ohio and Muscle shoals, in Tennessee, are only approaches to falls, and both are merely strong rapids, the latter only obstructing upstream, both admitting down-stream navigation. Indeed exemption from impediments to commercial intercourse may be constantly kept in view, as one of the most felicitous features of the whole Mississippi basin. An exemption found to an equal extent no where else on the globe, except in the basins of the Plate, Amazon, and Orinoco rivers, in South America.

It would be a very interesting solution to determine the relative extent of the various natural sections of Ohio. Such an estimate would be so vague, upon the uncertain data we possess, that no satisfactory result can be obtained. It may be observed that the three sections, hilly, rolling, and level, are nearly of equal extent, or about 13,300 square miles each; and that the whole state is, though unequally so, habitable. The result of the settlement of this state proves its general productiveness.

I have been myself over a large part of the southern and northern frontiers of Ohio, and have every where found the soil favourable to the purpose of agriculture. No part of what is called barrens, or swamp in Ohio, are so irreclaimable as the sandy shores of the Carolinas and Florida, the sea marshes of Louisiana and Texas; or so unproductive as the interminable pine tracts which reach from the Roanoke to Red river.

In point of position, its local is in many respects favourable; but its advantages are more appropriate to an interior than exterior communication. The quantity of its arable soil will, no doubt, combined as it is by many moral causes, superinduce a very dense population in Ohio; circumstances, however, common to all will produce in Ohio, Indiana, Illinois, and Michigan, a mass of population by far exceeding that of any other equal continuous extent in the United States.

The most common mineral productions of Ohio are, coal and iron. Coal is found along the Ohio and Muskingum rivers, and iron ore in various parts of the state. Water impregnated with muriate of soda, common salt, has been found, but not in any quantity to render the manu-

facture of salt an object of any considerable value.

The staples of this state are numerous and important, consisting of wheat, rye, oats, Indian corn, whiskey, apples, cider, live stock, and salted provisions. The most frequented commercial outlets are, by the Ohio, and Mississippi river, to New Orleans; by lake Erie and Detroit river, to Detroit; by lakes Erie and Ontario, and St. Lawrence river to Montreal; and by land, to Pittsburg, New York, Philadelphia, and Baltimore.

The seat of government is at Columbus, but by far the largest town in the state, is the city of Cincinnati, containing, at present, above 10,000 inhabitants. Steubenville, Zanesville, Cleveland, and several others, are flourishing places, containing a population of from 500 to 3000.

The civil and political subdivisions of Ohio are the following, with the result of the census of 1820 annexed.

Ohio is calculated by Mr. Kilbourn, in his Gazetteer, to contain 40,000 square miles. That calculation is, no doubt, nearly correct: therefore, allowing for surface, irreclaimable swamps, and other uncultivated tracts, the aggregate of the counties will approach very closely to the real arable land of Ohio.

The counties of Crawford, Hancock, Harden, Henry, Marion, Paulding, Putnam, Seneca, Vanwert, and Williams, have been formed subsequent to the last census, and, being mostly in the new purchase, remain in great part uninhabited. These counties, taken together, amount to 5427 square miles. The aggregate of the census of 1820 was but little influenced in its amount by the few inhabitants then upon this surface; an area approaching one-seventh part of the superficies of the state. Deducting 5427 square miles from 38,260, leaves 32,833, as the really inhabited surface of Ohio. The latter area has, therefore, at present, if we make but a moderate allowance for the augmentation since the census was closed, upwards of eighteen to the square mile. The uninhabited, or thinly peopled counties, more than equal, in point of fertility of soil, the general aggregate surface of the state, and will consequently admit, at least, an equal density of population, or

permit the addition of nearly 100,000 inhabitants to the state.

The progressive population of Ohio is an unmatched phenomenon in the history of colonization. In 1783, the ground now embraced within its limits, was one wide waste. In 1790, 3000 civilized inhabitants were only found on its surface. In 1800, they had increased to 42,156. In 1810, the census presented an abstract containing 227,843. In 1820, the state possessed 581,434 inhabitants. It demands a very limited knowledge of the relation of Ohio, its admirable position, its exuberant soil, and above all, the effects which must ensue from opening the western canal of New York, to foresee an augmentation of people on Ohio more rapid in the next ten years than in any equal antecedent period.

Ohio, in 1820, contained 576,572 white inhabitants, and 4723 free coloured persons. In point of classification, the inhabitants were composed of:

Foreigners not naturalized	-	3495
Engaged in agriculture	-	110,921

Do in commerce	-	1,459

Ohio became a state of the United States in 1803.

Ohio, river of the United States, the great NE branch of Mississippi. See Mississippi, section Ohio.

Ohio, southern township of Gallia county Ohio. Population 1820, 483.

Ohio, SW township of Clermont county, Ohio. Population 1820, 2791.

Ohio'syle falls, in Youghiogheny river. They are in Fayette county, 11 or 12 miles NE from Uniontown.

Oil creek, creek of Pennsylvania, rising in the NE part of Crawford, and SW of Warren county, flows S, and falls into the Alleghany river, 10 miles above Franklin. On it is a remarkable spring, on the waters of which, a mineral oil is found to float.

Oil creek, SE township of Crawford county, Pennsylvania. Population 1820, 495.

Oil spring, post office, Catharaugus county, New York.

Oisans, town of France in the department of Isere and late province of Dauphiny, 28 miles SE of Grenoble. Beauvais is the capital. Lon. 6 25 E, lat. 45 0 N.

Oise, department of France, including part of the late province of the Isle of France.

Oise, river which has its source in the Ardennes, and falls into the Seine, near Pontoise. It gives name to the above department.

Oka, river of European Russia great

SW branch of the Volga. It rises in the governments of Smolensk, Kalouga, and Orel, flows NE by E and falls into the Volga at Nishnei-Novogorod, after a comparative course of 600 miles. It passes by Orel, Kalonga, Kolomna, Riazane, Spask, Kassinov, and Murom. Mosqua, on which stands Moscow, is one of its northern branches. It is one of the best navigable secondary rivers in Europe, being passable with boats to Orel near its source.

Ok-lock-one, river of the United States, rises in Georgia, and flowing SSW falls into St. George's Sound 40 miles E from the mouth of the Appalachicola river.

Okeham. See *Oakhham*.

Okingham, or *Wokingham*, town in Berkshire, with a market on Tuesday, eight miles SE of Reading, and 32 W of London. Lon. 0 59 W, lat. 51 25 N.

Okotzk, province of the government of Irkutsk, in Russia. Its capital, of the same name, is seated at the mouth of the Okota, in a bay of the Eastern Ocean.

Oldenburg, town of Westphalia, capital of a country of the same name. The church of St. Lambert contains the tombs of the last counts of Oldenburg, which are very curious. It is noted for its horses; and is seated on the Hunte, 22 miles W of Bremen, and 45 SE of Embdem. Lon. 8 8 E, lat. 53 7 N.

Oldenburg, Grand duchy of NW Germany; consisting of, Oldenburg, Delmenhorst, Vassel, Jever, and Knipphausen, 2250 square miles, and 180,000 inhabitants; principality of Eutin or Lubec; 200 square miles, and 20,000 inhabitants; and Birkenfeld 170 square miles, and 20,000 inhabitants. Oldenburg was created a grand duchy, and its duke received into the Germanic confederation, 1815.

Oldenburg, town of Lower Saxony, in the duchy of Holstein, seated near the Baltic, 30 miles N of Lubec. Lon. 10 47 E, lat. 54 22 N.

Oldendorf, town of Lower Saxony, in the duchy of Lunenburg, seated on the Wenaw and Esca. Lon. 10 35 E, lat. 53 16 N.

Oldendorf, town of Westphalia, in the territory of Schawenburg, seated on the Weser, 28 miles SW of Hanover. Lon. 9 31 E, lat. 52 16 N.

Olderlo, town of Lower Saxony, in the duchy of Holstein, seated on the Trave, 17 miles W of Lubec, and 25 NE of Hamburg. Lon. 10 18 E, lat. 53 52 N.

Old Lamville, town of Rockcastle county, Kentucky, on Rockcastle river.

Old head of Kinsale, cape on the south coast of Ireland, about six miles S from Kinsale. It is a high rocky promontory;

which has been recently rendered distressfully remarkable by the wreck of the *Albion*, 1822.

Oldman's creek, small stream of New Jersey, separating Salem and Gloucester counties, and falling into the Delaware about three miles below Marcus Hook.

Old Town, or *Indian Old Town*, island in Penobscot river, Penobscot county Maine. It is an Indian settlement, containing about 200 acres; and 300 persons.

Old Town, post town in Allegany county, Maryland; situated on the N side of Potomac river, near the mouth of the SW branch, 14 miles SE of Cumberland, and 134 NW of Washington.

Olean, township of Cattaraugus county, New York, on Allegany river, at the mouth of Olean creek, containing Hamilton, which see. Population in 1820, 1047.

Olean, creek, of Cattaraugus county, New York, flows S, and falls into Allegany river at Hamilton.

Oleron, isle of France, five miles from the coasts of Aunis and Saintonge. It is 12 miles long and five broad; is populous and fertile, producing corn and wine, and is defended by a castle. It contains about 10 or 12,000 inhabitants, and on a headland is a light-house, and on its E side stands a strong castle. In the reign of Richard I. this island was part of the possession of the crown of England; and here that monarch compiled the code of maritime laws, called the Laws of Oleron, which are received by all nations in Europe, as the ground of all their marine constitutions. Lon. 1 20 W, lat. 46 3 N.

Oleron, town of France, in the department of Lower Pyrenees and late province of Bearn, with a bishop's see. It is seated on the Gave, 10 miles SW of Pau. Lon. 0 14 W, lat. 43 7 N.

Olesko, town of Poland, in Red Russia, 36 miles ENE of Lemburg. Lon. 25 10 E, lat. 50 23 N.

Oley, township of Berks county, Pennsylvania, containing 1284 inhabitants in 1810, and in 1820, 1400. It is situated eight miles E of Reading and 12 NW of Pottsgrove; and is watered by Mannatawny creek.

Olika, town of Poland in Vollandia, with a citadel, 20 miles E of Lucko. Lon. 26 8 E, lat. 51 15 N.

Olinda, town of Brasil, seated on the Atlantic with a very good harbour. It was taken by the Dutch in 1630, but the Portuguese have since retaken it. Lon. 35 0 W, lat. 8 13 S.

Olita, town of Spain, in Navarre, where their kings formerly resided. It is seated in a fertile country, 20 miles N of Tudela. Lon. 1 46 W, lat. 42 22 N.

Ontanagon, river of the territory of Michigan, rising with the Onisconsin, and Black river branches of the Mississippi. It flows N, and falls into the lake Superior, about 90 miles SW from Point Keeweenaw. A large mass of native copper, has been found imbedded in a rock near the bank of this stream; estimated recently, from actual inspection by Mr. H. Schoolcraft at 2200 pounds.

Ontario Lake, one of that grand chain of lakes which divide the United States from Upper Canada. It is situated between lat. 43 15 and 44 0 N, and lon. 76 0 and 79 0 W. Its form is nearly elliptical; its greatest length is from SW to NE, and its circumference about 600 miles. The division

line between the state of New York and Canada, on the north passes through this lake, and leaves within the United States, 2,390,000 acres of the water of lake Ontario, according to the calculation of Mr. Hutchins. It abounds with fish of an excellent flavour, among which are the Oswego bass, weighing three or four pounds. Its banks in many places are steep, and the southern shore is covered principally with beech trees, and the lands appear good. It communicates with lake Erie by the river Niagara. It receives the waters of Genesee river from the south; and of Onondago, at Fort Oswego, from the south-east, by which it communicates, through Oneida Lake and Wood Creek, with the Mohawk River. On the north-east this lake discharges itself into the river Cataragui, which at Montreal takes the name of St. Lawrence, which empties into the Atlantic ocean. The islands are all at the eastern end, the chief of which, are Wolfe, Amherst, Gage, and Howe Islands.

Ontario, county in Upper Canada, consists of the following islands; Amherst Island, Wolfe Island, Gage Island, and all the islands between the mouth of the Gananoqui, to the easternmost extremity of the late township of Marysburg, called Point Pleasant.

Ontario, county of New York; bounded by lake Ontario, N; Seneca county E; Seneca lake SE; Steuben S; and Livingston and Monroe W. Length 50; mean width 24; and area 1200 square miles. Soil fertile. It is in great part drained by the sources of Seneca river, and contains all Canandaigua, and some smaller lakes with part of Crooked lake; and is bounded by Seneca lake on the SE. Though generally hilly, some extensive flats exist in this county, near lake Ontario, and in the valley of the Seneca river. The grand Erie canal crosses its northern section following the valley of Seneca. In the census of 1820 this county contained all those parts of Livingston and Monroe; E from Genesee river, and then contained about 1750 square miles; and upon the latter area the annexed tabular aggregate is founded. Chief towns, Canandaigua, Geneva, and Lyons.

Opelousas, county of Louisiana; bounded by the gulf of Mexico SW; Sabine river, or the province of Texas W; the parishes of Natchitoches, and Rapides N; parish of Arroyells and Atchafalaya river NE; and Attacapas SE. Length 110 miles; mean width 70; and area 7700 square miles. All the southern, south-eastern, and eastern part of Opelousas is one vast plain. The north-west and northern sections, swells into hills of moderate size. In point of soil, it is divisible into three distinct regions. Towards the gulf of Mexico it is marshy, but rising gradually into arable prairies with a thin sterile soil. This character of country is followed, advancing north, by an immense pine forest, out of which flow numerous creeks falling into Sabine; the Calcasieu river, and the Nezapique river, or north-western branch of Merimentau. The soil of the pine tract is

also sterile. Advancing to the eastern part of the county watered by the Teche, Boeuf, and Courtableau, a total change takes place, the soil is exuberantly productive, and in part excessively heavy timbered. The northern and eastern parts of Opelousas are covered by a dense forest; the residue open prairies. It is emphatically the pastoral section of Louisiana, and contains the most numerous individual flocks of cattle in the United States. Farming is, however, extensively pursued in the eastern part of the county. Staples, cotton, beef, tallow, hides, live stock, such as horses, mules, horned cattle, and some sheep. It is watered by the Sabine, Calcasieu, and Upper Teche, flowing into the gulf of Mexico. A low uninhabitable, and annually overflowed tract, indeed extends from the arable border of the Teche to the Atchafalaya. See *Courtableau, Louisiana, Mississippi*, &c. For the ordinary municipal regulations of that part of Louisiana, it is designated the parish of St. Landré.

Orinoco, river of the first rank in South America. It rises in the mountains of Guiana, and flows, about 300 miles to the S; it thence turns W 150 miles, and receives the Cassiquari from the SW. The latter communicates with the Rio Negro, branch of the Amzon. Below the mouth of the Cassiquari, the Orinoco, turns to NW to St. Fernando, where it unites with Guaviari, an immense stream, little if any inferior to the Orinoco. The united streams assume a N course to the mouth of the Vichada, another large western tributary. Immediately below its junction with the Vichada, the Orinoco, pours its waters down the cataract of Atures 760 miles below its source, and 740 above its discharge into the Atlantic Ocean. The cataracts are in lon. W C 8 55 E, and lat. 5 15 N. About 100 miles below the cataracts the volume of the Orinoco is enlarged by the Meta, a large river flowing from the Andes 500 by comparative courses. Below its junction with the Meta 150 miles, the Orinoco, is again swelled by the Apure, a very considerable branch flowing from the NW, and W about 500 miles, and drawing its sources from the mountains of Varinas, and Venezuela. From the cataracts, the Orinoco gradually turns more to the E, and below the discharge of the Apure, assumes a course a little N of E, and falls into the Atlantic Ocean by a wide delta, between 14° and 17° E from Washington, and from lat. 8 30 to 10° N. The entire comparative course of the Orinoco is about 1500 miles; and the area of the basin it drains 400,000 square miles. About 100 miles above its mouth it receives the Paraguay, or Oarom, the only large tributary which augments its volume from the S. See *Oarom*, and *Paraguay*, of *Orinoco*.

Only the S, or main channel of Orinoco is navigable for large vessels. For boats few rivers of the world afford a more extended and less interrupted navigation. The entire basin of this great river is in the republic of Colombia.

In Orissa, the district of Midnapour only, is subject to the English; the rest being entirely in the hands of the Mahrattas, and their tributaries.

Oristagni, ancient town of Sardinia, with a good harbour, and an archbishop's see.

It is large, and well fortified, but thinly inhabited, on account of the unhealthy air. It is seated on the W coast, on a bay of the same name, 42 miles NW of Cagliari. Lon. 8 51 E, lat. 40 2 N.

Orzaba, volcanic mountain of Mexico, rising 17,371 feet above the level of the gulf of Mexico. Lon. W C 20 13 W, lat. 19 2 N. It is in the intendency of Vera Cruz, and distant about 70 miles from the city of Vera Cruz. This colossal peak is the land mark first seen when approaching that part of the Mexican coast from the gulf of Mexico. It is the Citlaltepē of the Aztecs.

Orkened, town of Schonen, in Sweden, 24 miles N of Christianstadt. Lon. 14 9 E, lat. 56 48 N.

Orkeney Islands, or *Orkneys*, ancient Orkades, a cluster of islands to the N of Scotland, from which they are separated by Pentland Frith. They lie between 57 35 and 49 16 N lat. and are 26 in number, of which one greatly exceeds the other in extent. This, like the principal one of *Shetland*, is sometimes dignified with the appellation of Mainland, but is more frequently called *Pomona*. Beyond this island, to the NE are seen, among others, *Rowssa*, *Eglissha*, and *Westra*, *Shappinsha*, and *Eda*, *Stronsa*, *Sanda*, and *N. Ronaldsha*; and to the S appear *Hoy*, and *S Ronaldsha*, with others of inferior note. The currents and tides which flow between these islands are rapid and dangerous; and near the small isle of *Swinna* are two whirlpools, very dangerous to mariners especially in calms. Springs of pure water are found in all the mountainous parts of these islands; and there are numerous lakes and rivulets abounding in fish. The climate of these islands in summer is moist and cold; but in winter there is never much snow, and that lies only a short time. Preceding the autumnal equinox, they are visited by dreadful storms of wind, rain, and thunder. The coast afford numerous bays and harbours for the fisheries. The chief exports are linen and woollen yarn, stockings, butter, dried fish, herrings, oil, feathers, and skins of various kinds, and kelp. The English language prevails in all these islands, although there are many words in the Norse, or Norwegian, still in use. The inhabitants have the general character of being frugal, sagacious, circumspect, religious, and hospitable.

Orleans, city of France, capital of the department of Loiret, and a bishop's see. It is seated on the Loire, and has a canal thence to the Loing, near Montargis. Under the sons of Clovis, it was the capital of a kingdom. In 1428, it stood a memorable siege against the English, which was raised by the celebrated Joan of Arc, called the Maid of Orleans. It is now considered as one of the largest and most pleasant cities in France; and its commerce consists in stockings, sheep-skins, wine, brandy, corn, groceries, and particularly sugar, which is brought raw from Nantes and Rochelle. The fauxbourg of Paris is of a prodigious length, and that of Olivet, on the left side of the Loire, has a communication with the city by a bridge of nine arches. Near the city is a forest, containing 94,000 acres, planted with oak and other valuable trees. Orleans is 30 miles NE of Blois, and 60 SSW of Paris. Lon. 1 54 E, lat. 47 54 N.

Owen's, tavern, post office, Middlesex county, Virginia.

Owenton, post town and seat of justice, Owen county, Kentucky, on a branch of Eagle creek, 20 miles NNE from Frankfort.

Owyhee, largest and most eastern of the Sandwich islands, in the Pacific Ocean. Its length from N to S is 84 miles, and its breadth 70. It is divided into six districts, two of which, on the NE side, are separated by a mountain, that rises in three peaks, perpetually covered with snow, and may be seen at 40 leagues distance. To the N of this mountain, the coast consists of high and abrupt cliffs, down which fall many beautiful cascades; and the whole country is covered with cocoa-nut and bread-fruit trees. The peaks of this mountain on the NE side appear to be about half a mile high. To the S of this mountain, the ground is covered with cinders, and in many places has black streaks, which seem to mark the course of a lava, that has flowed from the mountain to the shore. The southern promontory looks like the mere dregs of a volcano. The projecting headland is composed of broken and craggy rocks piled irregularly on one another, and terminating in sharp points; yet, amid these ruins, are many patches of rich soil, carefully laid out in plantations. The fields are enclosed by stone fences, and are interspersed with groves of cocoa-nut trees. Here captain Cook, in 1779, fell a victim to the sudden resentment of the natives, with whom he unfortunately had a dispute. Lon. 156 0 W, lat. 19 28 N

Oxford, capital of Oxfordshire, and a bishop's see. It is seated at the conflux of the Cherwell with the Thames, and has a canal to Brunston, in Northamptonshire. The city, with the suburbs, is of a circular form, three miles in circumference, and was anciently surrounded by walls, of which considerable remains are yet to be seen; as also of its extensive castle, the tower of which now serves for a country jail. In 1811, the number of inhabitants was 12,931. It has,

beside the cathedral, 13 parish-churches, a famous university, a noble market place, and a magnificent bridge. The university is generally supposed to have been a seminary for learning before the time of Alfred, although it owed its revival and consequence to his liberal patronage. Here are 20 colleges, and five halls, several of which, stand in the streets, and give the city an air of magnificence. The colleges are provided with sufficient revenues for the maintenance of a master, fellow, and students. In the halls the students live, either wholly, or in part at their own expense. The colleges are, University, Baliol, Merton, Exeter, Oriel, Queen's, New, Lincoln, All Souls, Magdalen, Brazen Nose, Corpus Christi, Christ Church, Trinity, St. John Baptist's, Jesus, Wadham, Pembroke, Worcester, and Hertford. Of these the most ancient is University College, founded before the year 872; and to Christ Church College, begun by cardinal Wolsey, and finished by Henry VIII. belongs the cathedral. The halls are Alban, Edmund, St. Mary's, New Inn, and St. Mary Magdalene. Among the libraries in the university, the most distinguished is the Bodleian, founded by Sir Thomas Bodley; those of All Souls College, Christ Church, Queen's, New, St. John's, Exeter, and Corpus Christi. Among other public buildings are the Ashmolean Museum, the Clarendon Printing-house, Radcliff Infirmary, and an Observatory. Magdalen Bridge, besides the beauty of its architecture, has this singularity that more than half of it is on dry ground, and the rest covers two small stripes of the Cherwell; this bridge is 526 feet long. The Theatre, more magnificent of any thing of the kind in the world. The physic-garden of above five acres, walled round with fine gates one of which cost 600*l*.

Oxfordshire, county of England, bounded on the E by Buckinghamshire, W by Gloucestershire, S by Berkshire, and N by Warwickshire and Northamptonshire. The extreme length is 48 miles, and breadth 26, but its form is very irregular. It contains 450,000 acres; is divided into 14 hundreds, and 207 parishes; has one city and 12 market towns; and sends nine members to parliament. The soil, though various, is fertile in corn and grass. The S part, especially on the borders of Buckinghamshire, is hilly and woody, having a continuation of Chiltern hills running through it. The NW part is also elevated and stony. The middle is, in general, a rich country, watered by numerous streams running from N to S, and terminating in the Thames.

Of these, the most considerable are the Windrush, Evenlode, Cherwell, and Thames; the latter, although an inconsiderable rivulet, has obtained some importance from having been supposed to give name to the Thames. The products of Oxfordshire are chiefly those common to the midland farming counties. Its hills yield ochre, pipe-clay, and other earths, useful for various purposes. Corn and malt are conveyed from it, by the Thames, to the metropolis. Population 1801, 109,620, in 1811, 119,191, and in 1821, 134,327.

Pachsu, small island in the Mediterranean, near the coast of Epirus, S of Corfu, and W of the gulf of Arta. It is subject to Venice.

Pacific Ocean, that vast ocean which se-

parates Asia from America. It is called Pacific, from the moderate weather the first mariners who sailed in it met with between the tropics; and it was called South Sea, because the Spaniards crossed the isthmus of Darien from N to S when they first discovered it; though it is properly the Western Ocean with regard to America. Geographers call the South Sea *Mare Pacificum*, "The Pacific Ocean," as being less infested with storms than the Atlantic; but M. Frezier affirms it does not deserve that appellation, and that he has seen as violent storms therein as in any other sea: but Magellan happened to have a very favourable wind, and not meeting with any thing to ruffle him when he first traversed this vast ocean in 1520, gave it the name which it has retained ever since. Maty, however, adds, that the wind is so regular there, that the vessels would frequently go from Acapulco to the Philippine

islands without shifting a sail. All the preceding characters of the Pacific Ocean are correct when applied to different parts of that immense basin. Within and for some distance above the tropics, it is truly Pacific, whilst in high latitudes, and particularly near land, it is liable to all the meteorological changes arising from difference of temperature.

Packersfield, now *Nelson*, township of Cheshire county, New Hampshire, containing 1076 inhabitants in 1810, and in 1820, 907. Situated on the head branches of the Ashuelot river, about 20 miles E of Connecticut river.

Palermo, fortified city of Sicily, in Val di Mazara, capital of the island, and an archbishop's see. It stands on a bay of the same name, on the N coast, near the extremity of a kind of natural amphitheatre, formed by high and rocky mountains. The country between the city and the mountains is one of the richest plains in the world; the whole appearing a magnificent garden, filled with fruitful trees, and watered by fountains and rivulets. The inhabitants of Palermo are estimated at 130,000. Two great streets intersect each other in the centre of the city, where they form a handsome square, called the *Ottogolo*, from the centre of which is seen the whole of these noble streets, and the four elegant gates which terminate them, each at the distance of half a mile. The *Porto Felice* opens to the Marino, a delightful walk, which has on one side the wall of the city, and on the other the sea; and in the centre is an elegant kind of temple, frequently made use of as an orchestra. The churches of Palermo are upwards of 300, and many of them very rich and magnificent. This city has suffered greatly at different periods, by earthquakes or inundations. The harbour, defended by two castles, is dangerously open to the sea from the NE; and, even at the anchoring place, ships are in danger when a westerly wind rushes through the valley of Colli between the mountains. It stands in a pleasant fruitful country, on the NE end of the island, and at the bottom of a gulf of the same name. Lon. 13 23 E, lat. 38 15 N.

Palermo, town of Naples in Calabria Citeriore, six miles SSW of Cosenza.

Palicanacherry, town of the peninsula of Hindoostan, in the country of Calicut, 20 miles S of Coimbatore, and 66 SE of Calicut.

Palestine, part of Turkey in Asia, so called from the Philistines who inhabited its sea coasts; it is called also Judaea, from the patriarch Judah, and the Holy Land, from its having been the residence and scene of our Saviour's passion, and in Scripture Canaan, and the Promised Land. It is bounded by Mount Libanus, which divides it from Syria on the N, by Mount Hermon, which separates it from Arabia Deserta on the E, by the mountains of Seir and the deserts of Arabia Petrea on the S, and by the Mediterranean on the W. It is in general a fruitful country, abounding in corn, wine, and oil, where cultivated, and might supply the neighbouring countries with all these, as it anciently did, were its present inhabitants equally industrious. The parts about Jerusalem, its once famous capital, are the most moun-

tainous and rocky, but they feed numerous herds and flocks, and yield plenty of honey, excellent wine and oil; and the valleys large crops of corn.

Palestine is formed by a ridge of limestone hills, or low mountains, extending nearly N and S, and two slopes; one towards the Mediterranean, and the other declining towards the river Jordan and Dead Sea. Like all limestone regions, its aspect when uncultivated is more desolate, and the soil in appearance more sterile than it is in fact.

Paraguay river, large branch of Orinoco, rises in the mountains of Guiana, its source interlocking with those of Essequibo, the Rio Branco, branch of Rio Negro, and those of the Orinoco. The entire course of the Paraguay is about 300 miles from south to north. It falls into the Orinoco about 80 miles below St. Thomé, and Angostura. See *Ourom* in the Addenda.

Paraguay, large country of South America, bounded on the N by Amazonia, on the E by Brasil, on the N by Patagonia, and on the W by Chili and Peru. It contains six provinces; namely, Paraguay Proper, Parana, Guaria, Uruguay, Tucuman, and La Plata, from which the whole country is also called La Plata. It has numerous lakes and rivers; of the latter, the three principal are the Paraguay, Uruguay, and Parana; the united streams of which form the celebrated Rio-de-la-Plata. These rivers annually overflow their banks, and, on their recess, leave them enriched by a slime, that renders the soil extremely fertile. This vast country is far from being wholly subdued or planted by the Spaniards; many parts being still unknown. The principal province of which we have any knowledge is that called La Plata towards the mouth of the Rio-de-la-Plata. This province, with all the adjacent parts, is one continued plain for several hundred miles; extremely fertile, and producing cotton in great abundance, tobacco, and the valuable herb called Paraguay, which is peculiar to this country, and the infusion of which is drank in all the Spanish provinces of South America, instead of tea. They have also a variety of fruits, and very rich pastures; but the country is destitute of woods. The air is remarkably sweet and serene. The Spaniards discovered this country, by sailing up the Rio-de-la-Plata, in 1515, and founded the town of Buenos Ayres. In 1580, the Jesuits were admitted into these fertile regions, and in the next century, founded the famous missions of Paraguay; which were a number of colonies, each governed by two Jesuits, one of whom was rector, and the other his curate. They had long resisted the Spaniards and Portuguese; but the Jesuits by learning their language, conforming to their manners, &c. soon acquired great authority among them; till at last, by steadily pursuing the same artful measures, they arrived at the highest degree of power and influence, being in a manner the absolute sovereigns of a great part of this extensive country; for above 350,000 families are said to have been subject to them, living in obedience and awe bordering on adoration, yet produced without the least violence or constraint.

In 1767, the court expelled the Jesuits, and the natives were put upon the same footing with the other Indians of the Spanish part of South America.

Paraguay, river of South America, rises in Mattagrosso in Brazil, and flowing nearly South, enters the United Provinces of La Plata, receives the Pitcomayo, and Vennejo from the W, and after a comparative course of 1000 miles joins the Parana. It is navigable for vessels of large size to the city of Assumption.

Paramaribo, the capital of Surinam, in Guiana, and the chief place of the Dutch colonies in South America. It has a strong citadel; and a noble road for shipping, where there are seldom less than 80 vessels loading coffee, sugar, cotton, and indigo for Europe. The streets are perfectly straight, and lined with orange, shaddock, tamarind, and lemon trees in everlasting bloom. It is situated on the E side of the river Surinam, 16 miles from its mouth. Lon. 55 25 W, lat. 5 48 N.

Parana, which rises in Minas Geraes and Goias in Brazil, and flowing W upwards of 500 miles, turns SW, and continuing in that direction about 500 miles enters the United Provinces of La Plata, and receiving the Paraguay, turns to SSW, and flows in that direction again about 500 miles, curves to SE, 100 miles unites with the Uruguay, and loses its name in that of Plata river.

Parana, province of Paraguay, so called from a large river, which uniting with the Paraguay, and afterward with the Uruguay, forms the Rio-de-la-Plata.

Parachim, town of Lower Saxony, in the duchy of Mecklenburg, seated on a small river which falls into the Elbe. It is 20 miles SE of Schwerin. Lon. 12 0 E, lat. 53 34 N.

Parima, or *Branco*, river of South America, a branch of the Rio Negro, rises in the mountains of Guiana, its sources interlocking with those of Essequibo, and Paraguay of Orinoco. It flows nearly S, and enters the Rio Negro.

Parina Cochas, province of Peru, lying N from Arequipa.

Parima, lake of South America, near the borders of Amazonia, and Guiana, of a square form, 80 miles long and 40 broad. It seems to be a kind of inundation formed by the Orinoco; for that river enters on the N and issues on the W side of the lake, near its NW angle. From the SE of this lake issues the White river, called also the Parima, which flows S to the Black River, and thence S to the Rio Negro. To the W of this lake, before the main stream of the Orinoco turns to the N, there are two other branches that flow from it to the Black River. Hence there are three communications between those two great rivers, the Orinoco and the Amazon.

Paris, capital of France, one of the largest, finest, and most populous cities in Europe. The river Seine, which crosses it, forms two small islands, called Isle du Palais, and Isle Notre Dame; the first is the ancient city of Paris, and had its name from a building which was formerly the residence of the kings, and afterward resigned to the parliament. Paris has 16 gates, and is 15 miles in circumference, including the suburbs. That part of it which is called the ville

is situate to the north, the university to the south, and the city in the centre.—The streets are narrow, and generally without good accommodations for foot passengers. The houses are built of freestone, many of them seven stories high, and often contain a different family on every floor. The number of inhabitants, by a late official statement, is 715,000. There are nine principal bridges in Paris, but only three of them occupy the whole breadth of the Seine. There are a great number of public fountains, and some triumphal arches. Of the squares, the finest is the Place de Louis Quinze, of an octagon form, in which was an equestrian statue, in bronze, of that monarch. This square was the fatal scene of the execution of Louis XVI. of his consort Marie Antoinette, and his sister the princess Elisabeth. Beside the cathedral of Notre Dame, one of the largest in Europe, and which contains 15 chapels, Paris has many fine churches. The abbey of St. Genevieve, was founded by king Clovis, whose monument is still to be seen in the church; it has a library of 24,000 printed books, and 2000 manuscripts, also a valuable cabinet of antiquities and natural curiosities. The new church of St. Genevieve (now called the Pantheon) was destined by the national assembly, in 1791, to receive the remains of such great men as had merited well their country. The university, founded by Charles the fat, consists of four faculties; namely, divinity, civil and canon law, physic, and the sciences: its head is the rector, who is always chosen from the faculty of the sciences. The finest college in Paris is that of the Four Nations, called also Mazarin, from the cardinal, its founder. Among the public libraries, that called the Royal, holds the first rank, in respect both to the extent of the buildings, and the number of volumes. The royal observatory is built of freestone, and neither iron nor wood has been employed in the erection. The botanical garden is worthy of its appellation of royal. The four principal palaces are the Louvre, the Tuilleries, the Palais Royal, and the Luxemburg. In the Louvre is deposited the finest collection of paintings and statues in the world; the principal of them lately brought from various parts of Italy.—The garden of the Tuilleries, in front of the palace and on the banks of the Seine, is the finest public walk in Paris. The Luxemburg is famous for its gallery, in which are twenty exquisite paintings by Reubens. The Hospital-general, which also goes by the name of la Salpa-

treria (salt-petre being formerly made here) is a most noble foundation for the female sex; near 7000 of whom are here provided for, and live under the inspection of sixty sisters. To this incomparable foundation belongs the castle of Bicestre, defended on all sides by a wall, of considerable circuit, which contains within it many large buildings and several open places; and here near 4000 persons of the other sex are maintained. The Hospital de la Pietie, where poor children are brought up, constitutes also a part of the Hospital-general. These three foundations, with the Hotel Dieu, have one common fund, amounting to full two millions of livres a year. The Hotel des Invalides, for the wounded and supernatural soldiery, built by Louis XVI. is a magnificent structure; as is the military school in the Champ de Mars, founded by Louis XV. The two principal theatres are the Theatre de la Nation and the Italian theatre; which, in point of elegance and convenience are worthy the capital of a great nation. The Monoi, or miat, is also a noble building, situate on that side of the Seine, opposite the Louvre. The Samaritan is a beautiful edifice at the end of the bridge leading to the Louvre, and contains an engine for conveying the water of the Seine to all parts of the villa. The Hotel de Ville is an ancient structure; this tribunal stands in the Place de Greve, where all public rejoicings are celebrated, and common malefactors executed. The most interesting of the manufactures of Paris is plate-glass, and tapestries made after the pictures of the greatest masters. In the environs are excellent freestone and abundance of gypsum. Paris now forms, with a small district round it, one of the departments of France. It is 210 miles SSE of London, 265 W of Vienna, and 630 NNE of Madrid. Lon. 2 20 E, lat. 48 50 N.

Parys, mountain in the isle of Anglesey, famous for a copper mine, probably the largest bed of ore of that metal hitherto discovered in the world. "It is not wrought (says Dr. Aikin) in the common manner of subterraneous mines, but, like a stone quarry, open to day; and the quantities of ore raised are prodigious. The ore is poor in quality, and very abundant in sulphur. The purest part is exported raw to the smelting works at Swansea and other places, the more impure is first calcined and deprived of most of its sulphur on the spot. Quantities of nearly pure copper are obtained from the waters lodged beneath the bed of ore, by the intervention of iron. A lead ore, rich in silver, is also found in this mountain. The wealth and population of Anglesey have received a great increase from the discovery of this copper mine.

Pascagoula, river of Mississippi about N lat. 32 40, and flowing nearly S falls into the Sound between Horn Island, and the main shore at N lat. 30 20, consequently this stream flows through 2 20 of lat. or upwards of 130 miles. Taken as a whole, Pennsylvania is divisible into three great sections, of very unequal extent. The smallest but much best peopled section lies SE from the Kittatinny mountain or Blue Mountain; and contains about one third of Northampton, all Lehigh, Bucks, Berk, Montgomery, Philadelphia, Delaware, Chester, Lancaster Lebanon, nearly one half of Dauphin; all York, Adams, Cumberland, and nearly all Franklin counties. The mountainous or Middle section, extends over the counties of Wayne, Pike, two thirds of Northampton, all Susquehannah, Bradford, Luzerne, Tioga, Potter, Lycoming, Columbia, Northumberland, Union, Centre, Clearfield, Cambria, Huntingdon, Mifflin, Perry, one half of Dauphin, all Schuylkill, Bedford, and Somerset, with the eastern part of Westmoreland and Fayette.

The western hilly section includes the counties of McKean, Warren, Jefferson, Indiana, Armstrong, Crawford, Venango, Erie, Mercer, Beaver, Butler, Alleghany, Washington, Green, and the western parts of Fayette and Westmoreland.

Before proceeding to give the geographical detail of the state in general, the reader is presented with the following tables exhibiting the relative extent and population of each of the foregoing sections.

The relative density of population in Pennsylvania has followed the quality of soil perhaps less than in any state of the United States. The above table exhibits a singular inequality in the different counties, independent of either soil or commercial facility. It is seen that more than one half of the population exists on a small fraction above one sixth part of the entire area.

The following table exhibits the classified population of this state, agreeable to the census of 1810, and 1820.

Pennsylvania contains three cities, Philadelphia, Lancaster, and Pittsburg, and about 40 borough towns; the principal of which are, Reading, Harrisburg, Easton, and west of the mountains Greenburg, Brownsville, Washington, and Meadville.

The advance of population in this state, has been generally steady; about the middle of last century, it contained about 220,000; at the commencement of the revolutionary war, the population had risen to upwards of 350,000; in 1790, 434,373; in 1800, 602,545; and in 1810, and 1820, as shown in the table above.

The following table extracted from the files of the journal of the House of Representatives of Pennsylvania in 1821-22, exhibits the then state of the arms and militia of the state.

There is no other section of the United States, where the elements of population are so various as Pennsylvania. Taken relatively, as to national descent, this population is composed of English, Irish, Germans, Scotch, Dutch, &c. and

the descendants of these nations. The English language is general, but entire neighbourhoods of Germans have retained the German language. This is particularly the case in many of the southeastern counties. The religious denominations are also numerous, consisting of almost every sect of Christians known in the United States. The most numerous denominations are, however, Presbyterians, Roman Catholics, German Calvinists, German Lutherans, Friends, Baptists, Episcopalians, Methodists, &c. The Unitas fratrum, or Moravians have some small but very respectable congregations in different parts of the state.

The literary institutions of Pennsylvania, are, the university of Pennsylvania. See *Philadelphia City*; Dickinson college at Carlisle. Jefferson college at Canonsburg, Washington college at Washington, Alleghany college at Meadville, and Mount Airy college in Germantown.

Respectable academies exist in most of the county towns, and ample donations have been made by the legislature to foster the interests of education. The various libraries and other literary establishments in Philadelphia are noticed under that article which see.

The Moravian brethren, have excellent schools in Bethlehem, Nazareth, Lititz, and other places in the state. For Pennsylvania asylum for deaf and dumb persons. See article *Philadelphia*.

Perhaps the most extensive and best finished state road in the United States is that from Philadelphia, through Lancaster, York, Chambersburg, Bedford, and Greensburg to Pittsburg. The southeastern section, and the southern and western sides of the state are generally well supplied with good roads, but great part of the northern side of the state remains in that, as in every other respect unimproved. A diagonal state road has been designed, and in part executed from Philadelphia to Erie. So much in this treatise is given under the head of the respective counties as to preclude the necessity of detail in this article. I have to regret not being able to procure a statement of the present manufacturing establishments of this state. In 1810, the value of manufactured articles amounted to nearly 34,000,000 of dollars, and from comparing the number of persons engaged in manufactures in the United States, Pennsylvania is after Massachusetts and Rhode Island comparatively, the most manufacturing state in the United States.

In mineral wealth Pennsylvania stands far before any other section of the Union. The apparently inexhaustible stores

of mineral coal existing in the eastern, middle, and western afford with, an immense facility of water power in every quarter, means of carrying machinery to any extent, which an augmenting population may demand. For a particular notice of the different repositories of coal, see *Northampton, Schuylkill, Luzerne, Alleghany*, and some other counties.

The following tables exhibit a view of the roads, canals, bridges, and navigation companies of Pennsylvania at the beginning of the year 1822, are extracted from Vol. VIII. Laws of Pennsylvania.

On the 15th January, 1817 the auditor general was requested, by a vote of the house of representatives to furnish a statement of the incorporated companies to the stock of which the state had subscribed. From his report of the 17th (journals of the senate 1816—17, p. 286) the following is taken.

* Incorporated by the state of New York.

The number of miles of TURNPIKE ROADS contemplated by the charters of the incorporated companies is 2521. Of which there have been completed 1807, of these 1259 are of stone, having on their surface no angle greater than $4\frac{1}{2}$ or 5 degrees.

The amount of capital subscribed by individuals.	Dolls.
By the commonwealth.	4,158,347
Add half of the debts which it is probable the roads cost more than the amount subscribed	381,585
Total amount of subscriptions and appropriations to turnpikes.	6,401,474

When the works now in progress shall be completed there will be two complete stone roads from Philadelphia to Pittsburg, 300 miles each in length, one of which is already finished.

One continued road from Philadelphia to the town of Erie, through Sunbury, Bellefonte, Philipsburg, Franklin and Meadville.

Two roads having but a few miles of turnpike deficient, from Philadelphia: one to the New York state line, in Bradford county, passing through Berwick, and one to the northern part of the state, in Susquehanna county passing through Bethlehem.

One continued road from Pittsburg to Erie passing through Butler, Mercer, Meadville and Waterford.

Prior to the session of 1821—22, 146 companies have been authorized, of which 84 have been incorporated.

Monongahela,	90	18,360	30,000
		1,416,510	130,000

To which add the cost of the Conewago Canal private property estimated at 220,000, and the probable amount expended by White and company on the Lehigh of 150,000 dollars, together 170,000 dollars exclusive of the expenditure on the Schuylkill, and Susquehannah, and Delaware and Schuylkill. The amount of expenditures on this branch of internal improvement will be 1,916,510 dollars. If all these subscriptions, appropriations, and individual expenditures for roads, bridges, canals, &c. are added, the amount will be 10,369,779 dollars.

The number of Canal, and Lock Navigation companies which have been authorized is 18, of which nine have made progress in the works.

Strenuous exertions are now making to improve the navigation of the Lehigh, Schuylkill, and Susquehannah rivers. See these articles. The Union canal in-

tended to unite the navigation of Susquehannah with the Delaware is in progress. In brief the general aspect of the state is improving steadily, if not rapidly. The number of machines, including saw and grist mills, now in operation in the state must exceed 6000.

A fair view of the commercial operations of Pennsylvania, cannot be given as from its local position it possesses no point of general concentration. Baltimore and New Orleans are as much ports in this state as is Philadelphia. With all these points of diversion the amount of national revenue raised in Pennsylvania, stands in ordinary years next to New York. Estimates of either imports or exports to and from this state are also liable to the foregoing difficulties; and are consequently in all instances too confined in value. In 1820 the value of exports was valued at 5,743,549.

The partial views taken of the commercial relations of this state even by its legislature, may be seen from the subjoined table being confined to Philadelphia.

By resolution 16th March, 1820 and 1st February 1821, reciting in the preamble the importance of developing the resources of the state, and that as by the constitution of the United States it is declared that no state shall without the consent of congress, lay any imports or duties on imports or exports, except what may be necessary for executing its inspection laws, and that there was reason to believe that the charges of inspection are more than necessary for the purpose aforesaid, the inspectors in Philadelphia were required annually under oath to report to the auditor general the quantity and value of the articles inspected, &c. Wheat is by far the most valuable of the vegetable staples of Pennsylvania; but large quantities of wrought articles and also rye, oats, salted provisions, fruits, whiskey, live stock, iron in all forms of bar iron and hollow ware; flax-seed, &c. are exported. For the mountains and rivers of Pennsylvania, see the respective counties, and the article *United States*.

Pennytown, post village, of Hunterdon county, New Jersey, 10 miles NNW from Trenton.

Peno, town of Pike county, Missouri.

Penobscot river, falls into the Atlantic Ocean fifty miles north-east from the mouth of the Kennebec. The basin of the Penob-

scot is 150 miles in length, with a mean width of 55 miles. The sources of this river remain imperfectly known, but reach above north lat. 46° 0', and interlock with the sources of Chaudiere branch of St. Lawrence, those of St. John's river of New Brunswick and Maine, and those of Kennebec. This basin extends over an area of 8000 square mls. The tide ascends to the town of Bangor, 50 miles above the entrance of the bay. Though draining less surface than the Kennebec and Androscoggin, the Penobscot is more navigable than either, and is considered as the principal stream of Maine. Falls do not immediately occur in the Penobscot at the head of the tide. Boat navigation remains uninterrupted 20 miles farther inland. Timber and fish are the chief staples exported from this fine river, the former in immense quantities.

From Penobscot bay to that of Passamaquoddy, in a distance of about 100 miles, a number of small rivers enter the Atlantic Ocean, the principal of which are, Union river, Narraguagus river, Pleasant river, Chandler's river, Machias, and East rivers.

Union river falls into the Blackhill bay, the Narraguagus into Pigeonhill, or Narraguagus bay; Pleasant river into the bay of the same name; Chandler's river into English bay; and Machias and East rivers into Machias bay. None of those streams have sources sixty miles inland, and though in a very remarkable manner supplied with convenient harbours, the inland commerce of the country is very confined.

Penobscot county, Maine; bounded by Washington E; Hancock S; Kennebec SW; Somerset W; and Lower Canada N. This county embraces the central parts of the state on Penobscot and St. John's rivers. Its extent cannot be very accurately determined. Most of its area remains an unsettled wilderness. Staples lumber. Chief town, Bangor.

Penobscot, bay of Maine, at the mouth of the river Penobscot. It is long and capacious; and its E side is lined with a cluster of small islands.

Penobscot, seaport and post town, Hancock county, Maine, on the right side of Penobscot bay, 10 miles above Castine and 30 below Bangor. It is a place of considerable commerce—and in 1818, the shipping owned there exceeded 24,000 tons.

Penrse, seaport in Glamorganshire, on the Bristol Channel, 20 miles SE of Carmarthen, and 219 W of London. Lon. 4 12 W, lat. 51 37 N.

Penrith, town in Cumberland, near the rivers Eymot and Lowther, 18 miles S of Carlisle, and 280 NNW of London. Lon. 2 52 W, lat. 54 40 N.

Penryn, borough in Cornwall, on a creek of Falmouth Haven, has a great trade in the pilchard and Newfoundland fisheries, three miles NW of Falmouth, and 266 W by S of London. Lon. 4 59 W, lat. 50 10 N.

Pensa See *Penza*

Pensacola, capital of West Florida, seated on a bay of the gulf of Mexico, which forms a very commodious harbour, where vessels may ride secure from every wind. See article *Mississippi river*, section *Pensacola*, page 614.

The town of Pensacola is built along the north side of the bay on a sandy plain. It contains about 2000 inhabitants. Lon. W C 95 50 W, lat. 30 25 N

Pensance, or *Penzance*, seaport in Cornwall, on a creek of Mountsbay, carries on a considerable traffic in shipping. It is one of the tin-coinage towns, 12 miles E of the Land's End, and 281 W by S of London. Lon. 5 35 W, lat. 50 11 N.

Pensford, town in Somersetshire, noted for its hats and bread, and seated on the Chew, seven miles W of Bath, and 117 W by S of London. Lon. 2 30 W, lat. 51 23 N.

Penza, government of Russia, formerly a province of Kasan. Its capital, of the same name, is on the Sura, where it receives the rivulet *Penza*, 220 miles SW of Kasan.

Penzein, town of Germany, in Lower Saxony, in the principality of Mecklenburg, 53 miles E of Stettin. Lon. 15 36 E, lat. 53 30 N.

Penland Frith, dangerous strait, which divides the Orkney Islands from Caithnessshire, in Scotland. It is 24 miles long and 12 broad, and the sea runs with such impetuous force, that no wind can force a ship against the current.

Penland Hills, ridge of mountains, a few miles to the SW of Edinburgh, which afford good pasture for sheep, and extend about ten miles from SW to NE.

Peru, late a province of Spain in S America. It lies between lat. 1 30 N and 25 10 S, being nearly 2000 miles long from N to S, and 350 in breadth. It is bounded on the N by Popayan; on the E by the country of the Amazons and Paraguay; on the S by Chili and La Plata; and on the W by the Pacific Ocean. The land next the sea is mostly barren, some valleys excepted, into which the streams from the hills turn. Between the hills are very extensive valleys, yielding all manner of grain and fruit, and the weather temperate. The Andes are covered with snow the greatest part of the year, and consequently cold. The weather on this coast, from 4 deg. to 25 deg. S being generally serene. No rain falls in this tract unless within four or five degrees of the Equator. On the Cordilleras or high mountains, it rains or snows two thirds of the year. Peru was until the recent revolutions in Spanish America divided into three great audiences, which were Quito, Lima, or Los Reyes, and Los Charcos. The first were fixed at St. Fede Bogota, the capital of the kingdom of Granada, and extended over the whole of Terra Firma, and the audience of Quito. In the jurisdiction of the second, established in 1776, were the provinces of Plata, Buenos Ayres, Paraguay, Tucuman, Potosi, St. Cruz de la Sierra, and the towns of Mendoza and St. Juan. Lima is the capital.

Peru is now in a revolutionary state. That part formerly included in the audience of Charcos has been united to, and forms a part of the vast regions included in the United Provinces of La Plata. The northern sections are still nominally held by Spain.

The staple commodities of this great country include nearly all that is valuable in the vegetable and mineral kingdoms.

Peterhoff, in Russia, is situated about 20 miles from Petersburg, and is distinguished for its palace and gardens.

Peters, township of Franklin county, Pennsylvania; containing 1762 inhabitants in 1810, and in 1820, 2776. Situated between the E branch of Conegocheague creek and the North mountain, 10 miles S W of Chambersburg.

Petersboro' post town in Hillsboro' county, New Hampshire; 13 miles W of Amherst, 74 W by N of Newburyport, and the same distance from Boston. It is a place of very extensive manufactures; amongst which are, five cotton, and one woollen factory. Population in 1820, 1500.

Petersburgh, metropolis of the Russian empire, in the government of the same name, is situated on the river Neva, near the gulf of Finland, and is built partly upon some islands in the mouth of that river, and partly upon the continent. So late as the beginning of the last century, the ground on which Petersburg now stands was only a vast morass, occupied by a few fishermen's huts. Peter the Great first began this city, in 1703. He built a small hut for himself, and some wretched wooden hovels. In 1710, the Count Golovkin built the first house of brick, and the next year, the emperor with his own hand, laid the foundation of a house of the same materials. From these small beginnings rose the imperial city of Petersburg; and, in less than nine years after the wooden hovels were erected, the seat of empire was transferred from Moscow to this place. The streets, in general, are broad and spacious; and three of the principal ones, which meet in a point at the admiralty, are at least two miles in length. Most of them are paved; but a few are still suffered to remain floored with planks; and, in several parts of this metropolis, wooden houses, scarcely

superiour to common cottages, are blended with the public buildings. The brick houses are ornamented with a white stucco, which has led several travellers to say, that they are built of stone. The mansions of the nobles are vast piles of building, furnished with great cost, in the same elegant style as at Paris or London, and situated chiefly on the S side of the Neva, either in the admiralty quarter, or in the suburbs of Livonia and Moscow, which are the finest parts of the city. The views upon the banks of the Neva exhibit the grandest and most lively scenes imaginable. That river is in many places as broad as the Thames at London; it is also deep, rapid, and as transparent as crystal; and its banks are lined on each side with a continued range of grand buildings. On the N the fortress, the academy of sciences, and the academy of arts, are the most striking objects. On the opposite side are the imperial palace, the admiralty, the mansions of many Russian nobles, and the English line, so called because it is mostly occupied by English merchants. In the front of these buildings, on the S side, is the quay, which extends three miles, except where it is interrupted by the admiralty; and the Neva, during the whole of that space, has been embanked, by order of the late empress, by a wall, parapet, and pavement of hewn granite. Petersburg, though more compact than the other Russian cities, still bears a resemblance to the towns of that country, being built in a very straggling manner. It has been lately enclosed within a rampart, the circumference of which is 14 miles. In it there are no fewer than 35 great churches, (almost every sect of Christians being tolerated,) and the number of inhabitants is supposed to be about 300,000. It is said that 3000 one horse sledges are employed for passengers in the streets, in winter. From its low and marshy situation, it is subject to inundations, which have sometimes risen so high, as to threaten the town with a total submersion. The opposite divisions of Petersburg, situated on each side of the Neva, are connected by a bridge on pontoons, which, on account of the large masses of ice driven down the stream from lake Ladoga, is usually removed when they first make their appearance; and, for a few days, till the river is frozen hard enough to bear carriages, there is no communication between the opposite parts of the town. Among the noblest ornaments of Petersburg, is an equestrian statue of Peter the great, in bronze, erected by Catherine II. in 1782. It is of colossal size, and stands on a huge pedestal of rock, brought there at great expense. Within the walls of the fortress, is the cathedral of St. Peter and St. Paul, in which are deposited the remains of Peter the great, and of the succes-

sive sovereigns, except Peter II. who was buried at Moscow. Petersburg is 355 miles NW of Moscow, 750 NE of Vienna, 525 NE of Copenhagen, and 300 NE of Stockholm. Lon 30 25 E, lat 69 60 N.

Petersburg, port of entry and post town in Dinwiddie county, Virginia; situated on the S side of Appomattox river, in lat. 37 12 N, and lon. 78 8 W. It is 25 miles S of Richmond, and 79 W of the borough of Norfolk. This is a place of considerable trade in cotton, grain, flour, and tobacco; the exports of one year having amounted to 1,590,000 dollars. Being in the centre of one of the earliest settled parts of the State, it is surrounded by a wealthy and populous country.

The situation of Petersburg, is peculiarly well adapted to both commerce and manufactures. The falls in Appomattox, present excellent sites for machinery; whilst a canal cut around them obviates their natural impediment to navigation. The town now contains, two banks and an insurance office. It occupies part of three counties. The body of the place is in Dinwiddie, but it also comprises the village of Blandford in Prince George county, and Powhatan in Chesterfield county.

Philadelphiæ, county of Pennsylvania; bounded by Delaware river SE; Delaware county SW; Montgomery county NW; and Bucks county NE. Length 18; mean width 7; and area about 120 square miles,

exclusive of the space occupied by Philadelphia and its suburbs.

The distinction made in the returns of the census of 1820, between the city and county of Philadelphia gives a very inadequate representation of the respective population of each. The tables annexed to those articles were constructed from the census, but it is necessary to enable the reader to correct the defect of the return. In the first instance, there is a material distinction, between the Incorporated Northern Liberties, and Northern Liberties township. To all commercial, and moral purposes, Philadelphia embraces the city, properly so called, Southwark, Spring Garden, the incorporated Northern Liberties and Kensington. With the aggregate population of these sections, the city contained in 1820, 108,809 inhabitants, and the county proper, separate from the city, 28,288.

With all this deduction Philadelphia county is one of the most densely populated counties in the United States. Besides the city of Philadelphia and its suburbs, the county contains the borough of Frankford, and village of Darby, Hamilton, Mantua, Germantown, Holmesburg, Bustletown, and some others of lesser note.

The real population of Philadelphia county, separate from the city of Philadelphia and adjacent corporations, is 28,288. The above comparative result is founded on that reduction.

Philadelphia, the second largest city in the United States, in Philadelphia

county, Pennsylvania, between the Delaware, and Schuylkill rivers, five miles above their junction. The original city was a parallelogram extending west from the Delaware to a little west of Schuylkill about 12,000 feet or a small fraction above two miles, and north and south 5,700 feet, or a little more than a mile. In the advance of commerce and other business the buildings were naturally extended along the main stream, the Delaware, and now reach, from the lower part of southwark to Gunner's run, the upper part of Kensington near four miles, and along Market street, from one river to the other. The north and south streets amount to 23, those from east to west 14, in the city proper. Except Dock street, those of the city cross at right angles. That regularity is not, however, extended to the Liberties. In the latter the streets intersect in most instances with more or less obliquity. Beside the main or principal streets, the city and liberties are diversified by a great number of minor streets, lanes, and alleys. The streets vary much in width. Broad street is 113, High or Market 100, Mulberry, or Arch street 60 feet; and the others of various widths.

The site of Philadelphia was originally but little diversified by elevations. The lower part was level, and the upper waving. The whole composed of an alluvial deposit of sand and gravel, overlaid by a thin stratum of vegetable earth. Common sewers have been formed under most of the main streets which carry the filth into the Delaware, and preserve the health, and contribute to the convenience of the inhabitants. No city of the United States is so well supplied with excellent water. The works erected on the Schuylkill to elevate the water into a reservoir, and that reservoir itself are works which would do honour to any city. An enormous dam has been erected in the river, by which wheels are set in motion which raise the water into a reservoir. This depository of fluid is placed on an eminence, above every other part of the site of the city. Pipes are thence continued, which convey the water to every part of the city proper; the Liberties have not yet procured that invaluable advantage. For the elevation, length, depth, and solid contents of the reservoir, see article *Waterworks*.

Few of the churches of Philadelphia have any distinguishing character of architecture or extent, to entitle them to particular notice. To this observation, the exceptions are, Christ church in Second street, the new and elegant Presbyterian church at the corner of Seventh and Washington streets, and the church now erecting in Tenth between Chesnut and Market.

The other public buildings are, the State House on the south side of Chesnut, between Fifth and Sixth streets; the new Theatre, on the north side of Chesnut, second house above Sixth. This elegant building does credit to the city, and to Strickland the architect. The National Bank, on the south side of Chesnut street, between Fourth and Fifth streets, is a magnificent structure, and one of the few in the United States constructed entirely of marble, architect also Strickland. The Philadelphia bank on Fourth and Chesnut, presents to the eye of a traveller nothing in particular, but the Bank of Pennsylvania, on Second between Chesnut and Walnut, is a chaste marble structure, architect Latrobe. It may excite just astonishment that a city so commercial as Philadelphia, has no Exchange.

The buildings however, which contribute most to distinguish Philadelphia, are those appropriated to literary and humane purposes. Of these the City Library claims the first notice. It stands on Fifth and Library streets, between Chesnut and Walnut. It is a plain, though spacious brick building, decorated with the statue of its founder Franklin, in a niche in front. The statue is formed of a block of white marble executed in Italy. The Library was incorporated in 1740; and now contains above 20,000 vo-

lumes. It is composed of two connected libraries; that of the city, properly so called, and the Loganian, the latter, a donation from Dr Logan. The library is open the afternoon of each day of the week, Sunday excepted; and books read by visitors in the library-room free of expense. Nearly opposite the Library stands the hall of the American Philosophical Society, containing the Hall of the Society, and the Athenæum. The Athenæum was incorporated in 1815, and now contains a valuable library, and the periodical works of greatest celebrity published in the United States, and Great Britain. The Philosophical society possesses also in the same building, a very valuable library, and cabinet of minerals. This society was incorporated in 1769.

Peale's Museum, the most extensive collection of objects of Natural History in America, occupies several rooms in the State House.

The Academy of Fine Arts, is situated on the N side of Chesnut, between Tenth and Eleventh streets. A view of the collection of Paintings, Prints, Statues, and Busts in this establishment would alone reward a distant and extended visit to Philadelphia.

The Academy of Natural Sciences, incorporated in 1817, stands on the S side of Arch, between Front and Second streets. It has a very valuable, and tolerably extensive collection of objects of Natural History, and a library exceeding 2000 volumes.

The University of Pennsylvania, occupies a spacious edifice on the west side of Ninth, between Chesnut and Market streets. The University as a literary institution was formed, from the old University, the College and charitable Schools of Philadelphia, and was incorporated in 1791. It embraces natural science and law, but is known chiefly as a medical school, in which latter capacity, it deservedly holds a high rank; not only among the seminaries of the United States, but of the world. The number of students vary from four to five hundred annually. In the medical department there are seven professors.

There are at this period, (December, 1822,) in all, public and private, 43 lecturers, actually delivering lectures on various subjects in Philadelphia.

The Pennsylvania Hospital deserves special notice. The buildings are between Spruce, and Pine streets, and between Eighth and Ninth streets. This establishment was formed in 1751, and it must be pardonable to say stands at the head of such institutions in the United States. It

embraces the two great objects of national charity; first, the protection and care of those whose maladies disable them from personal exertion, and whose poverty denies them the means of procuring other aid;—and a Lunatic Asylum. In the Hospital are an extensive Anatomical Museum, and the second largest library in the city, consisting of upwards of 5000 volumes.

The celebrated Painting of "Christ healing the sick," the present of its author, *Mr. West*, is deposited for public exhibition in a building erected for that purpose, in front of the Hospital, on Spruce street.

The Almshouse, to which is attached an extensive Infirmary, under the superintendence of many of the most respectable physicians in the city, is also situated between Spruce and Pine streets, but between Tenth and Eleventh streets.

Besides these extensive public, there are many private charitable institutions in the city.

The Widows', and Orphans' Asylum is one of those private establishments, the fruits of the active benevolence of a number of Philadelphia ladies. If the eye of an angel can view with complacency any human work, it must be one, where bereaved old age is protected, and where helpless orphan innocence is sheltered, protected, clothed and educated. This truly sublime institution is in Cherry and Schuylkill Fifth street.

In an unusually inclement night, January 23-24th, between one and two A. M. 1822, a most distressful calamity befel the Orphan's Asylum, by which the building appropriated to the Orphans, and 23 of those interesting children were consumed by fire. The charitable feelings of the citizens in general, and the munificence of the Legislature of Pennsylvania, have repaired the loss, as far as human means could effect such a work. The house is now rebuilding with renewed convenience, extent and safety; and the funds of the institution greatly augmented.

By an Act of the Legislature of the state, a particular system of public instruction has been framed and put in operation in the city and county of Philadelphia, and as far as practicable conducted on the Lancasterian plan.

During the three years since the Lancasterian system of education was organized in the city and county of Philadelphia, 7809 children have partaken of its benefits. The number attending the schools in February 1822, were

The expense of the sections not under the care of the controllers amounted to \$2657 42 cents.

The whole amount expended for the support of schools in the year 1821, was \$11,714 83 cents, which keeps the cost of education within the maximum limit of four dollars per annum for each child.

The number of children in the sections where Lancaster's system is not established does not appear by the controller's last report.

Those parts of the county not particularly mentioned, are the sections intended by the first and last paragraph of this extract.

As a commercial port, Philadelphia, from the peculiar features of the Delaware river, is more liable to be impeded by ice, than is either New York or Baltimore; but independent of that circumstance the former possesses perhaps as many natural advantages as either of the others. In 1816, the tonnage of the shipping owned in Philadelphia amounted to 101,850 tons. At present 1822, the tonnage amounts to upwards of 120,000 tons. The Delaware is not navigable to this city for ships of the line of the first class.

The subjoined prefatory remarks and table are extracted from the Democratic Press of November 29th, 1822.

The following is a statement of the number of vessels and passengers, which arrived at the port of Philadelphia during the months of June, July, August and September, for the years 1819, '20, '21, and '22. Its correctness, as far as vessels from foreign ports are concerned, may be implicitly relied on; and also the coasting trade, as far as it goes. If about thirty vessels a month, principally schooners and sloops from North Carolina, with naval stores and lumber, and from other ports in the United States are added, the account will be nearly perfect for the time specified. It should be borne in mind, that the summer is not the most active commercial season of the year. The spring and fall present a great many more arrivals, especially from foreign ports.

It will be seen by the table that there has been a gradual increase of the commerce of Philadelphia for the last three years, with the exception of 1820, which was owing in all probability, to the exaggerated stories which went abroad, respecting the partial prevalence of epidemic fever in the city.

As a manufacturing city, Philadelphia is first in the Union. It would be useless to specify the number or value of each article it may suffice to say, that in the City, Liberties, and environs almost every object of necessity, and some of ornament and luxury are produced. According to Coxe's View, the value of manufactured articles produced here in 1810, exceeded 16,000,000 of dollars. Printing is very extensively carried into operation; both in the production of books, and public prints.

The in and trade of Pennsylvania is very extensive. This city competes with New York, New Orleans and Baltimore in the supply of the inhabitants in the basin of Mississippi. Under the articles Lehigh, Delaware, Schuylkill, and Susquehannah, may be seen the various natural facilities of external and internal water communication open to Philadelphia; and under the same, and other articles, are noticed the artificial operations, either performed in progress, or designed, to aid the natural facilities.

or remove impediments to intercommu-
nication.

The United States Navy Yard at Philadelphia composes a part of South-
wark. The depth of water is sufficient
for launching vessels of the first class,
but not of floating them with their guns,
crews, and other necessary lading. Be-
fore being prepared for sea, ships of the
line have to be removed lower down the
Delaware.

The environs of Philadelphia have
been justly admired for soft, and yet var-
ied scenery. The banks of the Schuyl-
kill, are much more picturesque, than
those of the Delaware; and the former,
also, much more extensively and taste-
fully improved. Pratt's gardens above,
and Bartram's below the city are indeed
elegant and rich additions to a picture
rendered more seductive by contrast
with the two fine villages of Hamilton
and Mantua, and two beautiful and noble
bridges which connect those villages to
the city. The whole interminged with
numerous detached seats, and crowned
by the artificial cascade, locks, water
works, and reservoir at Fair Mount.

Taken together, if we engroup its ad-
vantages and disadvantages; if we con-
sider the order of its citizens, the clean-
ness, and regularity of its streets, and its
well cultivated and abundant neighbour-
hood it may be doubted whether more is
concentrated in any other place to minis-
ter to human comfort and prosperity.

Pickaway, county of Ohio; bounded by Ross S; Fayette W; Madison NW; Delaware N; Fairfield E; and Hocking SE. Length 22; width 21; and area about 470 square miles. A considerable portion of the land, especially on the eastern side of Sciota river, is of a very superior quality, and produces immense quantities of the different kinds of grain. It was estimated that 10,000 barrels of flour were exported from this county in the spring of 1817, for the New Orleans market. "It has the four varieties of woodland, barren, plain and prairie. The plain land equals, and perhaps, excels any other land in the western country, for the production of wheat; generally producing from forty to forty-five bushels per acre of the first quality.—The prairies are best for corn and grass, and the barrens produce excellent pastures. These three kinds of land probably compose one fifth part of the land of the county: the other four fifths being now, or not long since, heavily timbered." Sciota river runs from north to south through nearly the middle of the county. The other principal streams are Lower Walnut, Darby and Deer creeks.

Pittenween, seaport in Fifeshire, at the entrance of the Frith of Forth, 23 miles NE of Edinburgh. Lon. 2 49 W, lat. 56 12 N.

Pittsburg, town of North Carolina, seat of justice, Chatham county. It is famous for pure air and water, and stands on a rising ground, in a rich and well cultivated country, 16 miles W of Raleigh. It contains an academy, and about 300 inhabitants.

Pittsburg, city of Pennsylvania, and seat of justice for Alleghany county, on the point above the confluence of Monongahela and Alleghany rivers: 230 miles from Baltimore, 282 from Philadelphia, and 1935 miles by water above New Orleans.

Pittsburg occupies an alluvial plain, and part of the adjacent hill, and lies in form of a triangle. It is admirably situated for trade and manufactures. The two fine streams which unite before its salient point, open to its citizens an immense surface comprising part of West New York, and Virginia, and all West Pennsylvania; whilst the Ohio connects it with the wide basin below. The adjacent hills abound with mineral coal, lying upwards of 300 feet above the streets of the city. It has already become the theatre of great manufacturing establishments. In Pittsburg and the adjacent villages of Alleghany and Birmingham, there are in operation eight or 10 steam mills, five glass houses, four air furnaces, three or four breweries, a number of distilleries, with an indefinite number of blacksmiths' shops, slitting mills, woollen and cotton cloth factories, rolling and slitting mills, fulling mills, potteries, blast furnaces, flour mills, boat yards, &c. Glass of every description is made in this place, from window glass and porter bottles, to the finest cut crystal glass.

In a commercial point of view, this city is composed of Pittsburg properly so called; the Northern Liberties, extending from the city up the Alleghany, the village of Alleghany, on the opposite side of Alleghany river, a street extending up Monongahela from the city, and another directly opposite on the west side of that stream, and lastly Birmingham also, on the west side of the Monongahela, about half a mile above the city. The various manufactories and

workshops are scattered promiscuously through these several places.

The progressive population of this city and suburbs has been rapid and tolerably regular. At present 1822, there exists within one mile of the centre of the city near 10,000 persons classed as follows:

Engaged in Agriculture	-	-	600
do. in Manufactures	-	-	1,200
do. in Commerce	-	-	150

Two fine bridges connect Pittsburg with the adjacent country, one over each river. Except in very clear and moderately windy weather, the view of Pittsburg is far from pleasing, as the atmosphere is generally surcharged with a heavy load of smoke; but when the air is rendered clear by wind, few places can present a series of views more interesting. The two rivers, their bridges, numerous manufactories, the varied hills, and other objects, are engrouped with great variety of effect.

Poland, large country of Europe, bounded on the N by Prussia, Courland, Livonia, and Russia, W by the Baltic, Brandenburg, and Silesia, S by Hungary and Moldavia, and E by Russia and the territories wrested by that power from the Turks. It is divided into four principal parts, Great Poland, Little Poland, Red Russia, and Lithuania; each of which is subdivided into palatinates, or provinces. Poland has not had any political existence as a nation since 1793. Formerly, the government was monarchical and aristocratical; all the acts of state being in the name of the king and republic of Poland. The king was the only elective sovereign in Europe; being chosen by a general diet summoned by the archbishop of Gnesna, as chief of the republic during the interregnum. In 1772, a partition of this country, projected by the king of Prussia, was effected by that monarch, in conjunction with the empress of Russia and the emperor of Germany. By this partition, one third of the country was wrested from the republic, the diet being compelled, by a foreign force, to make and to ratify this important cession. The three partitioning powers, moreover, forcibly effected a great change in the constitution. In 1791, however, the king and the nation, in concurrence, almost unanimously, and without any foreign intervention, established another constitution; and one so unexceptionable every way, that it was celebrated by Mr. Burke, as a revolution, whereby the condition of *all* were made better, and the rights of *none* infringed. By it the broils of an elective monarchy, by which Poland, on almost every vacancy of the throne, had been involved in the calamities of war, were avoided, the throne being declared hereditary in the house of Saxony. A few of the nobility, however, discontented at the generous sacrifice of some of their privileges, repaired to the court of Russia; and their representations concerning the Ambassadors views of the empress, she sent an army into Poland, under pretext of being guarantee of the constitution of 1772. Her interference was too powerful to be resisted; and this new constitution was overthrown. But the

principal object for which the Russian army entered Poland was not yet attained. The empress had planned, in conjunction with the king of Prussia, a second partition of this country, which took place in 1793. Such multiplied oppressions at last roused the spirit of the nation. General Kosciusko appeared in 1794, at the head of a Polish army, to assert the independency of his country, and to recover the provinces wrested from it. He was successful at first, against the king of Prussia; but was at length overpowered by numbers; the country was in different parts desolated, the houses burnt, and the inhabitants massacred in crowds. The brave Kosciusko was taken prisoner, and sent with a number of other patriots into confinement at Petersburg, for having dared to defend their native country against foreign aggression. The king formally resigned his crown at Grodno, in 1796, and was afterward removed to Petersburg, where he remained a kind of state prisoner, till his death, in 1798. With him ended the kingdom of Poland, subdued and dismembered by powers which were either formerly its vassals, or indebted to it for their very existence. But the same horrors and aggressions which had marked the conduct of the dismembering powers, with regard to this unhappy kingdom, have since been but too justly retorted on themselves. The whole of the country was divided among the three partitioning powers. Austria had Little Poland, and the greatest part of Red Russia and Podolia, which is now called the kingdom of Galicia; Prussia had Great Poland, Polish Prussia, a small part of Lithuania, and Polachia; and Russia had Samogitia, the remainder of Lithuania, Volhinia, and Podolia. In the war with Prussia, in 1806, the French penetrated into Poland, and proclaimed their desire to restore its ancient independence, when treaties of peace having been adjusted with Russia and Prussia, the project was for the most part abandoned. By the peace of Tilsit, the king of Prussia renounced the possession of the greater part of his Polish provinces, when they were erected into the dukedom of Warsaw, in favour of the king of Saxony. See *Warsaw*. But on the retreat of the French army out of Poland, in 1813, the Russians took possession of the duchy of Warsaw, in whose hands it at present remains. It is now expected, however, that the kingdom of Poland will shortly be re-established under a Russian prince. The towns of Poland are for the most part built of wood; and the villages consist of mean cottages, or huts. The country is so fertile in corn in many places that it supplies Sweden and Holland with large quantities, and it has extensive pastures. Peat, ochre, chalk, belemnites,

agate, chalcedony, cornelians, onyxes, jasper, rock crystal, amethysts, garnets, topazes, sapphires, and even rubies and diamonds are found in Poland; also talc, spar, lapis calaninaris, coal, iron, lead, and quicksilver. Here is much leather, fur, hemp, flax, saltpetre, alum, manna, honey, and wax; and there are mines of salt, of a great depth, out of which is dug rocksalt. Horses are numerous, very strong, swift, and beautiful; and horned cattle are bred in such numbers, that above 80,000 are driven every year out of the country. The principal rivers are the Dnieder, Vistula, Bug, Niemen, Dniester, and B. g.

Poland, kingdom of Europe. The central provinces of Poland have been recently formed into a kingdom of which the emperor of Russia is king. Some considerable share of the ancient liberties of Poland are preserved. Though subject to the same monarch with Russia, Poland enjoys a much more liberal form of government than the former empire. The king is represented by a vice roy, and chamber of ministers. The latter accountable to the senate. This body consists of 30 members. It is bounded on the W and S by the Atlantic Ocean, and E and N by Spain. Though Spain and Portugal are in the same climate, yet the air of the latter is much more temperate than that of the former, on account of the neighbourhood of the sea, and being less elevated. The mountain chains of the peninsula generally extend E and W, and most of those of Spain reach into Portugal. The vegetable productions are very much varied, consisting of wheat, oats, barley, olives, apples, peaches, oranges, lemons, wines, &c. Silk is made in abundance, and of excellent quality. Wine is the chief article of export, but salt and wool are also produced and exported in ordinary years, to the amount of one million and a half of dollars.

The recent revolutions in Europe and the Brazils, have very materially affected the foreign and domestic relations of Portugal. Formerly the king was absolute, now the ancient free constitution of the kingdom has been restored with meliorations to suit the improved condition of the age. This new form of government is now in operation. whilst Brazil is in a disturbed state. The internal concerns of neither, can be considered as fixed on a permanent basis.

Potosi, town of Peru, capital of a jurisdiction to the south of Charcos. Here are the best silver mines in all America, in a mountain in the form of a sugar-loaf. Silver was as common in this place as iron is in Europe; but the mines are now much exhausted, or at least little is got in comparison of what was formerly. The country around is so naked and barren, that the inhabitants get their provisions from the neighbouring provinces. It is seated at the bottom of the mountain of Potosi, 260 miles WNW of Africa. Lon. W C 9 30 E, lat 19 50 S.

Potosi, or *Mine-au-Burton*, post town and seat of justice, Washington county, Missouri 70 miles WSW from St. Louis, and 55 W from St. Genevieve.

Potosi, *San Louis*, intendency of Mexico. This intendency is but vaguely defined. It is generally considered to embrace the northeastern part of Mexico, towards the United States, along the gulf

of Mexico; and including New Santander, New Leon, and a part of Texas. See *Mexican empire*.

Potsdam, city of Upper Saxony, in the middle marche of Brandenburg, with a palace belonging to the king of Prussia. It is the most elegant and singular city in Europe; on an island 10 miles in circumference, formed by the rivers Spree and Havel, 12 miles W of Berlin. Lon. 13 46 E, lat 51 52 N.

Potsdam, province of German Prussia, comprehending the Ucker Mark, the Mark of Priegnitz, and the greatest part of the Middle Mark. It lies between Pomerania, West Prussia, and Saxony.

Potter, county of Pennsylvania, bounded by Alleghany county, New York N; Steuben in New York NE; Tioga county, in Pennsylvania E; Lycoming SE; and S; and M-Kean W. Length 37; breadth 30; and area 1100 square miles. This county extends over an extensive table land from which the rivers flow like radii from a common centre; Alleghany flows NW into New York, the extreme SW sources of Tioga river, flows NE also into New York; whilst in the intermediate space Genesee rises, and flowing N pursues its course towards lake Ontario. Pine creek, Kettle creek, the Sinamahoning, and Driftwood, branches of the West Branch of the Susquehanna, all rise in the southern section of this county, and flow south. All these streams rise near Coudersport, and very near the centre of the county. The sub-joined table will exhibit the uncultivated state of this extensive county.

The following additional information respecting this county was forwarded to the publishers, and inserted, though rather lengthy from the importance of its contents.

The county derives great advantage from the navigation of the Appomattox—a large part is fertile, well watered, and highly cultivated—industry and economy characterize the inhabitants—the most numerous religious denominations are the Methodist and Baptist; there are three Presbyterian churches. An English school is kept in every neighbourhood; six or eight valuable classic schools are maintained; and great attention is given by the more wealthy citizens to female education. Various benevolent Associations are formed for the distribution of bibles and tracts, for the support of Sabbath schools, and for educating indigent and promising youth.

Hampden Sidney College in this county, has an elevated, dry and remarkable healthy situation, 80 miles south-west from Richmond, and central to the southern section of Virginia. The college was founded in 1775. The following men have successively filled the presidential chair, viz:

The Rev. Saml. Stanhope Smith, D.D. L.L.D.

The Rev. John Blair Smith, D.D.

The Rev. Archibald Alexander, D.D.

The Rev. Moses Hoge, D.D.

The charter is as liberal and ample as that of any college in the United States.

The corporation consists of 27 men, most of whom are graduates of other colleges—the laws of the corporation, which relate to the instruction, and to the internal government of the college, are committed to the faculty, consisting of the president, professors, and tutors.

The following professorships have been established, the president is the professor of Mental Philosophy, Rhetoric, Moral Philosophy, and Natural Law. The professor of Chemistry and Natural Philosophy, of Mathematics, and of the Learned Languages.

The apparatus is adequate to a very liberal course of experiments in Chemistry and Natural Philosophy. A collection of valuable specimens is the commencement of a mineralogical cabinet. The College library, with those belonging to the Philanthropic, the Union, and Philosophical societies, exceed 2,000 select volumes. The permanent funds of the college, consist in land, and bank stock. By a provision of the Legislature, it will receive a more ample endowment.

The number of undergraduates at the close of 1821, exceeded 100, and is rapidly increasing. In addition to the present buildings, a brick edifice is now erecting, 180 feet in length, 50 in breadth, and four stories in height, containing 48 rooms for the accommodation of students, besides 40 feet of the center, which contains the chapel 40 feet by 50, and the other public rooms.

There is also a valuable Academy, under the direction of the faculty, in which those studies only are taught that are required for an admission into the lowest college class.

The college year has two sessions; the winter session six months, commences with November and ends with April. The summer session, commences with June and ends with the college commencement, on the last Thursday in September.

The expense

For board	\$10 a month	\$100 for the year
For tuition	4 do.	40 do.
For room	} 1 do.	10 do.
rent and servants		

Amount \$15 a month \$150 a year

There is no town or village in the vicinity of the college, and the students are distinguished for virtue and order.

 of persons educated in this college from
 its foundation were 1425, of whom 1023
 were living in 1815. Annual amount of
 collegiate and other expenses for a stu-
 dent at this college \$225.

A theological seminary was formed
 here in 1812, by the General Assembly
 of the Presbyterian Church. The edi-
 fice for this institution is a spacious stone
 building, standing to the east of the road
 from Princeton to Trenton, a little S of
 the village. The foundation has two
 professors, one for Didactic and Pole-
 mic Theology, and the other of eccle-

siastical history. Students about 70. Present population of Princeton about 500.

Putnam, post town of Muskingum county, Ohio, on the west bank of Muskingum river opposite Zanesville. A substantial wooden bridge on stone piers unite the two towns.

Putney, village in Surry, seated on the Thames, five miles WSW of London.

Putney, post town and township Windham county, Vermont on Connecticut 33 miles S from Windsor. Population 1820, 1650.

Putumayo, or *Ica*, river of South America, rising in Quito, flows E about 300 miles, takes the name of Ica, turns to SE, and continues into the Amazon. Lon. W C 8° E, lat. 3° S.

Puy, town of France, in the department of Upper Loire and late province of Velay, seated on the mountain Anis, near the river Loire. Puy has manufactures of lace and silk stuffs, and is 45 miles NE of Mende.

Puycerdà, town of Spain, in Catalonia, and capital of Cerdagna, between the Carol and Segra, at the foot of the Py-

renees, 53 miles W of Perpignan and 67 NW of Barcelona. Lon. 1 50 E, lat. 42 56 N.

Puy de Dôme, department of France, containing part of the late province of Auvergne. This department includes almost all Limagne, a territory about 12 leagues long, by six broad; one of the most pleasant and fertile in France; in which are seen, under the same point of view, orchards, meadows, vineyards, arable land, in a word, every kind of cultivation imaginable. The borders of this basin, or circular plain, are mountains now covered with habitations, herds, and flocks, but once so many volcanoes, which exhibited to the inspection of the learned the most extraordinary phenomena. Clermont is the capital of this department.

Puy-en-Anjou, town of France, in the department of Maine and Loire and late province of Anjou, 10 miles SW of Saumur, and 260 of Paris. Lon. 0 13 W, lat. 47 6 N.

Puy-laurans, town of France, in the department of Tarn, and late province of Languedoc, eight miles SW of Castres, and 23 E of Toulouse. Lon. 1 57 E, lat. 43 35 N.

Puzzoli, celebrated but now incon siderable town of Italy, on the bay of Naples, 10 miles W of Naples.

Pwllheli, seaport in Carnarvonshire, at the head of an inlet of Cardigan Bay, between two rivers, six miles S of Newin, and 143 NW of London. Lon. 4 15 W, lat. 52 52 N.

Pyramids of Egypt, structures formerly counted one of the Seven Wonders of the World. They are built upon a rock, at the foot of the high mountains which accompany the Nile in its course, and separate Egypt from Lybia. Varicus have been the conjectures how and when they were built, yet no two authors agree exactly about them; however, this is certain that they are extremely ancient, and that there is no account, in any author of credit, when or for what reason they were founded.

Pyramids, Teocalli, and other ruins of North America. The stupendous magnitude of those monuments of antiquity on some parts of this continent is very little known. They are spread over an immense space of country in the empire of Mexico. They consist of:

Cholula, situated in the intendency of Puebla, N lat 19 02 W, lon. W C 21 13. This pyramid consists of four stages, perpendicular elevation 177 feet, and the horizontal breadth of the base 1,423 feet. Its sides are exactly parallel to the me-

ridians and parallels of latitude and constructed of alternate strata of brick and clay. It is matter of real astonishment to find the similarity of form and constituent material between this Mexican monument, and that of the temple of Belus, at Babylon, and the pyramids of Muisehich.—Dashour, near Sahara in Egypt.

The immense platform of this truncated pyramid has an area of 45,208 square feet whose sides exceed 212.5 feet. From this platform is seen in clear weather, the volcanoes of Puebla, Peak of Orizaba, and the mountains of Matlacueye.

The pyramid of Cholula and that of Touniuh Itzaqual, are very nearly of equal height, and about 10 feet higher than the Mycerinus, or third in elevation of the group of Ghize. Its length of base exceeds that of all similar monuments found by travellers on either continent; and is almost double that of Cheops. It has been supposed that this vast edifice was formed by an incrustation of clay and brick around a natural hill; but a road cut through part of the first, or lower stage favours the supposition, that it is entirely artificial. Though dilapidated by time, and, no doubt much depressed yet its height, and the length of its base are still 8 to 1; whilst that of Ghize is 8 to 5 nearly. It has long been observed, that a regular gradation of symmetrical pyramids surround the larger of those of Egypt. Mr. Grobert has published a drawing of the regular disposition of the small pyramid, which environ the Cheops and Mycerinus at Ghize. The teocalli at Cholula, and Teotihuican, are in an analogous manner surrounded by lesser monuments. To the west of the former, stand two prismatic masses, now called Alcosac, and Cerro de la Cruz.

To the NE of the city of Mexico, and of the lake of Tezcuco, in the Mexican Valley, are the remains of the Teocalli, or temple of the sun and moon, or pyramids of Teotihuican, consisting of two truncated pyramids, called in the Aztec language Tonatiuh Ytzaqual, house of the sun; and Metztli Ytzaqual, house of the moon. According to the admeasurements made by a Mexican, Dr. Orteyza, the house of the sun, which is most southern, has in its present state, a base of 682 feet, and 171 feet perpendicular elevation. The house of the moon has a lesser base and is only 135 feet in perpendicular height. Those monuments from their form would seem to have been the models from which the other teocalles of Mexico were constructed. The Aztec nations found by the Spaniards in New Spain, attributed the py-

ramids of Teotihuican to the Toultecs, consequently they must have been erected above 1000 years. Siguenza believes them to be the production of the Olmecs; if so, they are three or four centuries still more ancient, than if constructed by the Toultecs.

The faces of these edifices are within 52' of an exact conformity to the meridians and parallels. Their interior is clay mixed with small stones, encrusted by a shell of porous amygdaloid. Traces of a bed of lime covering the stones is still visible. Time, the inroads of vegetation, and human curiosity, are here as in all similar cases, changing the pyramidal to the conical figure, by erasing the features of the outer crust. The original was composed of four stages, again subdivided into steps of a little more than three feet. A winding staircase of large hewn stones formerly led to the top. The Tonatiuh Ytzaqual has according to Orteyza, a cubic mass of 32,743,201 cubic feet. To pierce such enormous bodies is a very difficult undertaking; it is therefore not easy to determine the problem, whether they are natural elevations modified by the hand of man, or entirely artificial. M. Humboldt inclines to the latter supposition respecting those of Mexico, and supports his opinion by their isolated position on plains. That those of Teotihuican are the product of art, is also rendered almost certain by the circumstance of a group of smaller pyramids surrounding the larger. These lesser monuments of about 30 feet elevation, extend from the four faces of the larger pyramids in vast streets in exact conformity to the meridians and parallels. They amount to many hundreds, and are more abundant south of the temple of the moon, than towards the temple of the sun. According to the tradition of the natives, these smaller pyramids were dedicated to the stars. There is little doubt but that they served as sepulchres to the chief of tribes. The whole plain bore formerly in the Aztec, and Toultec languages, the name of Micoatl or, *road of the dead*. "What analogies," says Humboldt, "with the monuments of the ancient continent. This Toultec, (or Olmec,) nation, arriving on the Mexican soil, in the seventh century, (or more early,) constructed on a uniform plan, several of these colossal monuments, those truncated pyramids, divided by tiers, like the temple of Belus at Babylon; whence did they derive the model of these edifices? Were they of Mogul race? Did they descend from a common stock with the Chinese, the Hiong-nu, and the Japanese?" Or more

probably, were they not a race whose civilization was indigenous? The pyramidal form of temples, and their north, and south, and east, and west position, are the result of obvious natural causes, apparent to all mankind.

Another ancient monument is the military intrenchment of Xocnicalco, situated to the SSW of Cuernavaca near Tetlanama. It is an insulate hill of 380 feet elevation surrounded with trenches and cut into five stages, or terraces covered with masonry. The whole forming a truncated pyramid, whose faces correspond to the cardinal points. The basaltic, and porphyry stones, are covered with hieroglyphics; the most striking of which, are crocodiles spouting water, and men sitting in the cross-legged position of Asiatics. The platform of this monument contains more than 96,825 square feet. Though M. de Humboldt calls this a fortress, it would seem from its form, to have had an analogous use with the pyramids of Cholula, and Teotihuacan. Edifices, however, answering the double purpose of forts and temples, have been found in various parts of the earth, in very distant ages.

The most remarkable monument of antiquity in America, for the elegance and symmetry of its ornaments is the ruins of the palace or temple of Mitla in Oaxaca. The walls of Mitla are decorated with Grecques, and labyrinths in mosaic, of small porphyry stones. Mitla was called by the Aztecs, *Miquitlan*, or, *place of sadness*. It appears from its form, and from tradition, to have been a palace erected over the tombs of the kings. It was a house of mourning, to which the monarch retired to deposit and weep over the remains of a beloved relative, and where he himself was one day to repose, with the ashes of his fathers. It is in the insipid stages of civilization, that these colossal monuments are erected for the dead. In Egypt, in India, in America, the founders are lost amid the fragments of their own mausoleums.

The palace tombs of Mitla, form three edifices symmetrically arranged, and in a very romantic situation. The principal and best preserved edifice is about 130 feet in length; a stair-way leads to a subterraneous vault, 88 by 26 feet. This gloomy recess is also ornamented with *Grecques*.

But what particularly distinguishes the ruins of Mitla from every other remain of Aztec architecture, is six porphyry columns, which are placed in, and support the ceiling of an immense hall. The columns the only ones yet found in America, evince the infancy of

art, having neither base or capital. Each is composed of a single block of amphibolous porphyry. They are 16.4 feet in height, and their proportions, 12 modules or 6 diameters, consequently would be higher than the Tuscan, if the inferior diameter of the columns of Mitla, were not in the proportion of three to two, to their upper diameter.

A striking analogy has been observed in the distribution of the interior apartments of Mitla, and in the monuments of upper Egypt, drawn by Denon. In the ruins of Mitla has been found paintings representing warlike trophies and sacrifices.

In the northern part of the intendancy of Vera Cruz, west from the mouth of the river Tecontula, at two leagues distant from the great Indian village of Papantla, we meet with a pyramidal edifice of great antiquity. This singular remain is of late discovery, not being known to the Spaniards above 60 years. The pyramid of Papantla is not composed of clay and bricks, mixed with basaltic stones, and faced with a wall of a nygdaloid, like those of Cholula, and Teotihuacan; the materials employed in the construction of those of Papantla, are enormous stones very regularly cut. Mortar is still distinguishable in the seams. The stones are carved full of hieroglyphics.

The base of this pyramid is an exact square, each side having 82 feet; its perpendicular height is about 60 feet. The pyramid of Papantla is not so remarkable for its mass, as for its symmetry, the fine polish of the stones, and their very regular cut. It is like all the other Mexican *Tocalli*, erected in stages, six remain distinguishable, and a seventh appears to be concealed by the vegetation, which covers its outside to its summit. A great stair of 57 steps conduct to the truncated top, or platform. On each side of the great stair, is a small stair. On each side are hieroglyphics, in which the figures of serpents and crocodiles in relief, are visible. Each story contains a great number of square niches symmetrically distributed. In the first story is 24 on each side, in the second 20, and in the third 16.

At an immense distance from the monuments of Mexico, near the Rio Gila, are found very extensive ruins of an ancient Aztec city, in the midst of which is the edifice, called by pre eminence, *la Casa Grande*, laid out in exact conformity to the four cardinal points. The ruins spread over more than a square league of ground. The Casa Grande is 445 by 276 feet, constructed with clay-

The walls are three feet 11 inches, in thickness. It is still perceptible, that this edifice had three stories and a terrace. The stair was on the outside. A similar construction is still preserved in all the villages of the independent Indians of the M qui, NW from New Mexico. The ruins are on a plain, where the remains of a canal is yet visible, which served to conduct the water of the Rio Gila to the city. The whole plain is covered with broken pitchers and pots, painted blue, red, and white. Amongst these fragments are found pieces of obsidian, (ilztli,) from which the Mexicans formed their knives and razors. The Indians of the Rio Gila yet retain a great share of their ancient civilization, and in their architecture, and household furniture, much of the perfection of their ancient arts.

To these ruins, in Mexico and the internal province, may be added, the remains found in the basin of the Mississippi. The latter are indeed much more diminutive than the former, and built on an entirely different plan. A connexion between the remains in Mexico, and those in Mississippi basin, has been supposed, but seems unsupported by any conclusive testimony arising from analogy. Obsidian is entirely wanting in the fragments of domestic utensils, and military weapons found in the Mississippi ruins. The pottery is also different in the two regions. But the most decisive circumstance evincing an entire dis-connexion, is, that in the intermediate countries no remains similar to either, are found. The solidity, extent, and hieroglyphic sculpture found on so large a scale, in the Mexican monuments, evince a state of science, art, and civilization, at least as far advanced as that of Egypt, at the period when the pyramids were constructed; whilst the rudeness, simplicity, and absence of all mental representation in their structures, prove that the ancient inhabitants of Ohio and Mississippi, were not more, if as far advanced in the arts of civilized life, as the present tribes of South Sea islanders.

The most remarkable circumstance, however, respecting the North American ruins, is, their almost entire non-existence, on the Atlantic slope, east of the Alleghany mountains, the aboriginal nations seem to have been at all times purely savage; whilst traces of agricultural life, are frequent and striking, W of the Alleghany ridge, in all the intermediate stages, from the barrow of Ohio, to the superb edifices of Puebla, Oaxaca, Mexico, and the Rio Gila.

It may be observed respecting all the pyramidal structures yet known, from

the temple of Belus, to the most rude barrow; that they are on alluvial soil, in most instances on plains, and that the founders, and the real purposes, for which erected are alike, lost in the darkness of past time.

Pyrenean Mountains, or *Pyrenæes*, a large chain of mountains, the principal of which are in the kingdom of Spain, which they divide from France; the general range equals the Alps in height, and extend from the Mediterranean Sea to the Atlantic Ocean, 200 miles in length, and 103 in breadth. They begin near the harbour of Vendres, in Roussillon and run as far as Fontarabia. Near Roussillon, they divide into two principal branches, one of which separates Roussillon from Languedoc, and is called Antipyrenæe; and the other, which separates it from Catalonia, is denominated Col de Pertuis. Over them are five passages, but all extremely difficult, and between them several fertile valleys.

Pyrenæes, Eastern, department of France, containing the late province of Roussillon. Although great part of the country is mountainous, it is fertile: producing corn, excellent wines, olives, oranges, and leather of a superior quality. Perpignan is the capital.

Pyrenæes, Lower, department of France, containing the late provinces of Basques, and Bearn. Pau is the capital. See *Navarre*.

Pyrenæes, Upper, department of France, containing the late provinces of Bigorre. Here are excellent horses and good partridges. The valleys are very fertile; furnishing rye, millet, Spanish corn, and flax. The mountains have mines of lead, iron, and copper, and quarries of slate, marble and jasper. Tarbes is the capital.

Pyrmont, town of Westphalia, in a county of the same name, subject to the prince of Waldeck, with a castle, the residence of the governor. Near it are mineral waters, well known to all Europe, and often frequented by persons of the highest rank, and preferred to those of Spa. It is 40 miles SW of Hanover. Lon. 9 20 E. lat. 52 0 N.

Pyrna, town of Germany in the electorate of Saxony, in Misnia. It has a castle, on a mountain called Sonnenstein, which has been used sometimes as a state prison. Near it is a fine quarry of stone, which is transported to different places by the river Elbe. Pyrna is seated on the Elbe, 10 miles SE of Dresden. Lon. 13 36 E. lat. 51 6 N.

Pysck, town of Bohemia, in the circle of Prachin, seated on the Attoway, near the Muldaw, 50 miles S of Prague. Lon. 14 45 E, lat. 49 16 N.

Q

Quacha, lake of Louisiana, between the Mississippi and Barrataria bay. The country adjacent to the Quacha lake is an open grassy marsh,

Quadin, town of Upper Egypt, seated on the Nile, between Elms and Dander, and remarkable for a great number of valuable and ancient monuments.

Quadra, and *Vancouver's Island*, on the Pacific coast of North America, extending from the Straits of St. Juan, de Fuca, to Queen Charlotte's Sound; 250 miles long by 50 mean width.

Quakenbrugge, or *Quakenburg*, town of Westphalia, in the bishopric of Osnaburg, seated on the Hase, 22 miles W of Osnaburg. Lon. 8 20 E. lat. 52 46 N.

Quadrant. See *Cadron*, Pulaski county, Arkansas.

Quakertown, village with a post office in Bucks county, Pennsylvania, about 37 miles N of Philadelphia.

Quang-fing-fou, city of China, in the N part of Pe-tcheli, between the province of Chang-tong and Ho-nan.

Quang-si, province of China, bounded on the N by Koei-tcheou and Hou-quang, on the W by Yunna and the kingdom of Tonquin, on the S by the gulf of Tonquin and the province of Quang-tung, and on the E by the same and Hou-quang. *Qui-ling-fou* is the capital.

Quang tong, the most considerable of the southern provinces of China; bounded on the NE by Fo-kien, on the N by Ki-ang-si, on the W by Quang si and the kingdom of Ton-king; the rest is washed by the sea. Canton is the capital; but the viceroy resides at Chao-king.

Quantico-mills, post village Somerset county, Maryland, 30 miles SE from Cambridge.

Quarten, town of Switzerland near the lake Wellenstadt, five miles E of Glarus.

Quatre Bras, hamlet or village of the Netherlands in Namur, seven miles W from Ligny. The French authors name the battle of Waterloo, from this place, or from Mount St Jean.

Quebec, city of and capital of British America, on the left bank of St. Lawrence river, about 400 miles above the sea, and 180 below Montreal. Lon. W 5 10 E, lat. 46 50 N. Population about 20,000.

This city stands upon a point of land the salient projection of a range of heights between St. Lawrence and Charles rivers. The ground rises from an alluvial slip

along the harbour, to the summit of Cape Diamond 350 feet. It is divided into the Upper and Lower towns, the whole fortified with every advantage of natural position and resource of art. The principal buildings; the Catholic Cathedral; Jesuits college now barracks; Protestant Metropolitan church; Hotel Diew, or female hospital; Ursuline Convent; General hospital; and the artillery barracks.

The basin or harbour is very spacious, and with a depth of 28 fathom. The commercial relations are extensive and increasing. In its actual state, Quebec is a place of primary importance as a mart of trade; the capital of extensive territories and post of great strength and capacity as a military station.

Queda, kingdom in the peninsula beyond the Ganges. It has a harbour, 300 miles N of the city of Malacca. Lon. 100 5 E, lat. 7 5 N.

Quedlinburg, town of Germany in Upper Saxony, in the principality of Anhalt. It is 10 miles SE of Halberstadt. Lon. 11 34 E, lat. 52 1 N.

Queen Ann, county of Maryland, on the eastern shore; bounded by Kent county in Delaware E; Caroline county in Maryland SE; Talbot S; Chesapeake bay SW; and Chester river or Kent county, Maryland NW. Including Kent island, this county is 40 miles long, with a mean width of 10; and area 400 square miles. Chief town, Centreville.

Red river, branch of Assiniboine, rises near the sources of Mississippi, flows N about 300 miles and joins the Assiniboine 70 miles above Lake Winnipeg. Lord Selkirk's settlement is near their junction.

Red river, branch of the Mississippi river.

Red River. This stream rises in the mountainous prairies E of Santa Fé of New Mexico between N lat. 32 and 35 ; W lon. W C 28° flows in nearly an eastern direction over 11 degree of lon. 640 miles in a direct line but at least 800 comparative course to where it turns to the SE and enters Louisiana and thence continuing the latter course 300 miles it joins the Mississippi at N lat. 31 1 W, lon. W C 14 45.

Red river is formed by a number of tributary streams, the principal of which are, False Ouachitta, Blue River, Kimitchie, and Vasseux. All these streams unite near the former. Paris Villages, about 350 miles below the sources of Red river. The Vasseux rises in the Great Prairie, about N lat 34° and W lon. W C 50°. The Kimitchie and Vasseux, rise in the same ridge, and pursue very nearly a similar course, each joining Red river, after a course of about 200 miles. Little river of the north falls into Red river, a short distance above the NW angle of Louisiana. It rises in the Maserne mountains, is a clear beautiful, and pure stream of water, of about 150 miles in length. From the source of Red river to the mouth of Little river of the north, is about 600 miles in a direct line, but much farther by comparative course. Little river of the south rises in the prairies, south of Red river, and about 40 miles SE of the Paris Villages, it runs nearly east 150 miles, and falls into Red river in Louisiana. The distance from the source of Red river to the mouth of Little river of the south.

is about the same as to Little river of the north, 600 miles in a direct line; but estimating the distance along the meanders of either False Ouachitta, Blue river, or Red river proper, and the distance must exceed 1000 miles. The Red river winds along the great inclined plain, dividing it into two parts, forming the limits between the waters which flow into the gulf of Mexico, and those entering the Mississippi. The country from whence Red river draws its water, is a vast prairie, except along the banks of the river, and even there, the very little timber is dwarf; the most abundant species, is a variety of the robinia, or black locust, called by the hunters, musquetoe wood. The range of low mountains, are extremely naked of timber.

After the junction of Blue river, Red river is navigable for boats of large size, during the spring floods, timber becomes more frequent and of larger size. At the mouth of Vasseux, pine first occurs on the south side; the banks are elevated above inundation, and the land of good quality. The river here is much wider than near the Mississippi. From the Paris Villages to near the Avozelles, the banks of Red river will admit settlement, and many of its tributary streams will in some future period, be the abode of civilized man. The banks are alternately either woodland or prairie, until within 20 miles above the mouth of Little river, of the south. Many spots along the river is covered by strong cane. The waters coming into Red river, from mount Cerne, are pure and limpid, but those of Red river and its southern branches, are brackish and turbid. Below the mouth of Little river of the south, Red river assumes a south course upwards of 100 miles in a direct line.

The immense volume of water brought down by Red river, cannot be contained within its banks during the season of flood, and about N lat. 33.^o the alluvial overflow commences. Here the river divides into a number of channels, the face of nature changes, the shores become low, the species of timber such as are generally found upon the banks of the Mississippi in corresponding latitudes except where by the winding of the stream a fine bluff approaches the river. The river is now filled with islands, and interlocking channels. A chain of lakes also commence on each side, which leaving the river, occupy the interval between the hills, on each side. These lakes serve as a natural deposit to the accumulating mass of water pouring down from the higher branches of the river. The most

remarkable of these lakes are, Bodcau, Bistineau, and Black lakes, on the left, and Cassi, Natchitoches, Spanish lake, and Cado lake, on the right side of Red river.

On reviewing this part of Red river, between the Grand Ecor, four miles above Natchitoches, and the lake of Bodcau, that the intermediate space was once a lake, which has been gradually filled by an accumulation of earth from the abrasion of the water on the banks of Red river, and its numerous tributaries. The lakes which now exist, all lie in the valleys of considerable streams communicating with Red river, whose mouths have been impeded by the alluvion of Red river, and natural drains formed from hill to hill. The beds of these recent lakes are much lower than the surface of the river at high water, though higher than the channel of the rivers. In autumn and the early part of winter, when the waters have been drained by the depression of the river, much of the ground, covered by the spring floods in those lakes become dry land, and exhibit meadows of succulent herbage. In the channels of most, there is consequently an annual flux and reflux, as the water in the river and lake, preponderate in height. When Red river commences its annual rise, the currents set strongly into the lakes, which gradually filling, return their flood into the river with equal velocity, when the depression of the river by the summer heat, begins to take place. This flux and reflux is continual. The connecting channels are never dry. Most of the lakes have the pine woods on one side of them, from which issue fine clear creeks of water, whose pellucid currents compensate to the inhabitants for the unpalatable waters of Red river. Were it not for those spacious depositories above Natchitoches, the fine alluvial border of Red river, below that territory would be much more restricted in extent, and, the cultivation of the whole greatly more precarious. From the upper part of lake Bistineau to the lower settlement on Red river opposite Avozelles, or even to the mouth of Black river, the lands are sufficiently high and fertile, for cultivation on both banks, and in every place on one side. The high lands or pine forests, pursue each side nearly the same course with the river. On the right bank the pine bluffs reach the river bank, for the first place below the alluvial tract above; four miles lower down, the pine hills again reach the river at the town of Natchitoches, and in two or three other places still lower

down, the pine hills again reach the river with a rocky base; but at the Bayou Rapide the high grounds on the right, quit the river entirely, continue SE towards Opelousas. On the left bank, the pine hills reach the river, below the alluvial tract at Campte, twelve miles, above Natchitoches, but follow the bank only three or four miles, when they retire, and do not again approach the bank until nearly opposite the Rapids; below which some few bluffs lie along the banks, the last of which is the Ecor a Cheniere opposite Avoyelles. From the Ecor a Cheniere to the mouth, Red river flows over an alluvial flat, annually overflowed.

What is generally, though very erroneously called the raft of Red river is merely what I have noticed, a maze of islands and channels, through which, though difficult, boats of any requisite size, can be conducted at high water. The raft as it is called, is not so great an impediment to the navigation of Red river, as is the rapids at Louisville to the Ohio, much less the Muscle shoals in Tennessee.

Rheinfeld, castle of Germany in the circle of Lower Rhine, and county of the same name. It is 15 miles S of Coblenz.

Rheinfelden, strong town of Suabia, eight miles E of Basle. Lon. 7 46 E, lat. 47 36 N.

Rheingau, district of Germany, on the E side of the Rhine, extending from Neider Wallauf, to Lorrach. The vine is here chiefly cultivated. Einfeld is the capital.

Rheinhausen, town of Germany in the bishopric of Spire. It is situated on the Rhine, three miles SE of Spire.

Rheinland, port of South Holland, lying on both sides of the Rhine. Leyden is the capital.

Rheinmagen, or *Remagen*, town of Westphalia, near the Rhine, 19 miles NNW of Coblenz. Lon. 6 30 E, lat. 50 38 N.

Rheinsabern, town of Germany in the bishopric of Spire, with a castle, 15 miles S of Spire.

Rheintal, fertile valley of Switzerland, lying along the Rhine. It belongs to the eight ancient cantons, and to that of Appenzel. The protestant inhabitants are the most numerous.

Rheinwa'd, large valley in the country of the Grisons; so called from the Hinder Rhine, which rises at the distance of 12 miles, and runs through the valley. Splugen is the capital.

Rhenen, city of the Netherlands, in Utrecht on the Leek, 20 miles SE of Utrecht. Lon. 5 22 E, lat. 51 50 N.

Rhine, great and remarkable river of Europe, which rises in Switzerland, in the canton of Grisons. It is formed of three streams; the Further Rhine from the head of the valley of Disentis; the Middle Rhine from the valley of Medelo, an appendage of St. Gothard; and the Hither or Upper Rhine from the mount Avicula. The first two torrents united is called the Lower Rhine, which receives the Upper Rhine at Richenan; and the height is here about 6180 feet above the sea. Flowing by Coire, at the distance of a mile, the Rhine here becomes navigable for rafts. It is soon after the boundary between the Rheintal and a territory of Austria, and passes through the lake of Constance from E to W. Leaving this lake, it becomes the boundary between Switzerland and Suabia, flowing by Schaffhausen (below which it forms a celebrated cataract) to Basle. At Basle the river turns to the N, and flows thence to Holland; in which course it becomes the barrier between France and Germany, gives name to the two German circles of the Upper and Lower Rhine, waters many considerable cities and towns, and receives some large rivers. Below Emmerick, in the duchy of Cleve, it divides into two streams: That which bends to the W, and flows by Nineguen, is called the Waal, but loses that name on its junction with the Meuse, at Gorcum. Below Gorcum, it divides into four principal branches, forming the isles of Ysselmonde, Voorn, and Overslackee: the most northern branch is called the Merwe, and passing by Rotterdam and Schiedam, is joined by the branch from the S side of Ysselmonde, and enters the German ocean, below Briel: the other two branches make their exit at IJ-voetsluis and Goree. The other stream which had branched off to the NW below Emmerick, retains its name; but below Huesen another branches off to the N, takes the name of Yssel, and enters the Zuider Zee, below Campen. The old river proceeds W by Arnhem to Duerstede, when it again divides into two streams: that to the left is called the Leek, and enters the Merwe above Rotterdam. The branch to the right, which retains its name, passes on to Utrecht, where it divides once more, into two streams: the smaller one is called the Vecht, which runs N into the Zuider Zee, at Muyden; and the other, the remains of the noble Rhine, flows W by Woerden to Leyden, where it divides into several channels, and afterward is lost among hills of sand near the village of Catwyck.

Rhine, *Lower*, formerly a circle of Germany. It extended on both sides the Rhine, from the circle of Suabia, on the S, to that of Westphalia, on the N; containing the late electorates of Mentz, Treves, and Co-

logne, the palatinate of the Rhine, the duchy of Westphalia, and the county of Lower Isenburg. It now belongs to Bavaria.

Rhine, Lower, department of France, containing the late province of Lower Alsace. Strasburg is the capital.

Rhine, Upper, department of France, containing the late province of Upper Alsace. Colmar is the capital.

Rhine, Upper, formerly a circle of Germany. It extended across the Rhine, from the province of Lorraine in France, on the S to the circle of Lower Saxony, on the N, and was nearly intersected by the palatinate of the Rhine. It included the margravate of Hesse, Wetteravia, the counties of Catzenellenbogen and Waldec; the imperial town of Frankfort, the bishoprics of Fulda, Spire, and Worms, and the duchy of Deux Ponts.

Rhine, Palatinate of the, late electorate of Germany, in the circle of lower Rhine; bounded on the N by the archbishoprics of Mentz and Treves, E by Franconia, S by Suabia, and W by France.

Extending from lat 41 18 to 42 1 N.
Area, exclusive of water, 1200 square miles, equal to 768 000 acres.

It is for its extent a very diversified state. The NW part is hilly and broken; but gradually subsiding to level land, advancing towards the Atlantic ocean. The islands are most delightfully variegated by gentle slopes and swells. The state is composed of three sections; that part W of Narragansett bay, bordering on Connecticut; the islands of Rhode Island, Conanecut, Prudence, and a few of lesser note; and two small slips on the E side of Narragansett bay. The soil of this state is as various as are the features of its geography; thin and rocky to the NW; level and in part marshy SE; but in the islands and many of the capes jutting into Narragansett bay, exuberantly fertile.

Rhode Island is the most manufacturing section of the United States in proportion to population. Cotton is the chief subject of manufacture. Including, those on Massachusetts near Providence, and owned in that city more than 100 cotton factories are in operation in that vicinity. The commercial prosperity of this state has kept pace with its manufacturing industry. The amount of con-

nage exceeds 40,000; and more than half the amount of exports of domestic produce. The exports in 1820, amounted to more than one million and seventy two thousand dollars.

In no part of the United States has banking been carried to such an extent. There are in Providence five, Newport five, Bristol five, Smithfield three, Westerly two, and at Warren, Pawtucket, Patuxet, Cranston, Gloucester, Burrillville, Scituate, Coventry, Greenwich, Wickford, and South Kingston, one each; 33 in all.

Common schools, have met no legislative support in Rhode Island, though the interests of education have not been neglected. See *Providence*. Academies exist in most of the towns, and private day schools are scattered over the state, in almost every neighbourhood.

Rhode Island, from which the state of the same name is formed, is situated in Narragansett bay, extending nearly N and S 15 miles, with a mean width of two miles and a half, and subdivided into the townships of Newport, Middletown, and Portsmouth. See *Newport county*.

Rhodes, island of the Archipelago, at

the entrance of the gulf of Macri, 40 miles long and 15 broad. The soil is pretty fertile, but badly cultivated. This island is much celebrated in ancient and modern history. It was taken by the Turks, after an obstinate resistance 1523; and the small number of knights that remained, afterwards removed to Malta. A pacha is the governor-general of the island, who presides over civil justice and military discipline.

Rhodes, capital of the island of Rhodes, was anciently nine miles in circumference, but the present town occupies only a quarter of the extent of the ancient city. It has a good harbour, with a narrow entrance between two rocks, on which are two towers to defend the passage. It is inhabited by Turks and Jews; for the Christians are obliged to live in the suburbs, they not being suffered to be within the walls in the night-time. Lon. 28 25 E, lat. 36 24 N.

Richmond, city and metropolis of Virginia, situated in the county of Henrico, on the north side of James' river, at the termination of the falls about 100 miles above the termination of the river, lon. 77 31 W, lat. 37 30 N, 21 miles N of Petersburg, and 124 miles W of S from the City of Washington; there are about 1400 houses, of which probably more than 1000 are of brick generally covered with slate, the rest of wood, the buildings in Richmond are generally plain, without much display of architectural taste or reference to other objects than utility; to this remark, there are however some exceptions, had the model of the capitol been equalled by its execution, it would be the finest building in the United States, its proportions are perfectly correct and its plan chaste; and even as it is, when seen from a distance, as is often the case, it seems to rise in greater grandeur and beauty before the spectator. The public square on which

the capitol stands, contains about eight acres, and has been enclosed by a substantial railing of cast iron; many other improvements have been designed and in part executed, which when completed, will render it a place of greater beauty. Near the capitol stands the Government house and City Hall, a handsome and costly building. The Presbyterians, Episcopalians, Baptists, and Methodists, have each two places of worship, the Friends, Roman Catholics, and Jews one; of these, that which will be regarded with most interest by the traveller, is called the Monumental church, now an Episcopalian place of worship, erected on the site of the Theatre, which on the 26th December, 1811, was consumed by fire, and in which the Governor of Virginia, G. W. Smith, Esq. and 71 other persons, many of them highly respectable, perished. The Monument, when completed, will commemorate this mournful event. A new Theatre has been erected, sufficiently spacious for the purposes for which it is intended. There are also a Penitentiary, an Armory, a Lancasterian School-house, an Orphan Asylum, a Poor-house, and a valuable though small Public Library, and a Museum in Richmond, besides a number of buildings connected with commerce and manufactures, such as three Banking houses, two Insurance offices, four Tobacco ware-houses, a Sugar Refinery, two Rolling and Slitting Mills, Nail manufactory, and four very valuable Flour Mills.

The town of Richmond was established by an act of the general assembly of Virginia, in the year 1742, and the seat of government for the state, was removed from Williamsburg in 1780; at which period the population may be conjectured at 500 persons; in the year 1822, the number of inhabitants of the city, and of such of the suburbs as are immediately connected with it, may fairly be rated at 16 to 18,000, a majority being white persons; this rapid increase of population during the last forty two-years, may in part be ascribed to the transfer of the seat of government, with its attendant advantages, but as the number of officers connected with the state government is not considerable, and the courts of higher jurisdiction which for a few years sat in the capitol, have since been branched out in such a manner that their sessions are held in other places—other causes must be sought for to account for the whole effect produced in the period first mentioned, the very fruitful country bordering on James' river above its falls, was partially and imperfectly cultivated, and the impossibility of obtaining a navigation through the rapids immediately above Richmond, had deprived the inhabitants of a free use of the river for the trans-

portation of the products of the state. In the year 1794, the canal was so far completed that all difficulty of passing the rapids were removed, and gradually since that time the navigation has been successively used for 250 miles above Richmond, passing the range of the Blue Ridge to the foot of the Alleghany mountains. The tolls of James' River Company, afford a correct view of the growing importance of the country in the years, viz.

As the variable condition of the stream has caused much uncertainty in the navigation, the legislature of the state employed two very skilful engineers to survey and level James' river from Richmond to Dunklap's creek, and report to the board of *Public Works*, what in their opinion will be the best mode of improving the river, and of connecting its waters with those of the Ohio; the result is, that the legislature have adopted the plan proposed by the engineers, and approved by the board of *Public Works*, namely, the construction of an independant canal, bordering on the north branches of James' river, and extending from Richmond to Dunklap's creek, a distance of 250 miles, a turnpike road of 90 miles in length from Dunklap's creek to a given point on the Great Kenawha, and an improvement in the bed of the Great Kenawha from that point to the Ohio river, which last, affords easy and safe conveyance to the Great Salt Works near its banks.

To accomplish this great plan, the board of *Public Works* have advised the legislature that an expenditure of \$2,383,755

will be required, and that upon a fair calculation of the tolls which may be exacted, founded upon the actual experience of the present company, an adequate interest may be expected upon the sum disbursed.

Three fourths of the shares of the original company have been purchased by the commonwealth, and \$500,000 have been already obtained, by a loan under its patronage, and the work is now in progress. As the funds of Virginia are exclusively applicable to internal improvement are most ample and active, no doubt can be entertained that they will be liberally employed in the successful prosecution of the work. The influence of this grand national effort will be felt within the limits of Virginia alone, through a country of very uncommon resources and fertility, extending 400 miles in length and 150 in breadth, and will afford to Ohio, Kentucky, Indiana, and other western states a very safe and expeditious communication with the Atlantic Ocean.

The benefits of this work will not be confined to Navigation alone, through the whole length of the canal a water power of great importance to manufacturers will be gained, and within view of the city of Richmond, it may not be unfair to calculate that 100 sites for machinery of different denominations may be found, each affording an ample supply of water at all seasons; this calculation is founded upon the fact, that the elevation of the canal above tide water of the dock, is little short of 30 feet, and that the natural condition of the falls will furnish very great resources for such a supply.

Such are the advantages which Richmond possesses above the falls, nor are those which she possesses below of less importance, for a distance of nearly 150 miles James' river meanders through an uncommonly productive country, and the depth of water is sufficient to bring vessels drawing 15 feet water, to a distance not exceeding three miles from the city; a bar of sand about 350 feet in width, forms the only obstruction to the mouth of the dock, which forms a safe harbour for more than 500 sail of vessels, drawing 12 feet water in the centre of the city. As to her exports, Richmond is most favourably situated, for enjoying a monopoly in the coal business, is the first port in the United States, as well as for quality and quantity of tobacco, and is not much behind any other city in the article of flour, which from a variety of circumstances attached to her local situation, is always ready for market there some months sooner than in other places.

The natural situation of Richmond is beautiful and even romantic, Shockoe and Richmond Hills stands opposite to each

other, with Shokoe creek a bold and lively stream between them. The city is spread over those hills, and along the margin of the river the hills have been thrown into various undulations, and present a great many points, from which different views may be taken, highly picturesque and beautiful; the falls of the river which descends more than six miles; the island; the town of Manchester, connected by two bridges with Richmond; the rich plantations adjoining the town, the river winding and stretching below to a great extent, the wavering hills on its north side, and the valley through which Shokoe creek passes, are the principal objects on which the eye fixes, and from every eminence they are seen in some new form, and under some new colouring of light and shade, the whole presenting the three great requisites of landscape, viz. grandeur, beauty, and variety—besides, Richmond is one of the healthiest cities in the United States, or perhaps in the world, the annual amount of deaths on an average, is one in *eighty-five*; it has never been visited by Yellow fever, or any violent and desolating disease.

Rome, celebrated city of Italy, in Campagna di Roma, and the capital of the Pope's dominions. It is situated on the Tiber, over which it has four bridges. The walls are of brick, in which are 15 gates; and its whole circumference, including that part beyond the Tiber and all belonging to the Vatican, is upwards of 16 miles. It is computed to contain 170,000 inhabitants, which, though greatly inferior to what it could boast in the days of its ancient power, is considerably more than it could number at some former periods since the fall of the empire. Some of the principal streets are of considerable length, and perfectly straight. That called the Corso is the most frequented. The shops on each side are three or four feet higher than the street; and there is a path for foot passengers, on a level with the shops. The palaces, of which there are several in this street, range in a line with the houses, have no courts before them. The Strada Felice, and the Strada di Porta Pia, are also very long and noble streets. There are no lamps lighted in the streets at night; and all Rome would be in utter darkness, were it not for the candles which the devotion of individuals sometimes places before the statues of the Virgin: these appear glimmering.

at vast intervals, like stars in a cloudy night. Rome exhibits a strange mixture of magnificent and interesting, and of common and beggarly objects; the former consists of palaces, churches, fountains, and the remains of antiquity; the latter comprehend all the rest of the city. The church of St. Peter, in the opinion of many, surpasses, in size and magnificence, the finest monuments of ancient architecture. It was begun to be built in 1506, finished in 1621, and is entirely covered both within and without with marble. Its length is 730 feet, the breadth 520, and the height, from the pavement to the top of the cross, which crowns the cupola, 450. The high altar under the cupola is 90 feet in height, and of extraordinary magnificence. A complete description of this church, and of its statues, basso-relievos, columns, and various other ornaments, would fill volumes. The cathedral of St. John Lateran, the Romans say, is the most ancient of all the churches of Rome, and the mother of all the churches in Christendom. It contains the Scala Santa, of 28 white marble steps, brought from Jerusalem, by which Christ is said to have ascended to the palace of Cai, has. To this church every new pope constantly goes first, in a magnificent procession, to take possession of the holy see. The Pantheon is the most perfect of the Roman temples which now remain, and notwithstanding the depredation it has sustained from Goths, Vandals, and popes, is still a beautiful monument of Roman taste. The pavilion of the great altar of St. Peter, and the four wreathed pillars of Corinthian brass which support it, were formed out of the spoils of the Pantheon, which, after, 1900 years, has still a probability of outliving its proud capacious rival. The Pantheon, originally erected to the honour of all the gods, is now become a christian temple, dedicated to the Virgin, and has obtained, from its circular form, the name of the Rotondo. Its height is 150 feet, and its width nearly the same. There are no pillars to support the roof, which is constructed in the manner of a cupola; neither has it any windows, a sufficiency of light being admitted through a central opening in the dome. As the Pantheon is the most entire, the amphitheatre of Vespasian is the most stupendous monument of antiquity in Rome. About one half of the external circuit still remains; from which a pretty exact idea may be formed of the original structure, and by computation it could contain 85,000 spectators. But the antiquities of Rome

are too numerous to be minutely described; that the ancient Forum, now a *cow market*; the beautiful column of Trajan, &c. must be passed over. The Campidoglio, built by Michael Angelo, is a beautiful structure, standing on the site of the ancient Capitol, so long the centre of the empire of the world. The body of this place is the residence of the senators of Rome, and the wings are inhabited by the *conservatores* of the city. The pope has three superb palaces, of which the principal is the Vatican, near St. Peter's church. The library of this palace is the largest and most complete in the world; rich, especially in manuscripts, in all languages and of all ages. In Rome the connoisseur will meet with innumerable paintings by the greatest master, and with the finest works of sculpture, &c. Beside the university, which consists of several noble colleges, there are numerous academies and literary societies. The castle of St. Angelo serves more to keep the city in awe, than to repel any foreign attack. Rome was formerly the metropolis of one of the greatest empires that has ever existed, and may be regarded as the parent of all the cities, the arts, and states of modern Europe. The ancient Romans were governed by seven kings, for about 250 years. During the next 488 years they were governed by consuls, tribunes, decemvirs, and dictators in their turn. They were afterwards governed by 60 emperors, for the space of 518 years. Their wars with the Carthaginians, Spaniards, Gauls, Mithridates of Pontus, Parthians, and Jews, were the most noted. The Roman empire was afterwards much distracted by various commotions, and in 410, Rome was taken and burnt. In May, 1527, Rome was invested by the army of the emperor Charles V.; and the general, to prevent a mutiny, promised to enrich them with the spoils of this opulent city. The general, however, was himself killed, as he was planting a scaling ladder against the walls; but his soldiers, not discouraged by his death, mounted to the assault with the utmost valour, and entering the city, exercised all those brutalities that may be expected from ferocity aggravated by resistance. In the wars which attended the French revolution, Rome was again a considerable sufferer. Large contributions, and severe military exactions were drawn from the inhabitants; and a great number of the most valuable statues and paintings were sent off to Paris. Rome is 110 miles NW of Naples, 410 SSW of

Vienna, and 600 SE of Paris. Lon. 12 29 E, lat. 41 54 N.
